

**TENNESSEE**  
**COUNTY-BY-COUNTY**  
**2020**

Dear Reader:

The Tennessee Commission on Aging and Disability (“TCAD”) is pleased to present the 2019 edition of The State of Aging in Tennessee: A County-by-County Snapshot. This report includes county-by-county data on issues affecting older adults in Tennessee. TCAD’s core function is to protect and ensure the quality of life and independence of older Tennesseans and adults with disabilities. The agency pursues data-driven advocacy of policies and programs that improve outcomes for those specific groups while providing assistance to concerned families and caregivers. In this specific report about aging, each data page presents county-level data specific to older adults. Each page also includes the projected population growth of older adults in that county over the next fifteen years. In addition, this year’s report includes the same county-level information on a statewide basis. We hope this can be used as a tool to gauge your county’s strengths and challenges. Strengths prove successful to the promotion of health and wellness, while challenges are opportunities for improvement. Supporting a call to action, the County-by-County Snapshot shows what we can do to create healthier counties for older adults. The data presented in this report will also be available on TCAD’s website ([www.tn.gov/aging](http://www.tn.gov/aging)), allowing it to be shared by service providers, advocates, and decision-makers across the state. Our population is getting older in Tennessee. We face existing challenges today and will have new ones in the future. This report is a tool designed to give you an idea of what is happening in Tennessee. With your help and the help of our partners, TCAD will continue its efforts to make significant strides in this important work.

Sincerely,

A handwritten signature in black ink that reads "Jim Shulman". The signature is fluid and cursive, with the first name "Jim" and last name "Shulman" clearly legible.

Jim Shulman, Executive Director

Tennessee Commission on Aging and Disability

## Chronic Conditions

Chronic conditions are those that last more than a year, including physical diseases and mental conditions. Compared with other individuals, those with three or more chronic conditions have higher healthcare costs and live 5.3 fewer years [9]. Lifestyle factors such as tobacco use, insufficient physical activity, poor diet, and excessive alcohol consumption contribute significantly to chronic conditions. Chronic conditions for this measure include Alzheimer’s Disease and related dementia, heart failure, arthritis, hepatitis, asthma, HIV/AIDS, atrial fibrillation, high cholesterol, autism spectrum disorder, high blood pressure, cancer, ischemic heart disease, chronic kidney disease, osteoporosis, chronic obstructive pulmonary disease, schizophrenia and other psychotic disorders, depression, stroke, and diabetes.

*Data for this measure are based on enrollment and claims data for Medicare fee-for-service beneficiaries from 2017 [3].*

## Demographic Data

Demographic contained within this document are used for informational purposes to provide a broad overview of some of the characteristics of our communities’ older adults.

*Data sources include the Boyd Center for Business & Economic Research [1], the Tennessee Comptroller of the Treasury [2], the Centers for Medicaid and Medicare Services [3], and the United States Census Bureau [4, 5, 6, 7, 8]*

## Difficulty Walking

Walking is among the most common forms of physical activity engaged in by older adults, as either a leisure-time pursuit or a part of everyday activities. Difficulty with walking may in turn limit physical activity, leading to a decline in health. In addition, difficulty walking may also reduce an individual’s access to goods, services, social networks, and community activities.

*Data for this measure comes from the 2013-2017 data for the American Community Survey 5-year estimates [11].*

## Grandparents Raising Grandchildren

When parents are absent or unable to raise their children, grandparents are often the ones who step in to help. Many grandparents express that the experience enhances their lives. However, many grandparents also express added stress from supporting their grandchildren, saving for retirement, and maintaining their own health while caring for their grandchild. Given these many factors, at least some grandparents who are responsible for raising their grandchildren are vulnerable mentally and physically, underscoring the importance of empowering them and ensuring access to services and supports when needed.

*Data presented includes the number of grandparents responsible for raising their grandchildren and comes from the 2013-2017 data for the American Community Survey 5-year estimates [10].*

## Housing Cost Burdened

Housing is the single largest expense for older adults. Households that spend more than 30 percent of their income on housing are described as “housing-cost burdened.” Every additional dollar spent on housing costs and utilities takes away money from other needs such as food, health care, and transportation. This measure is an indicator for households that own and does not include renters, as over 80% of older Tennesseans are homeowners, with or without a mortgage. However, renters in this same age group tend to fare worse than owners. Being housing-cost burdened presents a particular problem for older Americans, who are more likely to be struggling to make ends meet.

*Data for this measure comes from the 2013-2017 data for the American Community Survey 5-year estimates [12].*

## Poverty

Many seniors live on limited incomes and modest savings. Many individuals, especially those below the 100% of the federal poverty limit, may struggle with the costs of housing and health care, healthy food, and reliable transportation. Poverty rates among older adults increase with age.

*Data for this measure comes from the 2013-2017 data for the American Community Survey 5-year estimates [5].*
