

# Call Handling as a Service

## PROJECT OVERVIEW

The Call Handling as a Service (Hosted Controller) project provides a scalable call handling solution that interconnects with the State of Tennessee's nationally recognized Next Generation 911 (NG911) network, NetTN. This is an optional service, available to any PSAP wanting to migrate to the solution.

## HOW IT WORKS

The NG911 Internet Protocol selective routers (IPSRs) route a 911 call to the hosted customer premise equipment (CPE) and the hosted CPE then queries ALI and delivers the call and ALI data to the correct PSAP telecommunicator position.

The diagrams below illustrate the difference in configurations between PSAPs with traditional on-site CPE and PSAPs using the Call Handling as a Service solution. With the on-site CPE, all call handling equipment is located in the PSAP; however, with call handling as a service, redundant controllers are located in the AT&T data centers and minimal equipment is needed in the PSAP.

## WHAT IT OFFERS

The AT&T Call Handling as a Service solution is an i3 compliant solution that provides consistency and enables efficiencies for PSAPs that migrate to the service. The CPE equipment is hosted in AT&T data centers and is monitored and maintained as a part of the service.

## WHO IS IMPACTED

The Call Handling as a Service solution is an optional service and is available to any PSAP seeking to migrate from an on-site to a hosted services solution.

## CURRENT STATUS – MAY UPDATES

The number of PSAPs with CHaaS service has increased to 12 with a total of 43 seats. Eight additional PSAPs are planning transition to CHaaS and are working towards deployment.

AT&T and the TECB completed road show meetings in mid-April to discuss the solution and operational questions.

### Call Handling as a Service - Quarterly Statistics

## NEXT STEPS

If interested in the service or would like more information, contact the TECB Director of Technology, Eddie Burchell at 615.210.3807 or [Eddie.Burchell@tn.gov](mailto:Eddie.Burchell@tn.gov).
