I. Introduction

Purpose

Aon Global Risk Consulting (“AGRC”) has prepared this report for Tennessee Workers Compensation Insurance Plan (hereinafter referred to as, “TWCIP”) at the request of Tom Redel, Aon Risk Solutions – Kansas City. The purpose of this report is to provide assistance to the TWCIP in evaluating its unpaid retained loss liability as of 6/30/15, for losses incurred from 1/1/98 through 6/30/15, on insurance policies written by the plan during calendar years 1998 through 2015. The report is also intended to provide assistance to the management of TWCIP in setting appropriate reserve levels and for submission to TWCIP’s auditors.

Scope

The scope of the actuarial report is defined as follows:

Ultimate loss and allocated loss adjustment expense estimation and outstanding balance estimation for workers compensation for TWCIP for each of policy years 1998 through 2015.

The unpaid loss estimates presented in this report are actuarial central estimates (i.e., expected values over a range of reasonably possible outcomes). Our unpaid claim estimates are presented on an undiscounted basis. As used throughout this report, the term “loss” is meant to include both indemnity and ALAE, net of applicable insurance recoveries. We have performed no additional work to verify the financial condition of the assuming reinsurance companies.

This analysis is based on data evaluated as of June 30, 2015, and on information provided to us as of September 5, 2015.

We have not considered catastrophic events in our estimates of the liabilities.

* * * * *

Andre Nguyen and Jonathan Shampo are members of the Casualty Actuarial Society and of the American Academy of Actuaries, and meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinion contained herein.

We performed this analysis using generally accepted actuarial principles and in accordance with all relevant Actuarial Standards of Practice.

Please contact us if you have any questions regarding this report.

Respectfully submitted,

Aon Global Risk Consulting

II. Conditions and Limitations

Inherent Uncertainty

Actuarial calculations produce estimates of inherently uncertain future contingent events. We believe that the estimates provided represent reasonable provisions based on the appropriate application of actuarial techniques to the available data. However, there is no guarantee that actual future payments will not differ from estimates included herein.

Extraordinary Future Emergence

Our projections make no provision for the extraordinary future emergence of losses or types of losses not sufficiently represented in the historical data or which are not yet quantifiable.

Data Reliance

In conducting this analysis, we relied upon the provided data without audit or independent verification; however, we reviewed it for reasonableness and consistency. Any inaccuracies in quantitative data or qualitative representations could have a significant effect on the results of our review and analysis.

Use and Distribution

Use of this report is limited to TWCIP for the specific purpose described in the Introduction section. Other uses are prohibited without an executed release with Aon.

We recognize that this report may be distributed to Auditors and appropriate governmental agencies. We request that Aon be notified of further distribution of this report. The report should only be distributed in its entirety including all supporting exhibits.

III. Executive Summary

Summary of Results

Policy Year 1998

The total ultimate loss and ALAE, total ultimate loss and ALAE ratio, combined ratio, and reserve estimates for the exposure of TWCIP, for policy year 1998 as of 6/30/15 are as follows:

	Minimum	Maximum	Selected
Ultimate Loss and ALAE	16,124,806	16,173,169	16,129,000
Ultimate Loss and ALAE Ratio	92.2%	92.4%	92.2%
Combined Ratio	122.7%	123.0%	122.7%
Reserve Estimate	133,182	181,545	137,376

Policy Year 1999

The total ultimate loss and ALAE, total ultimate loss and ALAE ratio, combined ratio, and reserve estimates for the exposure of TWCIP, for policy year 1999 as of 6/30/15 are as follows:

	Minimum	Maximum	Selected
Ultimate Loss and ALAE	10,608,855	13,635,412	12,084,000
Ultimate Loss and ALAE Ratio	87.7%	112.8%	99.9%
Combined Ratio	114.1%	139.2%	126.3%
Reserve Estimate	169,386	3,195,943	1,644,531

Policy Year 2000

The total ultimate loss and ALAE, total ultimate loss and ALAE ratio, combined ratio, and reserve estimates for the exposure of TWCIP, for policy year 2000 as of 6/30/15 are as follows:

	Minimum	Maximum	Selected
Ultimate Loss and ALAE	21,103,143	21,189,836	21,164,000
Ultimate Loss and ALAE Ratio	87.2%	87.6%	87.5%
Combined Ratio	113.0%	113.4%	113.2%
Reserve Estimate	311,911	398,604	372,769

Policy Year 2001

The total ultimate loss and ALAE, total ultimate loss and ALAE ratio, combined ratio, and reserve estimates for the exposure of TWCIP, for policy year 2001 as of 6/30/15 are as follows:

	Minimum	Maximum	Selected
Ultimate Loss and ALAE	26,721,917	26,789,812	26,763,000
Ultimate Loss and ALAE Ratio	65.7%	65.8%	65.8%
Combined Ratio	92.8%	93.0%	92.9%
Reserve Estimate	607,218	675,113	648,301

Policy Year 2002

The total ultimate loss and ALAE, total ultimate loss and ALAE ratio, combined ratio, and reserve estimates for the exposure of TWCIP, for policy year 2002 as of 6/30/15 are as follows:

	Minimum	Maximum	Selected
Ultimate Loss and ALAE	42,113,030	47,104,877	43,912,000
Ultimate Loss and ALAE Ratio	62.6%	70.0%	65.3%
Combined Ratio	89.0%	96.4%	91.7%
Reserve Estimate	1,319,021	6,310,868	3,117,991

Policy Year 2003

The total ultimate loss and ALAE, total ultimate loss and ALAE ratio, combined ratio, and reserve estimates for the exposure of TWCIP, for policy year 2003 as of 6/30/15 are as follows:

	Minimum	Maximum	Selected
Ultimate Loss and ALAE	44,087,737	49,415,967	46,083,000
Ultimate Loss and ALAE Ratio	56.9%	63.8%	59.5%
Combined Ratio	86.0%	92.9%	88.6%
Reserve Estimate	1,655,142	6,983,372	3,650,405

Policy Year 2004

The total ultimate loss and ALAE, total ultimate loss and ALAE ratio, combined ratio, and reserve estimates for the exposure of TWCIP, for policy year 2004 as of 6/30/15 are as follows:

	Minimum	Maximum	Selected
Ultimate Loss and ALAE	37,322,926	42,581,410	39,398,000
Ultimate Loss and ALAE Ratio	51.6%	58.9%	54.5%
Combined Ratio	81.5%	88.8%	84.4%
Reserve Estimate	1,739,213	6,997,698	3,814,288

Policy Year 2005

The total ultimate loss and ALAE, total ultimate loss and ALAE ratio, combined ratio, and reserve estimates for the exposure of TWCIP, for policy year 2005 as of 6/30/15 are as follows:

	Minimum	Maximum	Selected
Ultimate Loss and ALAE	28,840,338	35,199,691	31,938,000
Ultimate Loss and ALAE Ratio	47.8%	58.3%	52.9%
Combined Ratio	82.7%	93.2%	87.8%
Reserve Estimate	1,536,162	7,895,515	4,633,824

Policy Year 2006

The total ultimate loss and ALAE, total ultimate loss and ALAE ratio, combined ratio, and reserve estimates for the exposure of TWCIP, for policy year 2006 as of 6/30/15 are as follows:

	Minimum	Maximum	Selected
Ultimate Loss and ALAE	22,262,104	22,915,300	22,550,000
Ultimate Loss and ALAE Ratio	45.2%	46.5%	45.8%
Combined Ratio	76.8%	78.1%	77.4%
Reserve Estimate	1,353,766	2,006,962	1,641,662

Policy Year 2007

The total ultimate loss and ALAE, total ultimate loss and ALAE ratio, combined ratio, and reserve estimates for the exposure of TWCIP, for policy year 2007 as of 6/30/15 are as follows:

	Minimum	Maximum	Selected
Ultimate Loss and ALAE	15,894,470	19,061,304	17,681,000
Ultimate Loss and ALAE Ratio	54.2%	65.0%	60.3%
Combined Ratio	80.1%	90.9%	86.2%
Reserve Estimate	1,165,869	4,332,703	2,952,399

Policy Year 2008

The total ultimate loss and ALAE, total ultimate loss and ALAE ratio, combined ratio, and reserve estimates for the exposure of TWCIP, for policy year 2008 as of 6/30/15 are as follows:

	Minimum	Maximum	Selected
Ultimate Loss and ALAE	12,506,747	12,742,283	12,560,000
Ultimate Loss and ALAE Ratio	58.2%	59.3%	58.4%
Combined Ratio	83.8%	84.9%	84.1%
Reserve Estimate	1,140,541	1,376,077	1,193,794

Policy Year 2009

The total ultimate loss and ALAE, total ultimate loss and ALAE ratio, combined ratio, and reserve estimates for the exposure of TWCIP, for policy year 2009 as of 6/30/15 are as follows:

	Minimum	Maximum	Selected
Ultimate Loss and ALAE	15,268,522	22,335,932	18,212,000
Ultimate Loss and ALAE Ratio	71.3%	104.3%	85.1%
Combined Ratio	104.8%	137.8%	118.6%
Reserve Estimate	1,827,925	8,895,334	4,771,403

Policy Year 2010

The total ultimate loss and ALAE, total ultimate loss and ALAE ratio, combined ratio, and reserve estimates for the exposure of TWCIP, for policy year 2010 as of 6/30/15 are as follows:

	Minimum	Maximum	Selected
Ultimate Loss and ALAE	21,928,488	41,544,833	29,333,000
Ultimate Loss and ALAE Ratio	95.0%	180.0%	127.1%
Combined Ratio	123.2%	208.2%	155.3%
Reserve Estimate	3,386,649	23,002,994	10,791,161

Policy Year 2011

The total ultimate loss and ALAE, total ultimate loss and ALAE ratio, combined ratio, and reserve estimates for the exposure of TWCIP, for policy year 2011 as of 6/30/15 are as follows:

	Minimum	Maximum	Selected
Ultimate Loss and ALAE	16,998,550	23,328,544	19,208,000
Ultimate Loss and ALAE Ratio	57.9%	79.5%	65.4%
Combined Ratio	82.7%	104.3%	90.2%
Reserve Estimate	3,067,287	9,397,282	5,276,738

Policy Year 2012

The total ultimate loss and ALAE, total ultimate loss and ALAE ratio, combined ratio, and reserve estimates for the exposure of TWCIP, for policy year 2012 as of 6/30/15 are as follows:

	Minimum	Maximum	Selected
Ultimate Loss and ALAE	19,601,790	20,976,891	20,784,000
Ultimate Loss and ALAE Ratio	48.8%	52.2%	51.8%
Combined Ratio	73.1%	76.5%	76.1%
Reserve Estimate	4,757,794	6,132,895	5,940,004

Policy Year 2013

The total ultimate loss and ALAE, total ultimate loss and ALAE ratio, combined ratio, and reserve estimates for the exposure of TWCIP, for policy year 2013 as of 6/30/15 are as follows:

	Minimum	Maximum	Selected
Ultimate Loss and ALAE	23,970,487	24,247,517	24,121,000
Ultimate Loss and ALAE Ratio	51.2%	51.8%	51.5%
Combined Ratio	75.6%	76.2%	75.9%
Reserve Estimate	9,194,749	9,471,779	9,345,262

Policy Year 2014

The total ultimate loss and ALAE, total ultimate loss and ALAE ratio, combined ratio, and reserve estimates for the exposure of TWCIP, for policy year 2014 as of 6/30/15 are as follows:

	Minimum	Maximum	Selected
Ultimate Loss and ALAE	24,769,603	28,984,625	27,514,000
Ultimate Loss and ALAE Ratio	66.0%	77.2%	73.3%
Combined Ratio	92.3%	103.5%	99.6%
Reserve Estimate	16,186,038	20,401,060	18,930,435

Policy Year 2015

The total ultimate loss and ALAE, total ultimate loss and ALAE ratio, combined ratio, and reserve estimates for the exposure of TWCIP, for policy year 2015 as of 6/30/15 are as follows:

	Minimum	Maximum	Selected
Ultimate Loss and ALAE	4,546,776	3,220,633	3,788,980
Ultimate Loss and ALAE Ratio	81.7%	57.9%	68.1%
Combined Ratio	96.0%	72.2%	82.4%
Reserve Estimate	2,817,026	4,143,169	3,385,373

The minimum and maximum projected ultimate losses are not best and worst case scenarios; they simply represent the range of estimates arrived at via various actuarial methods. These estimates are based on our assumptions about loss development for this program; different assumptions may result in a different range being indicated. The low end of the range is essentially an optimistic estimate, and the high end is

a pessimistic estimate. In terms of what is an “actuarially reasonable” estimate, the **selected** values of the reserve estimates correspond an actuarial central estimate, and a small deviation around this value (e.g. +/- 5% or +/- 10%) would generally be considered to be an actuarially reasonable range.

The ultimate loss values contained in this report have not been supplemented by safety loadings as a precaution against the fluctuation of results. We have not undertaken a variability analysis, that is: an estimate of the likelihood that the aggregate losses will reach some level above the expected values shown here.

It must be emphasized that the selected ultimate loss and / or ALAE amounts contained in this analysis are expected value figures. These estimates will undoubtedly change over time due to the statistical variability inherent in the claims settlement process. While no guarantees can be made, it is believed that these estimates represent reasonable conclusions based upon sound actuarial considerations.

Observations/Findings

Overall, for the 1998 through 2014 policy years, our selected ultimate loss projections have increased by about \$207,000 compared to our estimates as of 3/31/15. This is estimated by multiplying the change in the selected ultimate loss ratio by the earned premium as of 6/30/15, by policy year.

We offer the following observations for policy years for which the ultimate losses changed by more than \$200,000 and the change in the ultimate losses was at least 5% of the prior reserve:

For Policy Year 2002, ultimate losses decreased from \$44,212,000 to \$43,912,000. This was mainly due to a decrease in incurred losses from \$6,150,123 to \$5,878,375 for a claim that occurred on 3/13/02.

For Policy Year 2005, ultimate losses increased from \$31,469,000 to \$31,938,000. This was mainly due to an increase in incurred losses from \$394,547 to \$735,418 for a claim that occurred on 8/10/05.

For Policy Year 2010, ultimate losses increased from \$27,891,000 to \$29,333,000. This was due to greater than expected development of incurred losses from 3/31/15 to 6/30/15.

For Policy Year 2012, ultimate losses increased from \$19,573,000 to \$20,784,000. This was due to greater than expected development of incurred losses from 3/31/15 to 6/30/15.

For Policy Year 2013, ultimate losses decreased from \$24,497,000 to \$24,121,000. This was due to less than expected development of incurred losses from 3/31/15 to 6/30/15.

For Policy Year 2015, the minimum and maximum ultimate loss estimates are derived by multiplying the selected ultimate loss by .85 and 1.20, respectively. By doing this, we are providing a reasonable range around the selected ultimate loss. We have not estimated the confidence levels pertaining to this range.

IV. Program Description

We have projected losses on an unlimited basis for each of policy years 1998 through 2015.

V. Data

Loss experience, written premiums, and underwriting expenses and fees have been based on data supplied by Liberty Mutual Insurance Company, Berkeley Risk Administrators, Hartford Insurance Company, Employers Insurance of Wausau, and Companion Property and Casualty Group. This data has not been independently audited or verified by Aon Global Risk Consulting. The scope of this analysis includes losses, allocated loss adjustment expenses (ALAE), and underwriting expenses and fees. Aon reviewed the data for reasonableness and consistency, although no audit of the data was performed. If the data provided is inaccurate or incorrect, material differences can arise from what is presented here.

Losses include allocated loss adjustment expense, and henceforth in this report, any reference to losses should be understood to mean claims payments and reserves plus such expense.

Premium data was provided by Aon Risk Solutions.

We have supplemented this data with the following:

- Insurance Industry loss development data for the State of Tennessee

VI. Actuarial Analysis

Overview

Aon has employed generally accepted actuarial methodologies in estimating TWCIP's outstanding loss and ALAE liabilities as of the loss evaluation date for Workers' Compensation. The methodologies employed included the following:

- Incurred Loss Development
- Paid Loss Development
- Case Reserve (Outstanding) Development
- Paid Cape Cod
- Incurred Cape Cod

Incurred Loss Development Method

The Incurred Loss Development Method estimates ultimate losses by applying incurred loss development factors to incurred losses in policy periods in which there is further expected incurred development. This method incorporates a larger amount of data than the Paid Loss Development Method because incurred loss includes estimated payments and loss reserves. Incurred loss patterns may be more stable than paid loss patterns. This method operates under the assumption that consistent practices have been employed in setting reserves over a historical policy period. Any changes in reserving methods may cause results to be more volatile.

Paid Loss Development Method

The Paid Loss Development Method estimates ultimate losses by applying paid loss development factors to paid losses in policy periods in which there is further expected paid development. This method operates under the assumption that losses are paid at a consistent rate based on the policy period age. Paid losses contain only known dollars and do not contain reserve estimates. Compared with incurred losses, paid losses are not as affected by changes in reserving policies. However, paid losses for younger policy periods may be too green to be used for accurate predictions. Significant payments made in early stages of development or new settlement patterns may cause ultimate predictions to become erratic.

Case Reserve (Outstanding) Loss Development Method

In the Case Reserve Development Method, a case reserve loss development factor is calculated based on the paid and incurred loss development factors (LDFs). Multiplying this factor with the case reserves for a policy period adjusts the reserve to a total level including IBNR. Ultimate losses are then estimated by adding paid losses to the developed reserve. This method is particularly useful for older policy periods where less development is expected and estimated reserve amounts are likely more accurate. However, reserve amounts for younger policy periods may be too volatile to use for accurate predictions. Any changes in case reserving practices can also cause results to be erratic. This method is more effective in estimating “case development” IBNR, but is less effective in estimating the component of IBNR associated with unreported claims.

Paid Cape Cod Method

This method calculates the total unpaid amount based on an expected total loss amount and an assumed percentage unpaid based on the paid LDFs.

Incurred Cape Cod Method

This method calculates the total unreported amount based on an expected total loss amount and an assumed percentage unreported based on the incurred LDFs.

Actuarial Assumptions

The Casualty Actuarial Society Statement of Principles Regarding Property and Casualty Loss and Loss Adjustment Expense Liabilities provide a list of items that should be considered in evaluating the accuracy of ultimate loss costs. These considerations have been included in the analysis of TWCIP's experience in the following manner:

1. Homogeneity

Loss reserving accuracy may be improved by subdividing loss experience into groups exhibiting similar characteristics. The workers compensation claims for TWCIP, by policy year, were the sole consideration of this report. The data was not divided into any further subdivision.

2. Credibility

Credibility is a measure of the predictive value attached to a sample of data. The degree to which consideration is given to the homogeneity is related to the consideration of credibility. While making more homogeneous groupings may increase credibility of the data, partitioning into cells too small to be reliable statistically may also decrease it.

3. Data Availability

Loss experience data has been based on loss data supplied by Liberty Mutual Insurance Company, Berkeley Risk Administrators, Hartford Insurance Company, Employers Insurance of Wausau, and Companion Property and Casualty Group. This data has not been independently audited or verified by the Aon Group. The scope of this analysis includes allocated loss adjustment expense (ALAE), and henceforth in this report, any reference to losses should be understood to mean claims payments and reserves plus such expense. Any material discrepancies discovered in the loss data by TWCIP or any other parties should be reported to us immediately, and if warranted, we will make appropriate amendments to the report.

4. Emergence Pattern

Loss emergence patterns for this program were developed based on TWCIP experience and NCCI data. Tail development factors beyond 168 months were derived via extrapolation of the link factors fitted to an inverse power curve. The loss projections in this analysis assume that future emergence of losses in this program will be similar to that of the past. The actual future development of losses may differ significantly from what is predicted using these development factors.

5. Claims-Made

Such coverage is triggered by the reporting of claims rather than by the occurrence of claims. All coverage has been treated as occurrence-based.

6. Loss Limitations

For the purposes of this report, losses are limited as described in the “Program Description” section.

7. Collateral Sources

The impact of any salvage and subrogation would be included in the calculation of loss development factors, which have been based upon losses net of recovered items. No specific collateral sources for recovery such as coordination of benefits programs or second injury funds have been communicated to Aon Global Risk Consulting. The loss data provided is assumed to be net of any such recoveries.

8. Operational Changes

It has been assumed that the general practices followed for paying and reserving claims for TWCIP will not be materially different from general insurance industry practices. In addition, we are assuming that the general operations of TWCIP in terms of overall level of risk are relatively constant over the period of this analysis.

9. External Influences

Inflationary trend factors used in this analysis are based on countrywide loss and exposure cost indices by line of coverage, compiled by the NCCI and the Bureau of Labor Statistics.

10. Discounting

Since the financial liability for casualty claims that have occurred may not be paid out for many years, the investment income potential on liability reserves may be recognized. No discounted outstanding liabilities have been included in this report.

11. Provision for Uncertainty

Ultimate loss costs are estimates and as such a degree of uncertainty is inherent. In this report no specific additional provisions have been included in the estimates of loss costs for uncertainty.

12. Loss Reserving Methods

All methods used in this report to estimate ultimate loss costs are standard actuarial techniques. A detailed discussion of the terminology and methods employed in this report are in the section entitled "Analysis".

VII. Description of Exhibits

The steps involved in the projection of ultimate losses are performed in the exhibits, which follow. Footnotes in the exhibits indicate the formulas and the sources of values used in the analysis. The following is a discussion of exhibits for policy year 1998. The exhibits for the other policy years generally parallel the exhibits for policy year 1998.

Exhibit 1 shows minimum, maximum and selected estimates of ultimate losses, loss ratios, and combined ratios. This exhibit also shows written premiums, earned premiums, and underwriting expenses and fees.

Exhibit 2 contains the projected total ultimate losses, total paid to date, total case incurred (reported) and the total reserve broken out into case reserves and IBNR, as of 6/30/15 based on minimum, maximum, and actuarial central estimate projections.

Exhibit 3 contains the incurred and paid loss projection methods as well as the case reserve development method.

Exhibit 4 shows the incurred and paid Bornhuetter-Ferguson projection methods.

Appendices 1 - 4 show the loss development triangles and the derivation of the loss development factor (LDF) selections based on TWCIP's historical emergence patterns and emergence patterns based on NCCI data for case incurred and paid losses for both medical and indemnity losses.
