

The reporting of evidence of certain animal diseases is a requirement under the Standards for Accreditation of Veterinarians in Tennessee and all other states. These diseases must be reported to the State Veterinarian or USDA APHIS VS Area Veterinarian in Charge. It is the professional responsibility of the veterinarian to report these diseases properly and promptly so that appropriate control measures may be instituted. Reportable diseases include all diseases for which control or eradication programs are in effect, and all foreign animal diseases not known to exist in this country. A link to the NLRAD can be found here: National List of Reportable Animal Diseases (usda.gov).

In addition to the evidence of diseases, there are certain conditions that should be reported as soon as possible to the State Veterinarian's office. The State Veterinarian's office is located at Ellington Agricultural Center, 436 Hogan Rd. Porter Bldg., P.O. Box 40627, Nashville, Tennessee 37204. The office phone number is (615) 837-5120. The office e-mail address is <u>animal.health@tn.gov.</u>

	<u>cies:</u> Rabies <u>(Z)</u> Any emerging disease threats	*Note: Diseases marked with (Z) are zoonotic, meaning there is a potential to spread the disease between humans and animals, though risk of zoonotic spread varies
A A	Animal/Cat and Dog Diseases: Rabies (Z) Screwworms (Z) Rabbit Hemorrhagic Disease	Small Animal Conditions > Multiple abortions of unknown etiology > Unusual myiasis or acariasis (flies, mites, ticks, etc.) > High morbidity and/or mortality of unknown etiology
	<u>Diseases</u> Avian Influenza (fowl plague) (<u>Z</u>) Fowl typhoid (<i>Salmonella gallinarum</i>) (Z) Pullorum Disease (<i>Salmonella pullorum</i>) (Z) Velogenic Viscerotropic Newcastle Disease	Avian Conditions > Unusual number of acute deaths > Severe respiratory conditions > Central nervous system conditions > High morbidity and/or mortality of unknown etiology
	Diseases Anthrax (Z) Brucellosis (Z) Rabies (Z) Scabies/mange (psoroptic and sarcoptic) (Z*- note that psoroptic mange mites are host- specific, but there are other types of mange that are zoonotic, so PPE should be used when investigating any scabies incidents) Screwworms (Z) Tuberculosis (Z) Trichomoniasis	 Bovine Conditions Vesicular Conditions Mucosal conditions Hemorrhagic conditions Hemorrhagic conditions Multiple abortions of unknown etiology Central nervous system or undiagnosed encephalitic conditions Severe respiratory conditions Severe respiratory conditions Pox or lumpy skin conditions Unusual myiasis or acariasis (flies, mites, ticks, etc.) High morbidity and/or mortality of unknown etiology

Equipo Disocos	Equipo Conditions
Equine Diseases → Anthrax (Z)	Equine Conditions
 Antinax (2) Equine Infectious Anemia 	Vesicular Diseases
 Piroplasmosis 	Viral Encephalitis
$\Rightarrow \text{ Rabies } (\underline{Z})$	Hemorrhagic conditions
Screwworms (Z)	Multiple abortions of unknown etiology
	Central nervous system or undiagnosed
	encephalitic conditions
	Severe respiratory conditions
	Unusual myiasis or acariasis (flies, mites, ticks,
	etc.)
	High morbidity and/or mortality of unknown etiology
Captive Deer and Elk Diseases	Captive Deer and Elk Conditions
> Anthrax (Z)	Vesicular Conditions
Brucellosis (Z)	Multiple abortions of unknown etiology
Chronic Wasting Disease	Central nervous system or undiagnosed
Rabies (Z)	encephalitic conditions
Screwworms (Z)	 Chronic weight loss of unknown cause
 Tuberculosis (Z) 	 Unusual myiasis or ascariasis (flies, mites, ticks,
	etc.)
	 High morbidity and or mortality of unknown etiology
Porcine Diseases	Porcine Conditions
Porcine Diseases > African Swine Fever	Porcine Conditions > Vesicular Diseases
African Swine Fever	 Vesicular Diseases
 African Swine Fever Anthrax (Z) 	 Vesicular Diseases Hemorrhagic conditions
 African Swine Fever Anthrax (Z) 	 Vesicular Diseases Hemorrhagic conditions
 African Swine Fever Anthrax (Z) Brucellosis (Z) 	 Vesicular Diseases Hemorrhagic conditions Multiple abortions of unknown etiology
 African Swine Fever Anthrax (Z) Brucellosis (Z) Classical Swine Fever (Hog Cholera) 	 Vesicular Diseases Hemorrhagic conditions Multiple abortions of unknown etiology Central nervous system or undiagnosed
 African Swine Fever Anthrax (Z) Brucellosis (Z) Classical Swine Fever (Hog Cholera) Pseudorabies 	 Vesicular Diseases Hemorrhagic conditions Multiple abortions of unknown etiology Central nervous system or undiagnosed encephalitic conditions
 African Swine Fever Anthrax (Z) Brucellosis (Z) Classical Swine Fever (Hog Cholera) Pseudorabies Rabies (Z) 	 Vesicular Diseases Hemorrhagic conditions Multiple abortions of unknown etiology Central nervous system or undiagnosed encephalitic conditions Severe respiratory conditions
 African Swine Fever Anthrax (Z) Brucellosis (Z) Classical Swine Fever (Hog Cholera) Pseudorabies Rabies (Z) 	 Vesicular Diseases Hemorrhagic conditions Multiple abortions of unknown etiology Central nervous system or undiagnosed encephalitic conditions Severe respiratory conditions Unusual myiasis or ascariasis (flies, mites, ticks,
 African Swine Fever Anthrax (Z) Brucellosis (Z) Classical Swine Fever (Hog Cholera) Pseudorabies Rabies (Z) Screwworms (Z) 	 Vesicular Diseases Hemorrhagic conditions Multiple abortions of unknown etiology Central nervous system or undiagnosed encephalitic conditions Severe respiratory conditions Unusual myiasis or ascariasis (flies, mites, ticks, etc.) High morbidity and/or mortality of unknown etiology
 African Swine Fever Anthrax (Z) Brucellosis (Z) Classical Swine Fever (Hog Cholera) Pseudorabies Rabies (Z) Screwworms (Z) Sheep and Goat Diseases	 Vesicular Diseases Hemorrhagic conditions Multiple abortions of unknown etiology Central nervous system or undiagnosed encephalitic conditions Severe respiratory conditions Unusual myiasis or ascariasis (flies, mites, ticks, etc.) High morbidity and/or mortality of unknown etiology
 African Swine Fever Anthrax (Z) Brucellosis (Z) Classical Swine Fever (Hog Cholera) Pseudorabies Rabies (Z) Screwworms (Z) Sheep and Goat Diseases Anthrax (Z) 	 Vesicular Diseases Hemorrhagic conditions Multiple abortions of unknown etiology Central nervous system or undiagnosed encephalitic conditions Severe respiratory conditions Unusual myiasis or ascariasis (flies, mites, ticks, etc.) High morbidity and/or mortality of unknown etiology Sheep and Goat Conditions Vesicular Diseases
 African Swine Fever Anthrax (Z) Brucellosis (Z) Classical Swine Fever (Hog Cholera) Pseudorabies Rabies (Z) Screwworms (Z) Sheep and Goat Diseases Anthrax (Z) Brucellosis (Z) 	 Vesicular Diseases Hemorrhagic conditions Multiple abortions of unknown etiology Central nervous system or undiagnosed encephalitic conditions Severe respiratory conditions Unusual myiasis or ascariasis (flies, mites, ticks, etc.) High morbidity and/or mortality of unknown etiology Sheep and Goat Conditions Vesicular Diseases Mucosal conditions
 African Swine Fever Anthrax (Z) Brucellosis (Z) Classical Swine Fever (Hog Cholera) Pseudorabies Rabies (Z) Screwworms (Z) Sheep and Goat Diseases Anthrax (Z) Brucellosis (Z) Bluetongue 	 Vesicular Diseases Hemorrhagic conditions Multiple abortions of unknown etiology Central nervous system or undiagnosed encephalitic conditions Severe respiratory conditions Unusual myiasis or ascariasis (flies, mites, ticks, etc.) High morbidity and/or mortality of unknown etiology Sheep and Goat Conditions Vesicular Diseases Mucosal conditions Hemorrhagic conditions
 African Swine Fever Anthrax (Z) Brucellosis (Z) Classical Swine Fever (Hog Cholera) Pseudorabies Rabies (Z) Screwworms (Z) Steep and Goat Diseases Anthrax (Z) Brucellosis (Z) Bluetongue Rabies (Z) 	 Vesicular Diseases Hemorrhagic conditions Multiple abortions of unknown etiology Central nervous system or undiagnosed encephalitic conditions Severe respiratory conditions Unusual myiasis or ascariasis (flies, mites, ticks, etc.) High morbidity and/or mortality of unknown etiology Sheep and Goat Conditions Vesicular Diseases Mucosal conditions Hemorrhagic conditions Multiple abortions of unknown etiology
 African Swine Fever Anthrax (Z) Brucellosis (Z) Classical Swine Fever (Hog Cholera) Pseudorabies Rabies (Z) Screwworms (Z) Steep and Goat Diseases Anthrax (Z) Brucellosis (Z) Bluetongue Rabies (Z) Scabies/mange (Z*-note that psoroptic mange 	 Vesicular Diseases Hemorrhagic conditions Multiple abortions of unknown etiology Central nervous system or undiagnosed encephalitic conditions Severe respiratory conditions Unusual myiasis or ascariasis (flies, mites, ticks, etc.) High morbidity and/or mortality of unknown etiology Sheep and Goat Conditions Vesicular Diseases Mucosal conditions Hemorrhagic conditions Multiple abortions of unknown etiology Central nervous system of undiagnosed
