

Congestion Mitigation and Air Quality Improvement (CMAQ)

This initiative will expand opportunities for ridesharing and transit by adding park and ride facilities serving commuters. Park and ride lots improve air quality because they help commuters use these transportation alternatives.

- Park and Ride lots have the ability to:
 - Reduce individual trip costs
 - Reduce the number of trips made by single occupant vehicles
 - Reduce peak demand on roadways and parking
- Applicants for funding for new or expanded park and ride facilities will need to provide the following information:
 - The local need and use for park and ride facilities
 - Possible locations (existing publicly owned land preferred, not required)
 - 20% local match
