

## Modified Stage 2 Objective 7: Medication Reconciliation

**Objective:** The EP who receives a patient from another setting of care or provider of care or believes an encounter is relevant performs medication reconciliation.

**Measure:** The EP performs medication reconciliation for **more than 50** percent of transitions of care in which the patient is transitioned into the care of the EP.

**Exclusion:**

Any EP who was not the recipient of any transitions of care during the EHR reporting period.

[CMS Specification Sheet](#)

**TennCare Notes** - This objective and measure aligns with Menu Measure 6 in Stage 1 Meaningful Use. There are no changes to the objective or measure beyond the transition from the menu to the core set.

Medication reconciliation allows providers to confirm the information they have on the patient's medication list is accurate. This not only assists the provider in his or her direct patient care, it also improves the accuracy of the information they provide to others through health information exchange.

For this measure, medication reconciliation can be defined as the process of identifying the most accurate list of all medications that the patient is taking, including name, dosage, frequency, and route, by comparing the medical record to an external list of medications obtained from a patient, hospital or other provider.
