

In autumn 2025, the Tennessee Division of Air Pollution Control (APC) started engaging stakeholders to gather feedback from the public and industry about a potential fee increase for certain Non-Title V permitted air sources (conditional major and true minor sources). Stakeholder engagement for the Non-Title V fee rule will last until December 31, 2025. Below is a summary of the initial feedback collected and how it breaks down:

Potential Fee Element Changes: Stakeholders selected potential fee element changes that they supported and/or those that applied to them.

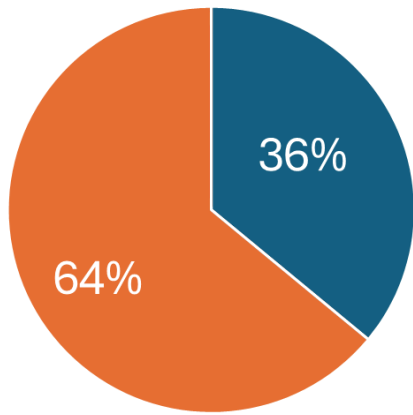

Potential Fee Elements: Stakeholder Feedback

When submitting a construction permit application:

- Maintain graduated fee structure based on the anticipated actual emission rates of the sources being permitted
- A flat fee

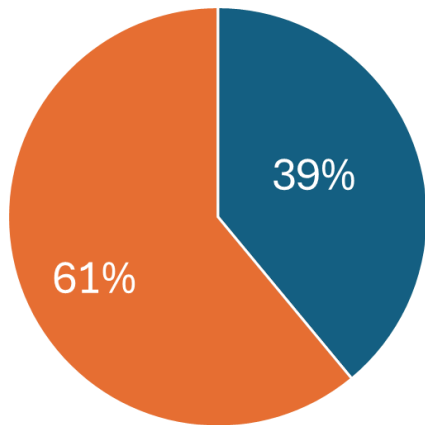

True Minor

Average cost to issue a construction permit for True Minor Source is approximately 5k

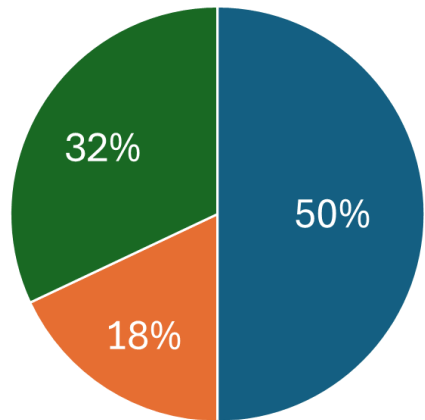

-  The applicant should cover the full cost of issuing a construction permit of \$5,000.
-  The applicant should cover a portion of the cost to issue a construction permit with the remaining costs covered by other non-title V funding sources.

Conditional Major Responses

Average Cost to Issue Conditional Major Construction Permit is Approximately 9k:

-  The applicant should cover the full cost of issuing a construction permit of \$9,000.
-  The applicant should cover a portion of the cost to issue a construction permit with the remaining costs covered by other non-title V funding sources.

Average Cost for Compliance Evaluation Activities for Conditional Major Sources is Approximately 2.1k/year, do you support?

-  Maintaining a graduated fee structure based on total allowable emissions of the total facility
-  Replacing the current graduated fee structure with one based on the number of pollutants for which a facility is a conditional major
-  A flat fee
