

NCCER – Construction Technology

Aligned Programs of Study

- Residential & Commercial Construction
- Mechanical, Electrical, & Plumbing (MEP) Systems
- Structural Systems

Description

National Center for Construction Education & Research (NCCER) certifications are available to students who successfully complete NCCER curriculum through an accredited training sponsor. NCCER, the National Center for Construction Education and Research, develops standardized training and credentialing program for the construction industry. The curriculum is set up in a module format. As students complete a module, an end-of-module exam is given by the instructor. The end-of-module exams are typically written, multiple-choice tests, but many also include a performance test. Instructors report the modules students have successfully completed and NCCER keeps record of the individual modules completed in a national registry. After students have completed all modules in a given level, students received a certificate, wallet card, and transcript.

Construction Technology content includes: Site Layout One-Distance Measurement and Leveling, Introduction to Concrete, Reinforcing Materials, and Forms, Handling and Placing Concrete, Introduction to Masonry, Masonry Units and Installation Techniques, Floor Systems, Wall and Ceiling Framing, Roof Framing, Roofing Applications, Exterior Finishing, Basic Stair Layout, Electrical Safety, Residential Electrical Services, Introduction to HVAC, Introduction to Drain, Waste and Vent Systems, Plastic Pipe and Fittings, and Copper Pipe and Fittings.

Certification Information

Test Owner

National Center for Construction Education and Research (NCCER)

13614 Progress Boulevard

Alachua, FL 32615

Phone: (386) 518-6500

Fax: (386) 514-6303

Testing Sites/Centers

End-of-module exams are given at the school by the instructor.

Registration Procedures

1. Schools should begin by selecting an NCCER authorized training sponsor (ATS). Various construction associations may serve as an ATS. Registration procedures will vary by ATS but certain requirements are dictated by NCCER. A general outline is included in the following steps.
2. The school must become registered as an NCCER accredited training and education facility (ATEF). This involves completing two forms (Form 106 and 105) and paying a fee of around \$50.
3. The instructor must complete the NCCER Instructor Certification Training Program (ICTP) and keep all records as outlined by NCCER guidelines.
4. Within the first year of NCCER approval as an ATEF, the facility must be audited by the ATS. The auditing will be completed every 3 years thereafter. Programs are required to use the NCCER textbook as the primary textbook for the course to be accredited.

5. As students complete modules, the school instructor tracks student progress. Periodically, the school instructor completes a Form 200 making record of student names and the modules they have completed and submits the record to NCCER (or the ATS depending on how the ATS process is set up). NCCER transcripts, certificates, and wallet cards are issued for successful completion of all modules in an NCCER curriculum level.

Preparing to offer the certification

Required Instructor Qualification

The instructor must attend the NCCER Instructor Certification Training Program (ICTP) to obtain the related NCCER instructor certification required to administer the certification process to students.

Accreditation information is available at <https://www.nccer.org/get-involved/organizations/types-of-accreditation>.

Materials and Resources

More information is available online at <http://www.nccer.org/>. Prices vary by authorized training sponsor.

The following NCCER alignment guides are available on the Tennessee Department of Education's [Architecture & Construction](#) website.
