

**TENTATIVE AGENDA
STATE OF TENNESSEE
REGULAR MEETING
AIR POLLUTION CONTROL BOARD
Davy Crockett Tower, First Floor
Conference Room 1-B
500 James Robertson Parkway
Nashville, TN 37243-0582
In Person and
Remote Access Via Webex link**

**Wednesday, May 13, 2026
9:30 A.M.**

******Public Comments:** If you wish to speak on topic(s) shown here, please print your name on the Sign-In Sheet provided at the guest table or type your name into the Webex chat box. Someone will recognize you during the meeting for comments or questions. *********

	Item	Presenter	Page
1.	Roll Call		
2.	Approval of March 11, 2026, Board Meeting Minutes		2
3.	Amended SIP Permit 082237 and Update Sullivan County Redesignation Request Board Order # 26-007 **Comments from the Public or Online Participants**	Travis Blake	7
4.	Hankook PSD Construction Permit Extension Board Order # 26-008 **Comments from the Public or Online Participants**	Chelsea Materi	786
	General Business: **Comments from the Public or Online Participants**		

The meeting will be held in compliance with Tennessee Code Annotated Section 8-44-108, as amended by Chapter 490 of the 1999 Public Acts of the Tennessee General Assembly. The meeting will be conducted permitting participation by electronic or other means of communication. Consequently, some members of the Tennessee Air Pollution Control Board are allowed to and may participate by electronic or other means of communication and may not be physically present at the announced location of the meeting.

This agenda is subject to change. For the latest board agenda, please contact: Donna F. Brown (615) 981-3436 or donna.f.brown@tn.gov (Email is preferred for prompt reply)

Air Pollution Control Board
of the
State of Tennessee
Regular Meeting

On Wednesday March 11, 2026, at 9:31 A.M., the Air Pollution Control Board of the State of Tennessee, (hereinafter referred to as the "Board"), began its meeting on the 1st Floor of the Davy Crockett Tower, Conference Room 1-A. The following Board members were physically present:

Ms. Emily Leonard
Dr. John Benitez
Mr. Kyle Etheridge
Mr. Mike Haverstick
Mayor Ken Moore
Mr. Stephen Moore
Ms. Amy Spann
Mayor Larry Waters
Mr. Jimmy West

The following Board members joined the meeting via Web Ex:

Dr. Joshua Fu
Dr. Chunrong Jia

The following Board members were absent:

Dr. Shawn Hawkins
Ms. Caitlin Roberts
Mr. Nicholas Ramos

Ms. Emily Leonard, Senior Policy Analyst, Office of Policy and Planning, served as Commissioner's designee and Chairman of the Board. Ms. Michelle Owenby, Director, Division of Air Pollution Control, Technical Secretary, and Ms. Emily Leonard were physically present.

Ms. Michelle Owenby, Technical Secretary, welcomed Board members and those in attendance to the board meeting.

The Vice-Chairman, Mayor Larry Waters, called the meeting to order and asked for a roll call and the response was as follows:

Ms. Leonard	Present	Dr. Benitez	Present
Mr. Etheridge	Present	Dr. Fu	Present
Mr. Haverstick	Present	Dr. Hawkins	Absent
Ms. Roberts	Absent	Dr. Jia	Present
Mayor Moore	Present	Mr. Moore	Present
Ms. Spann	Present	Mr. Ramos	Absent
Mayor Waters	Present	Mr. West	Present

Nine (9) Board members were present, two (2) participated via Web Ex and three (3) were absent.

The next item on the agenda was the approval of the minutes from January 14, 2026, Board meeting. The Vice-Chairman requested a motion to approve the minutes. Mayor Ken Moore made a motion to approve the minutes, and Mr. Kyle Etheridge seconded the motion. The Vice-Chairman asked if there were any additions or corrections to the minutes. Hearing none, the Vice-Chairman asked for a roll call and the response was as follows:

Ms. Leonard	Yes	Dr. Benitez	Yes
Mr. Etheridge	Yes	Dr. Fu	Yes
Mr. Haverstick	Yes	Dr. Hawkins	Absent
Ms. Roberts	Absent	Dr. Jia	Yes
Mayor Moore	Yes	Mr. Moore	Yes
Ms. Spann	Yes	Mr. Ramos	Absent
Mayor Waters	Yes	Mr. West	Yes

The motion carried with Eleven (11) affirmative votes; the minutes were approved as presented.

The Vice-Chairman called on Mr. James Johnston to present the General Permits Rulemaking.

Mr. James Johnston informed the Board of revision to TAPCR 1200-03-09-.06, General Permits.

- Except for specific exemptions, sources of air pollution must obtain air quality permits to construct and operate.
- Traditional air quality permits are issued for individual locations and contain permit conditions customized for that specific facility.
- A General Permit is an alternative to traditional air quality permits that provides efficiency for both the permittee and the Division.
- A General permit contains permit conditions similar to traditional permits but is issued for a category of sources and not a specific location or company.
- Facilities can voluntarily opt-in to a general permit in lieu of a traditional permit by submitting a Notice of Intent (NOI) and receiving a Notice of Coverage (NOC).
- General Permits can be for the operation of an existing facility or for the construction and operation of a new facility.
- Advantages of a General Permit:
 - Quicker turnaround (approximately 60 days versus 115 days)
 - Customized forms
 - Consistent permit requirements
- Other aspects of permits are like traditional air permits
- Currently there are five (5) general permits for three industry categories (dry cleaners, concrete batch plants, non-metallic mineral crushing and sizing (quarries and other rock-crushing))
- Change:
 - Currently only TM facilities eligible (potential emissions below major source)
 - Some facilities have potential emissions above major source, but have or can take voluntary limits below major source thresholds (CM or SM)
 - Rule revision would expand applicability to CM sources
 - Currently working on one GP that would apply to CM sources (asphalt plants)
 - This change was requested by industry.

- Title V sources still not eligible for GP under this rule, 1200-03-09-.06, but there is a provision that allows for general permits in the Title V rule itself. Language is being added to clarify this. Currently no plans for GP for TV facilities
- Schedule:
 - Briefing today
 - Public hearing – April
 - Board approval – June or July
 - OGC, Governor’s Office, Legislative review
 - Effective – End of Year

The Vice-Chairman called on Mr. Travis Blake to present the Corrections and Clarifications to the SO₂ Redesignation Request.

Mr. Travis Blake notified the Board of a pending amendment to the State Implementation Plan for the Sullivan County sulfur dioxide non-attainment area. The pending amendment would correct an error in the emission limit for Eastman Chemical Company’s coal gasification flare and would make other minor corrections and clarifications requested by U. S. EPA.

The Vice-Chairman called on Mr. John Bregger to present the Prevention of Accidental Releases Rulemaking.

Mr. John Bregger notified the Board that Chapter 1200-03-32 currently requires major sources subject to Section 112(r) of the federal Clean Air Act to submit risk management plans to both the Division and the EPA, though EPA solely administers and enforces the program since Tennessee lacks delegated authority. This rulemaking would remove the requirement to submit those plans to the Division. It also proposes that only major sources submit an annual compliance certification report to the Division, while all sources continue reporting to the EPA. Additionally, the rule would be renumbered from control number 1200-03 to 0400-30. A public hearing will be held on May 6, 2026, before the Board’s Technical Secretary to consider these changes.

There being no further business to discuss before the Board, nor members of the public wishing to address the Board, the meeting was adjourned at 9:57 A.M.

(Signed) Michelle Owenby, Technical Secretary
Tennessee Air Pollution Control Board

Approved at Nashville, Tennessee on May 13, 2026.

(Signed) Mayor Larry Waters, Vice-Chairman
Tennessee Air Pollution Control Board

(Signed) David Salyers, Chairman
Tennessee Air Pollution Control Board

Redesignation Request and Maintenance Plan for the Sullivan County, Tennessee One-Hour Sulfur Dioxide Nonattainment Area (2010 SO₂ NAAQS)

Amendment to SIP Operating Permit 082237 and Clarification of SIP Elements

May 13, 2026

Prepared by:

Amendment to SIP Operating Permit 082237 and Clarification of SIP Elements

Introduction

The Kingsport, Tennessee sulfur dioxide (SO₂) nonattainment area includes the portion of Sullivan County encompassing a circle having its center at coordinates 36.5186 N; 82.5350 W (B-253 powerhouse, Eastman Chemical Company), and having a three-kilometer radius. Between 2008 and 2010, air quality monitoring at one monitor within this region indicated that the ambient SO₂ concentrations exceeded the 75 ppb one-hour SO₂ National Ambient Air Quality Standard (NAAQS) promulgated in 2010, and EPA designated the area as nonattainment for the one-hour SO₂ NAAQS, effective October 4, 2013.

On June 11, 2025, the Tennessee Air Pollution Control Board approved the submittal of a Redesignation Request and Maintenance Plan to U. S. EPA, based on an attaining three-year design value for the period 2020-2022 and upon air dispersion modeling that demonstrates future maintenance of the NAAQS. The Redesignation Request included a demonstration that the observed reduction in SO₂ levels is due to permanent and enforceable emission reductions (including new or revised emission reductions established in SIP operating permit 082237); an emissions inventory; and contingency measures to correct NAAQS exceedances that may occur after redesignation of the area to attainment. On January 24, 2026, the Board approved the submittal of a revision to the Redesignation Request, including SIP operating permit 083740, to revise the SO₂ monitoring requirements for Eastman Chemical Company's hazardous waste incinerators.

This submittal corrects an error in one emission limit and makes other minor corrections to SIP operating permit 082237 and makes additional minor corrections and clarifications as documented in the following pages. An amended SIP permit is included in Attachment A of this document, and a redline/strikeout version of the permit is included in Attachment B.

Error Correction and Administrative Updates – Condition S3-1 of SIP Permit 082237 and Flare Hourly Emissions

Eastman Chemical Company's coal gasification plant includes two flares, and modeling of the flares indicated attainment of the NAAQS at a critical emission value (CEV) of 16.28 lb/hr. Tennessee calculated a compliance ratio¹ and established an emission limit of 16.28 lb/hr (30-day rolling average) for this source. EPA commented as follows on the proposed emission limit:

The revised SO₂ emissions permit limit for the PES B-351-5, Coal Gasification Cold and Warm Flares (82-0003- 171, MSOP-17) does not ensure that the flare emissions will not contribute to a violation of the 1-hour SO₂ NAAQS. The revised permit limit of 16.28 lb/hr, 30 calendar day rolling average is identical to the 1-hour Critical Emission Value (CEV) that was included in the air modeling demonstration showing attainment of the NAAQS.

¹ Use of a compliance ratio is EPA's recommended method for establishing long-term limits of comparable stringency to the CEV. The compliance is calculated as the ratio of 99th percentile hourly and 30-day rolling average emission rates, and the long-term average is calculated as the modeled CEV multiplied by the compliance ratio. This calculation typically results in a 30-day emission limit that is less than the CEV (i. e., the compliance ratio is less than 1.0), but the method can fail for intermittent sources with highly variable emissions. The compliance ratio for Eastman's flares was calculated as 1.4 (i. e., the long-term limit would have been greater than the CEV), so the limit was adjusted downward based on an assumed compliance ratio of 1.0.

As discussed in Section V.D.2. and Appendix B of EPA’s April 23, 2014 “Guidance for 1-Hour SO₂ Nonattainment Area SIP Submissions,” longer term average limits (e.g., 30-day rolling average) may be justifiable, so long as they are of at least comparable stringency to a 1-hour limit at the CEV. When setting a longer-term average limit such as the 30-day rolling average limit for the flares, EPA expects that a downward adjustment of the numerical limit would be needed from the 1-hour CEV to compensate for the loss of stringency inherent in applying the longer-term average limit versus a 1-hour limit. Therefore, EPA recommends that TDEC revise the 30-day rolling average limit to provide for a comparably stringent limit to a 1-hour limit established at the CEV to ensure no violations of the NAAQS will reasonably be expected to occur. This may require operational changes to the coal gasification process or installation of additional control equipment to reduce the magnitude and frequency of emissions from the flare unit. The EPA is available to discuss this issue further upon request.

In its response to comments, Tennessee stated that the 30-day rolling average limit was adjusted downward from 16.28 lb/hr to 14.6 lb/hr. Because a compliance ratio of less than 1.0 could not be calculated from the existing emissions data, the 30-day limit for the flare was established as the highest 30-day emission rate observed during a modeled year in which there were no long-term exceedances of the CEV (i. e., the 30-day average emission rate did not exceed 16.28 lb/hr for any period). The highest 30-day rolling average meeting these requirements was 14.6 lb/hr and was observed in calendar year 2020. While the lower limit was documented in the response to comments, SIP permit 082237 did not include the corrected limit. This submittal corrects the error.

Table 4-4 of the redesignation request lists the specific emission limits for which Tennessee requests adoption into the SIP. A redline/strikeout version of the updated table is included in Attachment C of this document. Tennessee requests adoption of these limits into the SIP as shown in the revised table².

EPA also requested that Tennessee provide an updated spreadsheet of hourly flare emissions data that shows the frequency over the critical emission value (16.28 lb/hr) for calendar years 2019, 2020, and 2021 and provide the rationale used to derive the 14.6 lb/hr limit. An updated spreadsheet of flare emissions, including the calculation requested by EPA, is provided in Attachment D of this submittal. During the period in question (calendar years 2019, 2020, and 2021), the coal gasification plant operated for 26,303 hours³, and hourly emissions from the flare exceeded the CEV for 174 total hours during this three-year period (see **Table 1** for a summary). During this period, the hourly SO₂ emissions from the flare exceeded the CEV for 0.66% of the total operating time.

² Condition S3-1.C establishes an annual limit of 48 tons/year for SO₂ emissions from the flare. Tennessee is not requesting adoption of the annual limit into the SIP. Similarly, Tennessee is not requesting adoption of Condition S3-1.A (previous emission limit of 16.28 lb/hr) into the SIP.

³ The flare operates only to combust emissions from the coal gasification plant during periods of startup, shutdown, malfunction, or during other process upsets, and not all gas streams routed to the flare contain sulfur. Thus, there are typically no SO₂ emissions from the flare during normal operation. Attachment D includes all periods of normal operation, startup, shutdown, malfunction, and other process upsets but excludes periods where the coal gasification plant was not operating.

Table 1: Summary of Flare Actual Emissions for 2019 through 2021				
	2019	2020	2021	2019-2021
Total hours	8,759	8,784	8,760	26,303 (total)
Hours > 16.28 lb/hr	31	88	55	174 (total)
% > 16.28 lb/hr	0.35%	1.00%	0.63%	0.66% (average)
Highest 30-day rolling average emission rate (lb/hr)	1.0	14.6	7.9	14.6 (highest observed)

Because a long-term emission limit could not be calculated from the compliance ratio, as discussed above, Tennessee determined the revised limit empirically by modeling the actual emissions of the flare, as discussed in Attachment I1 of the Redesignation Request, and reviewing the model outputs for the attaining three-year period of 2019 and 2021. The highest 30-day emission rate reported during the three-year period was 14.6 lb/hr, and Tennessee adopted this value as the new emission limit because the revised limit is more stringent than the CEV and is more stringent than the initially-proposed limit of 16.28 lb/hr and because the model outputs indicate attainment of the NAAQS.

Error Correction and Clarification – Condition G4 of SIP Permit 082237

During its review of permit 082237, U. S. EPA identified one error (incorrect Clean Air Act citation) in Condition G4 of permit 082237 and requested clarification on specific portions of the permit condition, as discussed below.

Error correction: Condition G4 states that if an emission source is found to be noncompliant with a SIP emission limit, the Technical Secretary will determine whether additional limits must be added to the SIP to meet the requirements of section **172(c)(9)** of the Clean Air Act. EPA noted that the correct rule citation should be section **175A** of the Clean Air Act (maintenance plan requirements) rather than section 172(c)(9) (plan requirements for nonattainment areas). Tennessee corrected the rule citation in Condition G4, as shown in Attachments A and B of this document.

Clarification: EPA noted that as written in Condition G4, the phrase “**during any maintenance period**” could be interpreted to mean a system audit is triggered when four exceedances at a monitor are recorded in a 10-year maintenance period rather than during a single calendar year, and the Agency recommended that Tennessee clarify that exceedances are calculated on a calendar year basis⁴. While Tennessee believes that EPA’s concern is addressed by the full language of the contingency measure, which states that SO₂ concentrations are determined in accordance with Appendix T of 40 CFR Part 51⁵, the requested clarification was added to Condition G4.

Tennessee will comply with the following contingency measures: Upon notification by the Technical Secretary that a reference monitor for the area has registered four validated ambient SO₂ concentrations in

⁴ EPA suggested that the trigger language could read “...**in any calendar year during the maintenance period**” to clarify a full system audit is required if a monitor in the maintenance area records four exceedances in any calendar year within the maintenance period.”

⁵ Exceedances, if determined in accordance with Appendix T, would be determined on a calendar year basis.

excess of the standard (75 parts per billion, 99th percentile of daily maximum one-hour average concentrations determined in accordance with 40 CFR 50, Appendix T) in any calendar year during the maintenance period, Tennessee will require Eastman Chemical Company to undertake a full system audit of all emissions units subject to control under this plan and to submit a written system audit report within 30 days of the notification. The system audit report must detail the operating parameters of all emissions units, including modeled emission units that were excluded from the SIP, for four 10-day periods up to and including the date upon which the reference monitor registered each exceedance, together with recommended provisional SO₂ emission control strategies for each affected unit and evidence that these control strategies have been deployed, as appropriate. Tennessee will require Eastman Chemical Company, upon consultation with the Technical Secretary of the Tennessee Air Pollution Control Board, to develop and implement operational changes as necessary to prevent future monitored violations of the standard. These changes may include fuel switching, physical or operational reduction of production capacity, or other changes as appropriate. If a permit modification is deemed necessary, any changes to existing permit conditions shall follow the applicable procedures of TAPCR 1200-03-09. If an emission source is found to be noncompliant with a SIP emission limit, the Technical Secretary will, in addition to conducting enforcement proceedings to bring the source into compliance with its SIP limit, determine whether additional limits must be added to the SIP to meet the requirements of section 175A of the Clean Air Act.

Clarification – Appendix 3 of SIP Permit 082237

Appendix 3 of SIP operating permit 082237 contains the monitoring plan for the coal gasification flares. Eastman continuously monitors and records the control valve position for the flares (i. e., a measurement is taken at least once every 15 minutes) and calculates the SO₂ emission rate from the known gas composition. EPA noted that there is no frequency required for calculating the 30 operating day rolling average of SO₂ emissions from the flares. EPA requested that Tennessee add a frequency for which the SO₂ emissions are calculated or clarify if there is a system that automatically performs these calculations. Appendix 3 was updated to clarify that for each hour, flare SO₂ emissions are calculated automatically by the plant's Distributed Control System.

Error Correction – Table of Contents for June 11, 2025, SIP Submittal

The Table of Contents for the June 11, 2025, submittal includes an entry for Table 4-3 (Calculation of 30-Day Rolling Average Emission Limit, Coal Gasification Flare). Emissions from Eastman's coal gasification flare were addressed in the body of the SIP narrative during the drafting process, but the flare discussion was moved to Attachment I of the SIP prior to public participation and Board approval. The missing Table 4-3 is included in the SIP as Table I1-2 of Attachment I1.

Clarification – Table 2-7 of June 11, 2025, SIP Submittal

EPA requested clarification on Table 2-7 of the June 11, 2025 redesignation request (Summary of Modeling Results), because the table does not contain all of the model runs identified in Table H9-7 of the redesignation request. EPA requested that Tennessee update Table 2-7 to include all model runs, as shown in Table H9-7 and that Tennessee update the narrative that directs the reader to Table 2-7.

An updated version of Table 2-7 is shown as **Table 2** of this document. The model run ID numbers were not sequential because some model runs were eliminated as redundant (i. e., model runs not considered to be representative of worst-case conditions were not included in the final results). Table 2 includes the latitude

and longitude and distance to the nearest monitor for both the critical model runs identified in Table 2-7 of the original submittal and the other model runs identified in Table H9-7 of the redesignation request attachments. A description of each critical model run is included in **Table 3**.

Table 2: Summary of Model Results (Updated Version of Table 2-7 of the June 11, 2025, Redesignation Request)					
Model Run	Receptor Coordinates		Maximum Impact (ppb)	Nearest Monitor	Distance to Nearest Monitor (km) ⁶
	Latitude	Longitude			
Critical Model Runs					
2023-0120-1	36.5230	-82.5171	74.82	Ross N. Robinson	1.08
2023-0120-5	36.5073	-82.5525	66.45	Happy Hill	0.65
2023-0120-6	36.5073	-82.5525	67.17	Happy Hill	0.65
2023-0120-7	36.5248	-82.5193	72.36	Andrew Johnson	0.85
2023-0120-9	36.5221	-82.5204	69.97	Andrew Johnson	0.88
2023-0120-12	36.5229	-82.5294	68.98	Andrew Johnson	0.39
Other Model Runs					
2023-0120-2	36.52529	-82.53912	64.88	Andrew Johnson	0.94
2023-0120-3	36.50726	-82.55138	66.49	Happy Hill	0.64
2023-0120-4	36.50726	-82.55138	66.04	Happy Hill	0.64
2023-0120-8	36.52529	-82.53912	64.84	Andrew Johnson	0.94
2023-0120-10	36.52287	-82.52935	64.96	Andrew Johnson	0.40
2023-0120-11	36.52287	-82.52935	66.52	Andrew Johnson	0.40

⁶ All distances were calculated as follows: the latitude and longitude of each monitor were obtained from EPA's interactive map of air quality monitors (<https://www.epa.gov/outdoor-air-quality-data/interactive-map-air-quality-monitors>), and the Great Circle Calculator (<https://edwilliams.org/gccalc.htm>, redirected from NOAA's latitude/longitude distance calculator at <https://www.nhc.noaa.gov/gccalc.shtml>) was used to calculate the distance of each monitor from the modeled impact.

Location	Latitude	Longitude
Andrew Johnson Monitor	36.5264° N	82.5287° W
Happy Hill Monitor	36.5130° N	82.5505° W
Ross N. Robinson Monitor	36.5326° N	82.5163° W
Skyland Drive Monitor	36.5211° N	82.5024° W

Table 3: Description of Critical Model Runs	
Model Run	Description
2023-0120-1	Boilers 18 through 22 operating at the critical emission value (1,600 lb/hr), Boilers 23, 24, 30, and 31 not operating
2023-0120-5	Boiler 31 not operating, Boiler 30 operating at its NSPS allowable emission rate (317 lb/hr). The remaining emissions were allocated between Boilers 18 through 24 to model the critical emission value for the entire boiler complex.
2023-0120-6	Boiler 31 down, Boiler 30 at permitted emission rate divided by compliance ratio (366.4 lb/hr). The Boiler 30 emission rate was adjusted upward to demonstrate that the 30-day rolling average (317 lb/hr) is protective of the NAAQS. The remaining emissions were allocated between Boilers 18 through 24 to model the critical emission value for the entire boiler complex.
2023-0120-7	Boiler 30 down, Boiler 31 at permitted emission rate divided by compliance ratio. Although Boiler 31 has lower emissions than Boiler 30, dividing the allowable emission rate by the compliance ratio inflates the SO ₂ emissions for this run (i. e., Boiler 31 has a lower compliance ratio than Boiler 30). The remaining emissions were allocated between Boilers 18 through 24 to model the critical emission value for the entire boiler complex.
2023-0120-9	Combined NSPS allowable for Boilers 30 and 31 (610 lb/hr) adjusted downward to maintain emissions at 1,600 lb/hr.
2023-0120-12	Combined NSPS allowable for Boilers 30 and 31 divided by the compliance ratio for B-325. The remaining emissions were allocated between Boilers 18 through 24 to model the critical emission value for the entire boiler complex.

Clarification – Batch Chemical Manufacturing Operation

Section 2.2 of the redesignation request (Air Quality Modeling) states that model runs were performed for all sources “except for one batch chemical manufacturing operation,” and a footnote explains that Eastman’s specialty organic chemicals production (MSOP-25, PES OC-BATCH) was excluded using the criteria enumerated in EPA’s March 1, 2011, modeling guidance for the one-hour NO₂ NAAQS. EPA requested that Tennessee provide additional information on the batch chemical manufacturing operation.

For SO₂ modeling, EPA recommends that States follow the Agency’s Guideline on Air Quality Models (40 CFR Part 51, Appendix W) and the supplemental modeling guidance in Appendix A of EPA’s SIP guidance document. Appendix W states that all sources expected to cause a significant concentration gradient in the vicinity of the source of interest should be explicitly modeled and that the number of such sources is expected to be small except in unusual cases. Other sources, which do not cause significant concentration gradients in the vicinity of the primary source, should be included in the modeling via monitored background concentrations.

Tennessee evaluated the batch chemical manufacturing operation (MSOP-25, PES OC-BATCH) using EPA’s March 1, 2011, modeling guidance for the one-hour NO₂ NAAQS. The NO₂ modeling guidance identified challenges in the modeling of intermittent operations because Appendix W generally recommends the modeling of maximum allowable emissions at continuous operation. However, modeling of an intermittent source as if it operated continuously can result in significantly higher modeled impacts than would realistically be observed for intermittent sources. The overestimation results from an implicit assumption that worst-case emissions will coincide with worst-case meteorological conditions on specific hours and days associated with the modeled design value based. In fact, the guidance noted, the probabilistic form of the standard is explicitly intended to provide a more stable metric for characterizing ambient air quality levels by mitigating the impact of outliers in the emissions distribution⁷. The guidance expressed concern that given the implications of the probabilistic form of the 1-hour NO₂ NAAQS, EPA is concerned that assuming continuous operations for intermittent emissions would effectively impose a level of stringency beyond that intended by the level of the standard itself. The guidance stated that existing modeling guidelines provide sufficient discretion for reviewing authorities to exclude certain types of intermittent emissions from compliance demonstrations for the 1-hour NO₂ standard under these circumstances.

Tennessee used EPA’s 2011 NO₂ guidance and considered the following criteria to determine whether certain intermittent sources may be excluded from modeling and/or incorporation of the sources’ allowable emissions into the SIP:

- **Randomness of operating hours:** An intermittent source that operates on a random schedule that cannot be controlled would be appropriate to consider under the guidance. On the other hand, an intermittent source that operates on a regular schedule (e. g., one hour every day) would be less suitable for application of the guidance, since the single hour of emissions from each day could contribute significantly to the modeled design value based on the annual distribution of daily maximum concentrations.

⁷ The one-hour NO₂ and SO₂ standards are based on the same format, except that the NO₂ standard is based on the 98th percentile of the daily maximum one-hour average concentration, and the SO₂ standard is based on the 99th percentile.

- **Frequency of operating hours:** The 2011 guidance notes that the frequency of startup/shutdown events varies by facility type. For example, a large baseload power plant may experience startup/shutdown events on a relatively infrequent basis, but a peaking unit may go through much more frequent startup/shutdown cycles. It may be appropriate to apply this guidance in the former case, but not the latter.
- **Flexibility of scheduling:** Certain emissions scenarios can be scheduled with some degree of flexibility, while others cannot be scheduled. For example, emergency generator emissions from regular use can be scheduled, while emergency use typically cannot be scheduled.

The batch chemical manufacturing operation consists of equipment for the batch production of specialty organic chemicals. Conditions E3-8 and E3-9 of Title V permit 576606 limit SO₂ emissions from this source to 1,000 ppmvd (one-hour average) and 7.05 tons/year. The Title V application for this process states that SO₂ emissions from the batch processes are calculated for each operating step, and the total emissions for each step are added to calculate an emission factor for each product (lb/batch). These emission factors are multiplied by the number of batches produced to calculate total emissions from the production of each specific product during a specified time period (e. g., 12-month rolling totals).

The batch chemical manufacturing process produces multiple products, and because SO₂ is not emitted from all processes, Tennessee requested additional information on SO₂ emissions from this source. Eastman responded (see Attachment E)⁸ that only one process in B-267 (benzimidazole) generates SO₂ emissions and provided the following information.

- Emissions are estimated at 28.2 lb/batch and is based on conversion of a sulfur-containing additive to SO₂.
- Emissions occur during one distinct step in the process, and that step typically requires about one hour to complete.
- Benzimidazole is a campaigned product, and only one to two batches per year are required to meet customer demand.
- Emissions are routed to the #12 Caustic Scrubber, Vent ID A-L in PES OC-BACTH in MSOP-25.

Table 4 summarizes the times the SO₂ generating step occurred since January of 2017.

⁸ E-mail from Steve Moore (Eastman Chemical Company) to Travis Blake (TDEC-APC) September 8, 2022. This information updated a previous e-mail dated January 21, 2022, which indicated more frequent operation of the source. The original data were based on caustic scrubber usage rather than the operation of the specific batch process that generates SO₂ emissions, and the technician who pulled the data did not understand what specific information was sought. The caustic scrubber is required by 40 CFR 63 Subpart FFFF to control halogenated HAP emissions, so the scrubber operating time is not representative of SO₂ emissions from the source (follow-up phone call between Travis Blake (TDEC-APC), Chelsea Materi (TDEC-APC), and Steve Moore (Eastman Chemical Company), October 4, 2022.

Table 4: SO₂ Emissions from Batch Chemical Manufacturing (MSOP-25, PES OC-BATCH)				
Year	Start Time	Stop Time	Total Time (hr)	Total SO₂ Generated (lb)
2017	12/11/2017 2:41	12/11/2017 7:41	5.0	28.2
	12/14/2017 16:33	12/14/2017 17:40	1.1	28.2
2018	No batches were produced			
2019	2/24/2019 9:20	2/24/2019 10:25	1.1	28.2
	2/27/2019 2:41	2/27/2019 2:54	0.2	28.2
2020	No batches were produced			
2021	4/29/2021 0:18	4/29/2021 1:04	0.8	28.2

The batch process does not operate randomly, and Tennessee assumes that benzimidazole production can be scheduled with some degree of flexibility, but Table 2 indicates that the batch process operated in SO₂ service for less than 0.07% of the total hours during each calendar year between 2017 and 2021. The operating hours are so infrequent that the frequency of operation outweighs the other factors, and the batch chemical manufacturing operation may be considered as an intermittent SO₂ source. Therefore, this source was excluded from the modeling based on infrequent and irregular operation and on the variation in operating hours from month to month and year to year. The

Clarification – 2023 Modeling

EPA requested that Tennessee clarify, as applicable, that references to the 2023 attainment modeling demonstration refers to the modeling to support attainment of the NAAQS for the 2025 redesignation and maintenance SIP.

The air quality modeling submitted with the June 11, 2025, redesignation request was originally submitted in 2023 to support Tennessee's attainment demonstration for the nonattainment area. The 2023 model results were resubmitted with the redesignation request but were updated to support changes to the emission limits for Eastman's coal gasification flares. Except as specifically updated for the flare, the original modeling results remain valid and continue to support attainment of the NAAQS for the 2025 redesignation request.

Public Participation

Public participation requirements for SIPs are established in 40 CFR §51.102. In general, states must provide notice, provide the opportunity to submit written comments and allow the public the opportunity to request a public hearing. These requirements apply for adoption and submission of any plan or revision required by §51.104(a), any individual compliance schedule under §51.260, or any revision under §-51.104(d). The public participation requirements for the redesignation request were fulfilled with 30-day comment periods, public hearings held on March 26, 2025, and December 4, 2025, and responses to public comments, and further public participation is not required for this submittal. This submittal serves to correct minor errors within permit 082237 and to clarify the existing SIP through supplementation or through minor updates to wording, and Tennessee is not establishing new SIP requirements or relaxing existing requirements.

Clean Air Act §110(l)

Section 110(l) of the Clean Air Act requires each SIP revision to be adopted only after reasonable notice and public hearing and states that that the EPA Administrator may not approve any SIP revision that would interfere with any applicable requirement concerning attainment and reasonable further progress, or any other applicable requirement of the federal Act. The proposed revision would not interfere with any applicable requirement concerning attainment or maintenance of a NAAQS, reasonable further progress toward attainment of a NAAQS, or any other applicable requirement of the NAAQS. Specifically, the emission limits that are necessary for continued attainment of the SO₂ NAAQS in the Sullivan County nonattainment area are not being increased, and other SIP requirements are not being relaxed. This revision will be submitted to the Tennessee Air Pollution Control Board upon completion of the public participation requirements specified by 40 CFR §51.102.

Attachment A: SIP Permit 082237, Amendment #1

Attachment B: SIP Permit 082237, Amendment #1 Redline/Strikeout

Attachment C: Redesignation Request Table 4-4 Redline

Table 4-4: Other Emission Limits Included in the SIP

Permit	Condition(s)	Affected Source	Limit/Control Measure	Associated Monitoring
PSD Construction Permit 966859F	6	PES B-253-1 Boilers 25 through 29 (82-0003-01, MSOP-02)	Only natural gas shall be used as fuel	None specified. Compliance with the fuel usage restriction is based on the design and construction of the boiler (natural gas feed lines and burners physically restrict the source's ability to burn other fuels).
SIP Operating Permit 082237	S1-1 through S1-3	PES B-83 Boilers 18 through 24 (82-0003-01, MSOP-02) and PES B-325 Boilers 30 and 31 (82-0003-131, MSOP-26)	1,248 lb/hr (30-day average, combined limit for all boilers) and associated monitoring	Operate, maintain, and repair a dry sorbent injection (DSI) system to reduce SO ₂ emissions from B-83 Boilers 23 and 24 as required to maintain and assure compliance with the specified emission limits. Calculate hourly emissions SO ₂ emissions from CEMS data and flow monitoring (B-83 Boilers 23 and 24 and B-325 Boilers 30 and 31) or from CEMS data and calculated heat input (B-83 Boilers 18 through 22).
	S5-1 and S5-2	B-248-1 Solid/Liquid Chemical Waste Incinerators (82-0003-282, MSOP-32)	15.2 lb/hr (30-day average, combined limit for both rotary kilns) and associated monitoring	Calculate hourly emissions from sulfur feed rate and scrubber pH using established algorithm. Continuously monitor scrubber pH and determine the waste stream sulfur concentrations from analysis or process knowledge.
	S6-1 and S6-2	B-248-2 Liquid Chemical Waste Incinerator (82-0003-283, MSOP-32)	2.0 lb/hr (30-day average) and associated monitoring	
	S2-1 and S2-2	B-334-1, Incinerator for Acid Gas Removal and Sulfur Recovery Plant (82-0003-168, MSOP-17)	21.8 lb/hr (24-hour block average) and associated monitoring	Continuously measure the gas composition and gas flow rate in the SCOT process overhead stream entering the tail gas incinerator and use the monitored parameters to calculate the SO ₂ emission rate.
	S4-1 and S4-2	B-55-1, Organic Acids & Anhydrides Manufacturing, Vents B, C, E, I, and K (82-0003-224, MSOP-23)	6.74 lb/hr and associated monitoring	Periodic stack testing.
	S3-1.B and S3-2	PES B-351-5, Coal Gasification Cold and Warm Flares (82-0003-171, MSOP-17)	~~14.6~~ 16.28 lb/hr (30 calendar day rolling average basis) and associated monitoring.	Continuously measure the gas composition and gas flow rate entering the flare and use the monitored parameters to calculate the SO ₂ emission rate.
PSD permit 955272F	4	PES B-325-1, Boiler 30	317 lb/hr (30 calendar day rolling average basis) and associated monitoring.	Calculate hourly SO ₂ emissions from CEMS data and flow monitoring, as required by permit 082237.
		PES B-325-1, Boiler 31	293 lb/hr (30 calendar day rolling average basis) and associated monitoring.	
Title V Operating Permit 574994 (Primester)	E5-1	82-0510-03, B-441-2, Vent C	1,000 parts per million by volume, dry basis (one hour average) and 0.25 pounds per hour (three-hour average)	Compliance is based upon parametric monitoring of the minimum scrubber flow rate (three-hour moving average of 1.0 gallons/minute) and minimum scrubber pH (24-hour block average value of 6.0).

Attachment E: 2022 E-mail from Eastman Chemical Company

Attachment F: Board Order 26-007

Attachment A: SIP Permit 082237, Amendment #1

**STATE OF TENNESSEE
AIR POLLUTION CONTROL BOARD
DEPARTMENT OF ENVIRONMENT AND CONSERVATION
NASHVILLE, TENNESSEE**

PERMIT TO OPERATE AIR CONTAMINANT SOURCE(S)

Permit Number: 082237 (Amendment #1)
Facility (Permittee): Eastman Chemical Company
Facility ID: 82-0003
Facility Address: 200 South Wilcox Drive, Kingsport
Sullivan County
Facility Classification: Title V
Federal Requirements: SIP
Facility Description: Emission Sources Identified in Section I of this Permit

Operating Permit 082237 (Amendment #1), consisting of 15 pages, is hereby issued May 13, 2026, pursuant to the Tennessee Air Quality Act and by the Technical Secretary, Tennessee Air Pollution Control Board, Department of Environment and Conservation. The holder of this permit shall comply with the conditions contained in this permit as well as all applicable provisions of the Tennessee Air Pollution Control Regulations (TAPCR).

Michelle W. Owenby
Technical Secretary
Tennessee Air Pollution Control Board

No Authority is Granted by this Permit to Operate, Construct, or Maintain any Installation in Violation of any Law, Statute, Code, Ordinance, Rule, or Regulation of the State of Tennessee or any of its Political Subdivisions.

Section I – Sources Included in this Operating Permit

FACILITY DESCRIPTION			
Source Number	Source Description	Status	Control Device/Equipment
01	Boilers 18-24 (MSOP-02, PES B-83-1)	Active	Dry Sorbent Injection (Boilers 23 and 24)
131	Boilers 30-31 (MSOP-26, PES B-325-1)	Active	Spray Dryer Absorber and ESP (Boiler 30), Spray Dryer Absorber and Baghouse (Boiler 31)
168	Tail Gas Incinerator (MSOP-17, PES B-334-1)	Active	N/A
171	Cold and Warm Flares (MSOP-17, PES B-351-5)	Active	N/A
224	Organic Acids & Anhydrides Manufacturing, Vents B, C, E, I, and K (MSOP-23, PES B-55-1)	Active	N/A
282	Solid/Liquid Chemical Waste Incinerators (MSOP-32, PES B-248-1)	Active	Rod Scrubber
283	Liquid Chemical Waste Incinerator (MSOP-32, PES B-248-2)	Active	Rod Scrubber

Section II – Permit Record

Permit Type	Description of Permit Action	Issue Date
Initial	Initial SIP permit issuance	June 11, 2025
Amendment #1	Amendment #1 was issued to clarify how the contingency measures are triggered in Condition G4, to correct the applicable Clean Air Act reference for contingency measures in Condition G4, to correct the SO ₂ emission limits in Condition S3-1, and to reference the updated monitoring requirements of SIP permit 083740 for Condition S5-1 and Appendix 5.	May 13, 2026

Section III - General Permit Conditions

G1. Reserved.

G2. General Recordkeeping Requirements

The information contained in logs, records, and submittals required by this permit shall be kept at the facility's address, unless otherwise noted, and provided to the Technical Secretary or a Division representative upon request. Computer-generated logs are acceptable. Compliance is assured by retaining the logs, records, and submittals specified in this permit for a period of not less than five years at the facility's address.

TAPCR 1200-03-10-.02(2)(a)

G3. Submittals

Unless otherwise specified within this permit, the permittee shall submit, preferably via email and in Adobe Portable Document format (PDF), all applicable plans, checklists, certifications, notifications, test protocols, reports, and applications to the attention of the following Division Programs at the email addresses indicated in the table below:

Permitting Program	Compliance Validation Program	Field Services Program
• Notifications • Startup certifications • Applications • NSPS reports • MACT/GACT/NESHAP reports • Emission statements • Construction permit extension requests	• Test protocols • Emission test reports • Visible emission evaluation reports	• Semiannual reports • Annual compliance certifications/status reports
Division of Air Pollution Control Davy Crockett Tower, 7 th Floor 500 James Robertson Parkway Nashville, TN 37243 Air.Pollution.Control@tn.gov		

The permittee shall submit the information identified above as requested in this permit. In lieu of submitting this information to the email addresses above, the permittee may submit the information to the attention of the respective Division Programs at the mailing addresses listed above.

TAPCR 1200-03-09-.03(8)

G4. Contingency Measures

Upon notification by the Technical Secretary that a reference monitor for the area has registered four validated ambient SO₂ concentrations in excess of the standard (75 parts per billion, 99th percentile of daily maximum one-hour average concentrations determined in accordance with 40 CFR 50, Appendix T) in any calendar year during the maintenance period, the permittee shall undertake a full system audit of all emissions units subject to control under this plan. The permittee must submit a written system audit report within 30 days of the notification. The system audit report must detail the operating parameters of all emissions units, including modeled emission units that were excluded from the SIP, for four 10-day periods up to and including the date upon which the reference monitor registered each exceedance, together with recommended provisional SO₂ emission control strategies for each affected unit and evidence that these control strategies have been deployed, as appropriate. Upon consultation with the Technical Secretary, the permittee shall develop and implement operational changes as necessary to prevent future monitored violations of the standard. These changes may include fuel switching, physical or operational reduction of production capacity, or other changes as appropriate. If a permit modification is deemed necessary, any changes to existing permit conditions shall follow the applicable procedures of TAPCR 1200-03-09. If an emission source is found to be noncompliant with a SIP emission limit, the Technical Secretary will, in addition to conducting enforcement proceedings to bring the source into compliance with its SIP limit, determine whether additional limits must be added to the SIP to meet the requirements of section 175A of the Clean Air Act.

TAPCR 1200-03-09-.03(8)

Section IV - Source Specific Permit Conditions

Source Number	Source Description
01	Boilers 18-24 (MSOP-02, PES B-83-1)
131	Boilers 30-31 (MSOP-26, PES B-325-1)

S1-1. Emission Limitation(s)

On and after September 1, 2023, sulfur dioxide (SO₂) emitted from this source shall not exceed 1,248 lb/hr (combined limit for all boilers, 30-day rolling average).

TAPCR 1200-03-09-.03(8), 40 CFR §§51.110 – 51.112, Condition 1 of SIP permit 080222.

Compliance Method: Compliance with this condition shall be assured as specified in Appendix 1.

S1-2. Operation of Dry Sorbent Injection

On and after March 1, 2023, the permittee shall operate and maintain a dry sorbent injection (DSI) system to reduce SO₂ emissions from B-83 Boilers 23 and 24. The permittee shall operate, maintain and repair the control device as required to maintain and assure compliance with the specified emission limits. All periods of nonoperation of the DSI and records of all repair and maintenance activities shall be recorded in a suitable permanent form and kept available for inspection by the Technical Secretary or an authorized representative. These records must be retained for a period of not less than five years. Periods of nonoperation of the DSI and the date each maintenance and repair activity began shall be entered in the log no later than seven days following the start of the period of nonoperation or maintenance and repair maintenance activity, and the completion date shall be entered in the log no later than seven days after activity completion.

TAPCR 1200-03-09-.03(8), 40 CFR §§51.110 – 51.112, Condition 2 of SIP permit 080222.

S1-3. Periodic Reporting

On and after the issue date of this permit, the permittee shall submit reports of any monitoring or recordkeeping required by this permit with the semiannual reports required by the applicable Title V Operating Permit. Periodic reports shall include the following information:

- A. 30-day average SO₂ emission rate for each day in the reporting period. A summary report¹ of this data is acceptable provided there is sufficient information to enable the Technical Secretary to evaluate compliance.
- B. All instances of deviations from these permit requirements must be clearly identified in the reports. Deviation reports shall include a description of the deviation; the duration of the event; the explanation or probable cause; and identification of corrective actions or preventative measures undertaken to correct the deviation.
- C. The owner or operator shall submit CEMS downtime reports in accordance with Rule 1200-03-10-.02(2). If there are no excess emissions or CEMS downtime during the reporting period, the owner or operator shall submit a report to that effect.

¹ For all emissions reporting requirements identified in this permit, the minimum requirements for summary reporting are the highest measured emission rate, the date on which the measurement occurred, and either a report of all deviations or a statement that no deviations occurred during the reporting period. For reports of parametric monitoring, the minimum requirements for summary reporting are the highest or lowest measured value, as applicable, the date on which the measurement occurred, and either a report of all deviations or a statement that no deviations occurred during the reporting period.

This report must be certified by a responsible official consistent with TAPCR 1200-03-09-.02(11)(d)4.

TAPCR 1200-03-09-.03(8) and 1200-03-10-.02(1)(a)

Source Number	Source Description
168	Tail Gas Incinerator (MSOP-17, PES B-334-1)

S2-1. Emission Limitation(s)

On and after September 1, 2023, SO₂ emitted from this source shall not exceed 21.8 lb/hr (24-hour block average).

TAPCR 1200-03-09-.03(8), 40 CFR §§51.110 – 51.112, Condition 1 of SIP permit 080222.

Compliance Method: Compliance with this condition shall be assured as specified in Appendix 2.

S2-2. Periodic Reporting

On and after the issue date of this permit, the permittee shall submit reports of any monitoring or recordkeeping required by this permit with the semiannual reports required by the applicable Title V Operating Permit. Periodic reports shall include the following information:

- A. 24-hour average SO₂ emission rate for each day in the reporting period. A summary report of this data is acceptable provided there is sufficient information to enable the Technical Secretary to evaluate compliance.
- B. All instances of deviations from these permit requirements must be clearly identified in the reports. Deviation reports shall include a description of the deviation; the duration of the event; the explanation or probable cause; and identification of corrective actions or preventative measures undertaken to correct the deviation.
- C. The owner or operator shall submit CEMS downtime reports in accordance with Rule 1200-03-10-.02(2). If there are no excess emissions or CEMS downtime during the reporting period, the owner or operator shall submit a report to that effect.

This report must be certified by a responsible official consistent with TAPCR 1200-03-09-.02(11)(d)4.

TAPCR 1200-03-09-.03(8) and 1200-03-10-.02(1)(a)

Source Number	Source Description
171	Cold Flare and Warm Flare for South Production Areas (MSOP-17, PES B-351-5)

S3-1. Emission Limitation(s)

- A. On and after July 11, 2025, SO₂ emitted from this source shall not exceed 16.28 lb/hr (30-day rolling average).
- B. On and after June 12, 2026, SO₂ emitted from this source shall not exceed 14.6 lb/hr (30-day rolling average).
- C. On and after June 11, 2026, SO₂ emitted from this source shall not exceed 48 tons during any period of 12 consecutive months.

TAPCR 1200-03-09-.03(8), 40 CFR §§51.110 – 51.112

Compliance Method: Compliance with this condition shall be assured as follows:

- A. Compliance with the hourly emission limit shall be assured as specified in Appendix 3 of this permit.
- B. The permittee shall calculate actual emissions of sulfur dioxide emitted during each period of 12 consecutive months and maintain records of the emissions in the format shown in Appendix 4 of this permit.

TAPCR 1200-03-10-.02(1)(a), 1200-03-10-.02(2)(a)

S3-2. Periodic Reporting

On and after the issue date of this permit, the permittee shall submit reports of any monitoring or recordkeeping required by this permit with the semiannual reports required by the applicable Title V Operating Permit. Periodic reports shall include the following information:

- A. 30-day average SO₂ emission rate for each day in the reporting period. A summary report of this data is acceptable provided there is sufficient information to enable the Technical Secretary to evaluate compliance.
- B. 12-month rolling total SO₂ emissions for each month in the reporting period. A summary report of this data is acceptable provided there is sufficient information to enable the Technical Secretary to evaluate compliance.
- C. All instances of deviations from these permit requirements must be clearly identified in the reports. Deviation reports shall include a description of the deviation; the duration of the event; the explanation or probable cause; and identification of corrective actions or preventative measures undertaken to correct the deviation.

This report must be certified by a responsible official consistent with TAPCR 1200-03-09-.02(11)(d)4.

TAPCR 1200-03-09-.03(8) and 1200-03-10-.02(1)(a)

- S3-3.** This emission limits and other requirements established by this permit supersede the limits previously established in SIP permit 080222.

TAPCR 1200-03-09-.03(8)

Source Number	Source Description
224	Organic Acids & Anhydrides Manufacturing, Vents B, C, E, I, and K (MSOP-23, PES B-55-1)

S4-1. Emission Limitation(s)

On and after March 8, 2026, SO₂ emitted from this source shall not exceed 6.74 lb/hr (one-hour average).

TAPCR 1200-03-09-.03(8), 40 CFR §§51.110 – 51.112

Compliance Method: Compliance with this condition shall be assured as follows:

- A. The permittee shall conduct or have conducted performance tests to determine the amount of sulfur dioxide emitted from this source. The initial performance test shall be completed no later than June 6, 2026. For Vent E (not in service as of the issue date of this permit), an initial performance test shall be conducted no later than

180 days following any restart of the associated process. The permittee shall provide, at no expense to the Technical Secretary:

- a) Sampling ports adequate for test methods applicable to such facility.
- b) Safe sampling platform(s)
- c) Safe access to sampling platform(s)
- d) Utilities for sampling and testing equipment

TAPCR 1200-03-10-.01

- B. For Vent B, the performance test shall consist of at least three test runs. For each test run, reference method test data shall be collected every 15 minutes over the entire batch cycle. The test data shall be used to generate an emissions curve that is representative of the SO₂ emission rate in lb/hr over the duration of the batch cycle.
- C. For Vents C, E, I, and K, each performance test shall consist of three separate one-hour runs using the applicable test method. For the purpose of determining compliance with the applicable standard, the arithmetic means of the results of the three runs shall apply. In the event that a sample is accidentally lost or conditions occur in which one of the three runs must be discontinued because of a forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances beyond the owner or operator's control, compliance may, upon the Technical Secretary's approval, be determined using the arithmetic mean of the results of the two other runs.

TAPCR 1200-03-10-.01(1)(a), (b), and (c)

- D. The permittee shall notify the Technical Secretary in writing of their intention to conduct the performance test at least 30 days before the performance test is initially scheduled to begin to allow the Technical Secretary to have an observer(s) present during the test.

In the event the permittee is unable to conduct the performance test on the date specified in the notification requirement in this condition, the permittee must notify the Technical Secretary as soon as practical prior to the scheduled performance test date and specify the date when the performance test is rescheduled. This notification of delay in conducting the performance test shall not relieve the permittee of legal responsibility for compliance with any other applicable provisions of any other applicable Federal, State, or local requirement, nor will it prevent the Technical Secretary from implementing or enforcing the terms of this permit.

TAPCR 1200-03-10-.01 and 1200-03-10-.02(c)

- E. The permittee shall develop and submit a site-specific test plan for approval to the Technical Secretary at least 30 calendar days before the performance test is scheduled to take place, simultaneously with the notification of intent to conduct a performance test. The site-specific test plan shall include a test program summary, the test schedule, data quality objectives (i. e., the pretest expectations of precision, accuracy, and completeness of data), and an internal and external quality assurance (QA) program.

TAPCR 1200-03-10-.01

- F. The performance test shall be conducted, and data reduced in accordance with the methods and procedures specified in 40 CFR part 60 Appendix A.

TAPCR 1200-03-10-.01

- G. The permittee shall report the results of the performance test to the Technical Secretary within 60 days following the completion of the performance test. The report shall include the relevant process data (material input rate, production rate, etc., as appropriate) recorded during the test.

TAPCR 1200-03-10-.01

- H. Upon submittal of the test report, the permittee shall calculate hourly emissions from the performance test results and batch data using the plant's distributed control system.

TAPCR 1200-03-10-.01

- I. The permittee shall conduct subsequent performance tests no later than 180 days following any process change that would increase emissions from any vent². If there are no process changes that would increase SO₂ emissions, subsequent performance tests shall be conducted no later than 60 calendar months after the previous test.

TAPCR 1200-03-10-.01

S4-2. Periodic Reporting

On and after August 5, 2026, the permittee shall submit reports of any monitoring or recordkeeping required by this permit with the semiannual reports required by the applicable Title V Operating Permit. Periodic reports shall include the following information:

- A. SO₂ emission rate (lb/hr) for each day of the reporting period. A summary report of this data is acceptable provided there is sufficient information to enable the Technical Secretary to evaluate compliance.
- B. A description of any process changes that would increase SO₂ emissions, or a statement that there were no process changes during the reporting period that would increase SO₂ emissions from the source.
- C. All instances of deviations from these permit requirements must be clearly identified in the reports. Deviation reports shall include a description of the deviation; the duration of the event; the explanation or probable cause; and identification of corrective actions or preventative measures undertaken to correct the deviation.

This report must be certified by a responsible official consistent with TAPCR 1200-03-09-.02(11)(d)4.

TAPCR 1200-03-09-.03(8) and 1200-03-10-.02(1)(a)

Source Number	Source Description
282	Solid/Liquid Chemical Waste Incinerators (MSOP-32, PES B-248-1)

S5-1. Emission Limitation(s)

On and after September 1, 2023, SO₂ emitted from this source shall not exceed 15.2 lb/hr (combined limit for both rotary kilns, 30-day rolling average).

TAPCR 1200-03-09-.03(8), 40 CFR §§51.110 – 51.112, Condition 1 of SIP permit 080222.

Compliance Method: Compliance with this condition shall be assured as specified in SIP operating permit 083740.

S5-2. Periodic Reporting

² If a process change increases emissions from the batch reactors, then all vents must be tested to ensure that SO₂ emissions do not increase in other areas of the process. For other changes, Eastman must specify which vents will be tested in the site-specific test plan.

On and after the issue date of this permit, the permittee shall submit reports of any monitoring or recordkeeping required by this permit with the semiannual reports required by the applicable Title V Operating Permit. Periodic reports shall include the following information:

- A. 30-day average SO₂ emission rate for each day in the reporting period. A summary report of this data is acceptable provided there is sufficient information to enable the Technical Secretary to evaluate compliance.
- B. All instances of deviations from these permit requirements must be clearly identified in the reports. Deviation reports shall include a description of the deviation; the duration of the event; the explanation or probable cause; and identification of corrective actions or preventative measures undertaken to correct the deviation.

This report must be certified by a responsible official consistent with TAPCR 1200-03-09-.02(11)(d)4.

TAPCR 1200-03-09-.03(8) and 1200-03-10-.02(1)(a)

Source Number	Source Description
283	Liquid Chemical Waste Incinerator (MSOP-32, PES B-248-2)

S6-1. Emission Limitation(s)

On and after September 1, 2023, SO₂ emitted from this source shall not exceed 2.0 lb/hr (30-day rolling average).

TAPCR 1200-03-09-.03(8), 40 CFR §§51.110 – 51.112, Condition 1 of SIP permit 080222

Compliance Method: Compliance with this condition shall be assured as specified in Appendix 5.

S6-2. Periodic Reporting

On and after the issue date of this permit, the permittee shall submit reports of any monitoring or recordkeeping required by this permit with the semiannual reports required by the applicable Title V Operating Permit. Periodic reports shall include the following information:

- A. 30-day average SO₂ emission rate for each day in the reporting period. A summary report of this data is acceptable provided there is sufficient information to enable the Technical Secretary to evaluate compliance.
- B. All instances of deviations from these permit requirements must be clearly identified in the reports. Deviation reports shall include a description of the deviation; the duration of the event; the explanation or probable cause; and identification of corrective actions or preventative measures undertaken to correct the deviation.

This report must be certified by a responsible official consistent with TAPCR 1200-03-09-.02(11)(d)4.

TAPCR 1200-03-09-.03(8) and 1200-03-10-.02(1)(a)

(end of conditions)

Appendix 1: B-83 and B-325 SO₂ Monitoring

Stack or Flow Diagram Points	PES B-83-1, Boilers 18 through 24 PES B-325-1, Boilers 30 and 31
Pollutants	SO ₂ (combined total emissions for all boilers)
Description of Monitoring Protocol	The source owner or operator shall install, maintain, operate, and submit reports of sulfur dioxide emissions from continuous in-stack monitoring systems for sulfur dioxide (SO₂) and either oxygen (O₂) or carbon dioxide as the diluent gas. The sensors of these monitoring systems shall be located in representative areas of the effluent gas stream of the boiler. Electronic signal combining systems shall be installed to convert the output of the pollutant monitors into units of the applicable emission standards. The in-stack sulfur dioxide monitoring systems shall meet all the requirements of 40 CFR Part 60 Appendix B Performance Specification 2 or 40 CFR Part 75 Appendix A. SO₂ emission rates in lb/hr shall be calculated as follows: Boilers 23-24 and 30-31: The source owner or operator shall install, certify, operate, and maintain a SO₂ continuous emission monitoring system and a flow monitoring system with an automated data acquisition and handling system for measuring and recording SO₂ concentration (in parts per million), volumetric gas flow (in standard cubic feet per hour), and SO₂ mass emissions (in lb/hr) discharged to the atmosphere. The in-stack flow monitoring systems shall meet all the requirements of 40 CFR Part 60 Appendix B Performance Specification 6 or 40 CFR Part 75 Appendix A. Boilers 18-22: 40 CFR 60 Appendix A, Method 19 shall be used to determine hourly average emissions of sulfur dioxide expressed as pounds per million Btu heat input. Hourly average emissions of sulfur dioxide expressed as pounds per hour shall be determined by multiplying each hourly average sulfur dioxide emission rate expressed as pounds per million Btu by the respective hourly average heat input. The heat input for Boilers 18-22 will be computed by determining the energy rise of the steam across the individual boiler. The energy rise will be calculated as the difference in the energy of the output steam and the energy of the feedwater input. Boiler outlet pressure, temperature and flow along with the inlet feedwater temperature and flow will be used to determine the total energy change across the boiler. The energy of the outlet steam will be approximated by multiplying the boiler outlet steam flow by steam enthalpy. Enthalpy for the outlet steam conditions shall be determined using the ASME International Steam Tables for Industrial Use at the steam outlet pressure and temperature. Boiler outlet energy will be adjusted for an assumed boiler efficiency of 85%. The feedwater energy will be calculated by multiplying the inlet feedwater flow by the inlet feedwater enthalpy. The feedwater enthalpy will be determined using the enthalpy of saturated water from the ASME Steam Tables at the boiler economizer inlet feedwater temperature. The boiler heat will be determined by subtracting the boiler inlet energy from the boiler outlet energy. This heat input will be transmitted to the SO₂ CEMS data acquisition and control system (DAHS) to use for computation of the sulfur dioxide mass emission rate in pounds per hour. Missing emissions data shall be addressed as follows: Data is considered missing if there are fewer than two valid 15-minute averages during the hour. Data shall be substituted for the duration of each missing data period by using the higher value of: 1) the last valid hourly emission rate before, or 2) the first valid hourly emission rate after, the period of missing data.

Calculation of 30-day rolling average	Compliance will be determined on a 30 boiler operating day rolling average basis. All 30-day rolling averages shall be calculated as specified in 40 CFR §63.10021(b) and Equation 8: $\textit{Boiler operating day average} = \frac{\sum_{i=1}^n Her_i}{n} \textit{ (Eq. 8)}$ Where Her_i is the hourly emissions rate for hour i (combined total emissions for all boilers) and n is the number of hourly emissions rate values collected over 30 boiler operating days. Note: “Boiler operating day” means a 24-hour period that begins at midnight and ends the following midnight during which any fuel is combusted at any time in any of the boilers. It is not necessary for the fuel to be combusted the entire 24-hour period.
Operational requirements for Sulfur Dioxide (SO₂) Monitoring Systems	For each boiler to demonstrate continual compliance with the applicable sulfur dioxide emissions limitations, the in-stack sulfur dioxide monitoring systems shall be fully operational for at least 95% of the operational time of the monitored boiler during any calendar quarter. An operational availability of less than this amount may be considered the basis for declaring the source to be in noncompliance with the applicable monitoring requirements, unless the reasons for the failure to maintain this level of operational availability are accepted by this division as being legitimate malfunctions of the instruments.

Appendix 2: PES B-334-1 SO₂ Monitoring

Stack or Flow Diagram Points	Tail Gas Incinerator (Vent B)
Description of Monitoring Protocol	An extractive sampling system or equivalent monitor shall continuously measure the H ₂ S composition in the Shell Claus Off-gas Treatment (SCOT) process overhead stream entering the Tail Gas Incinerator. The gas flow rate into the incinerator shall be continuously monitored, and the distributed control system shall use the H ₂ S composition and the flow rate (differential pressure or equivalent device) to calculate the SO ₂ emission rate in lb/hr for a 24-hour block average. Process operational time does not include periods of Sulfur Recovery Plant outages. Monitoring data recorded during periods of monitoring system breakdown, repairs, calibration checks, zero and span adjustments, shall not be included in the data averages. In the event of an analyzer outage or Claus unit upset requiring direct venting to the incinerator, engineering evaluation and calculations will determine the lb/hr SO ₂ emissions using actual operational data from the Claus and SCOT units.
Equipment and Installation	Hydrogen sulfide analyzer and flow meter located at the inlet to the tail gas incinerator.
Measurement Frequency	Continuous (at least once every 15 minutes)
Minimum Data Availability	The SO ₂ monitoring system shall be fully operational for at least 95% of the operational time of the incinerator during each semiannual reporting period.
QA/QC Practices	Calibrate and maintain all monitoring equipment in accordance with manufacturer's specifications.

Appendix 3: PES B-351-5 SO₂ Monitoring

Stack or Flow Diagram Points	Cold Flare (Vent B) and Warm Flare (Vent C)
Description of Monitoring Protocol	Excess gas which cannot be safely utilized in the Coal Gasification Process is relieved to one of two vent header systems, where that gas is then routed to one of two corresponding natural gas assisted flares for combustion, i.e., Cold Flare and Warm Flare. Hourly SO₂ emissions from the flares are calculated during these events by using the following protocol: 1. Control valve operating positions (percentage valve open) and control valve upstream pressures are used to calculate volumetric flow rate of the gas stream routed to the flare(s). 2. Known plant gas stream compositions are used to calculate sulfur content of the gas stream routed to the flare(s). 3. Total conversion (100%) of sulfur in the gas stream routed to the flare(s) to SO₂ after combustion is used to determine final SO₂ emissions from the flare(s). For each hour, the SO₂ emission rate is calculated automatically by the plant's Distributed Control System using items 1, 2, and 3.
Equipment and Installation	Control valves and pressure transmitters located upstream of each flare.
Measurement Frequency	Continuous (at least once every 15 minutes)
Calculation of 30-day rolling average	Compliance will be determined on a 30 operating day rolling average basis. All 30-day rolling averages shall be calculated as specified in the following equation: $30 \text{ operating day average} = \frac{\sum_{i=1}^n Her_i}{n}$ Where Her_i is the hourly emissions rate for hour i (combined total emissions for cold and warm flares) and n is the number of hourly emissions rate values (including periods with no SO₂ emissions) collected over 30 operating days. "Operating day" means a 24-hour period that begins at midnight and ends the following midnight during which any synthesis gas is produced by the gasifiers. It is not necessary for synthesis gas to be produced during the entire 24-hour period.
Minimum Data Availability	The SO ₂ monitoring system shall be fully operational for at least 95% of the operational time of the flare during each semiannual reporting period.
QA/QC Practices	Valve operating positions: An annual field review will be completed for each control valve. Each flare valve will be verified either during process-related opening or by conducting a manual valve calibration check. Either (1) the process-related verification is completed by verifying the DCS-indicated percent open matches the field-observed percent open; or (2) a manual verification is completed by isolating the selected valve using manual valves as available (the isolated control valve will be given a DCS command to open to a set percentage, and a field operator will visually verify that the correct valve position is achieved). Valve upstream pressures: the pressure transmitters are used as input parameters to critical process control loops. Normal and ongoing operations, in conjunction with operators' experience, will ensure proper operation of the pressure transmitters. Any abnormal function in these devices would require corrective action as part of normal plant operations.

Reserved – Superseded by SIP Operating Permit 083740

Attachment B: SIP Permit 082237, Amendment #1 Redline/Strikeout

**STATE OF TENNESSEE
AIR POLLUTION CONTROL BOARD
DEPARTMENT OF ENVIRONMENT AND CONSERVATION
NASHVILLE, TENNESSEE**

PERMIT TO OPERATE AIR CONTAMINANT SOURCE(S)

Permit Number: 082237 (Amendment #1)

Facility (Permittee): Eastman Chemical Company

Facility ID: 82-0003

Facility Address: 200 South Wilcox Drive, Kingsport
Sullivan County

Facility Classification: Title V

Federal Requirements: SIP

Facility Description: Emission Sources Identified in Section I of this Permit

Operating Permit 082237, (Amendment #1), consisting of 1615 pages, is hereby issued ~~June 11, 2025~~ May 13, 2026, pursuant to the Tennessee Air Quality Act and by the Technical Secretary, Tennessee Air Pollution Control Board, Department of Environment and Conservation. The holder of this permit shall comply with the conditions contained in this permit as well as all applicable provisions of the Tennessee Air Pollution Control Regulations (TAPCR).

Michelle W. Owenby
Technical Secretary
Tennessee Air Pollution Control Board

No Authority is Granted by this Permit to Operate, Construct, or Maintain any Installation in Violation of any Law, Statute, Code, Ordinance, Rule, or Regulation of the State of Tennessee or any of its Political Subdivisions.

Section I – Sources Included in this Operating Permit

FACILITY DESCRIPTION			
Source Number	Source Description	Status	Control Device/Equipment
01	Boilers 18-24 (MSOP-02, PES B-83-1)	Active	Dry Sorbent Injection (Boilers 23 and 24)
131	Boilers 30-31 (MSOP-26, PES B-325-1)	Active	Spray Dryer Absorber and ESP (Boiler 30), Spray Dryer Absorber and Baghouse (Boiler 31)
168	Tail Gas Incinerator (MSOP-17, PES B-334-1)	Active	N/A
171	Cold and Warm Flares (MSOP-17, PES B-351-5)	Active	N/A
224	Organic Acids & Anhydrides Manufacturing, Vents B, C, E, I, and K (MSOP-23, PES B-55-1)	Active	N/A
282	Solid/Liquid Chemical Waste Incinerators (MSOP-32, PES B-248-1)	Active	Rod Scrubber
283	Liquid Chemical Waste Incinerator (MSOP-32, PES B-248-2)	Active	Rod Scrubber

Section II – Permit Record

Permit Type	Description of Permit Action	Issue Date
Initial	Initial SIP permit issuance	June 11, 2025
<u>Amendment #1</u>	<u>Amendment #1 was issued to clarify how the contingency measures are triggered in Condition G4, to correct the applicable Clean Air Act reference for contingency measures in Condition G4, to correct the SO₂ emission limits in Condition S3-1, and to reference the updated monitoring requirements of SIP permit 083740 for Condition S5-1 and Appendix 5.</u>	<u>May 13, 2026</u>

Section III - General Permit Conditions

G1. Reserved.

G2. General Recordkeeping Requirements

The information contained in logs, records, and submittals required by this permit shall be kept at the facility's address, unless otherwise noted, and provided to the Technical Secretary or a Division representative upon request. Computer-generated logs are acceptable. Compliance is assured by retaining the logs, records, and submittals specified in this permit for a period of not less than five years at the facility's address.

TAPCR 1200-03-10-.02(2)(a)

G3. Submittals

Unless otherwise specified within this permit, the permittee shall submit, preferably via email and in Adobe Portable Document format (PDF), all applicable plans, checklists, certifications, notifications, test protocols, reports, and applications to the attention of the following Division Programs at the email addresses indicated in the table below:

Permitting Program	Compliance Validation Program	Field Services Program
• Notifications • Startup certifications • Applications • NSPS reports • MACT/GACT/NESHAP reports • Emission statements • Construction permit extension requests	• Test protocols • Emission test reports • Visible emission evaluation reports	• Semiannual reports • Annual compliance certifications/status reports
Division of Air Pollution Control Davy Crockett Tower, 7 th Floor 500 James Robertson Parkway Nashville, TN 37243 Air.Pollution.Control@tn.gov		

The permittee shall submit the information identified above as requested in this permit. In lieu of submitting this information to the email addresses above, the permittee may submit the information to the attention of the respective Division Programs at the mailing addresses listed above.

TAPCR 1200-03-09-.03(8)

G4. Contingency Measures

Upon notification by the Technical Secretary that a reference monitor for the area has registered four validated ambient SO₂ concentrations in excess of the standard (75 parts per billion, 99th percentile of daily maximum one-hour average concentrations determined in accordance with 40 CFR 50, Appendix T) in any calendar year during ~~any~~the maintenance period ~~approved pursuant to CAA §§175a(a) and (b),~~ the permittee shall undertake a full system audit of all emissions units subject to control under this plan. The permittee must submit a written system audit report within 30 days of the notification. The system audit report must detail the operating parameters of all emissions units, including modeled emission units that were excluded from the SIP, for four 10-day periods up to and including the date upon which the reference monitor registered each exceedance, together with recommended provisional SO₂ emission control strategies for each affected unit and evidence that these control strategies have been deployed, as appropriate. Upon consultation with the Technical Secretary, the permittee shall develop and implement operational changes as necessary to prevent future monitored violations of the standard. These changes may include fuel switching, physical or operational reduction of production capacity, or other changes as appropriate. If a permit modification is deemed necessary, any changes to existing permit conditions shall follow the applicable procedures of TAPCR 1200-03-09. If an emission source is found to be noncompliant with a SIP emission limit, the Technical Secretary will, in addition to conducting enforcement proceedings to bring the source into compliance with its SIP limit, determine whether additional limits must be added to the SIP to meet the requirements of section ~~172(e)(9)~~175A of the Clean Air Act.

TAPCR 1200-03-09-.03(8)

Section IV - Source Specific Permit Conditions

Source Number	Source Description
01	Boilers 18-24 (MSOP-02, PES B-83-1)
131	Boilers 30-31 (MSOP-26, PES B-325-1)

S1-1. Emission Limitation(s)

On and after September 1, 2023, sulfur dioxide (SO₂) emitted from this source shall not exceed 1,248 lb/hr (combined limit for all boilers, 30-day rolling average).

TAPCR 1200-03-09-.03(8), 40 CFR §§51.110 – 51.112, Condition 1 of SIP permit 080222.

Compliance Method: Compliance with this condition shall be assured as specified in Appendix 1.

S1-2. Operation of Dry Sorbent Injection

On and after March 1, 2023, the permittee shall operate and maintain a dry sorbent injection (DSI) system to reduce SO₂ emissions from B-83 Boilers 23 and 24. The permittee shall operate, maintain and repair the control device as required to maintain and assure compliance with the specified emission limits. All periods of nonoperation of the DSI and records of all repair and maintenance activities shall be recorded in a suitable permanent form and kept available for inspection by the Technical Secretary or an authorized representative. These records must be retained for a period of not less than five years. Periods of nonoperation of the DSI and the date each maintenance and repair activity began shall be entered in the log no later than seven days following the start of the period of nonoperation or maintenance and repair maintenance activity, and the completion date shall be entered in the log no later than seven days after activity completion.

TAPCR 1200-03-09-.03(8), 40 CFR §§51.110 – 51.112, Condition 2 of SIP permit 080222.

S1-3. Periodic Reporting

On and after the issue date of this permit, the permittee shall submit reports of any monitoring or recordkeeping required by this permit with the semiannual reports required by the applicable Title V Operating Permit. Periodic reports shall include the following information:

- A. 30-day average SO₂ emission rate for each day in the reporting period. A summary report¹ of this data is acceptable provided there is sufficient information to enable the Technical Secretary to evaluate compliance.
- B. All instances of deviations from these permit requirements must be clearly identified in the reports. Deviation reports shall include a description of the deviation; the duration of the event; the explanation or probable cause; and identification of corrective actions or preventative measures undertaken to correct the deviation.
- C. The owner or operator shall submit CEMS downtime reports in accordance with Rule 1200-03-10-.02(2). If there are no excess emissions or CEMS downtime during the reporting period, the owner or operator shall submit a report to that effect.

¹ For all emissions reporting requirements identified in this permit, the minimum requirements for summary reporting are the highest measured emission rate, the date on which the measurement occurred, and either a report of all deviations or a statement that no deviations occurred during the reporting period. For reports of parametric monitoring, the minimum requirements for summary reporting are the highest or lowest measured value, as applicable, the date on which the measurement occurred, and either a report of all deviations or a statement that no deviations occurred during the reporting period.

This report must be certified by a responsible official consistent with TAPCR 1200-03-09-.02(11)(d)4.

TAPCR 1200-03-09-.03(8) and 1200-03-10-.02(1)(a)

Source Number	Source Description
168	Tail Gas Incinerator (MSOP-17, PES B-334-1)

S2-1. Emission Limitation(s)

On and after September 1, 2023, SO₂ emitted from this source shall not exceed 21.8 lb/hr (24-hour block average).

TAPCR 1200-03-09-.03(8), 40 CFR §§51.110 – 51.112, Condition 1 of SIP permit 080222.

Compliance Method: Compliance with this condition shall be assured as specified in Appendix 2.

S2-2. Periodic Reporting

On and after the issue date of this permit, the permittee shall submit reports of any monitoring or recordkeeping required by this permit with the semiannual reports required by the applicable Title V Operating Permit. Periodic reports shall include the following information:

- A. 24-hour average SO₂ emission rate for each day in the reporting period. A summary report of this data is acceptable provided there is sufficient information to enable the Technical Secretary to evaluate compliance.
- B. All instances of deviations from these permit requirements must be clearly identified in the reports. Deviation reports shall include a description of the deviation; the duration of the event; the explanation or probable cause; and identification of corrective actions or preventative measures undertaken to correct the deviation.
- C. The owner or operator shall submit CEMS downtime reports in accordance with Rule 1200-03-10-.02(2). If there are no excess emissions or CEMS downtime during the reporting period, the owner or operator shall submit a report to that effect.

This report must be certified by a responsible official consistent with TAPCR 1200-03-09-.02(11)(d)4.

TAPCR 1200-03-09-.03(8) and 1200-03-10-.02(1)(a)

Source Number	Source Description
171	Cold Flare and Warm Flare for South Production Areas (MSOP-17, PES B-351-5)

S3-1. Emission Limitation(s)

A. On and after July 11, 2025, SO₂ emitted from this source shall not exceed 16.28 lb/hr (30-day rolling average).

B. On and after June 12, 2026, SO₂ emitted from this source shall not exceed 14.6 lb/hr (30-day rolling average).

B.C. On and after June 11, 2026, SO₂ emitted from this source shall not exceed 48 tons during any period of 12 consecutive months.

TAPCR 1200-03-09-.03(8), 40 CFR §§51.110 – 51.112

Compliance Method: Compliance with this condition shall be assured as follows:

- A. Compliance with the hourly emission limit shall be assured as specified in Appendix 3 of this permit.
- B. The permittee shall calculate actual emissions of sulfur dioxide emitted during each period of 12 consecutive months and maintain records of the emissions in the format shown in Appendix 4 of this permit.

TAPCR 1200-03-10-.02(1)(a), 1200-03-10-.02(2)(a)

S3-2. Periodic Reporting

On and after the issue date of this permit, the permittee shall submit reports of any monitoring or recordkeeping required by this permit with the semiannual reports required by the applicable Title V Operating Permit. Periodic reports shall include the following information:

- A. 30-day average SO₂ emission rate for each day in the reporting period. A summary report of this data is acceptable provided there is sufficient information to enable the Technical Secretary to evaluate compliance.
- B. 12-month rolling total SO₂ emissions for each month in the reporting period. A summary report of this data is acceptable provided there is sufficient information to enable the Technical Secretary to evaluate compliance.
- C. All instances of deviations from these permit requirements must be clearly identified in the reports. Deviation reports shall include a description of the deviation; the duration of the event; the explanation or probable cause; and identification of corrective actions or preventative measures undertaken to correct the deviation.

This report must be certified by a responsible official consistent with TAPCR 1200-03-09-.02(11)(d)4.

TAPCR 1200-03-09-.03(8) and 1200-03-10-.02(1)(a)

S3-3. This emission limits and other requirements established by this permit supersede the limits previously established in SIP permit 080222.

TAPCR 1200-03-09-.03(8)

Source Number	Source Description
224	Organic Acids & Anhydrides Manufacturing, Vents B, C, E, I, and K (MSOP-23, PES B-55-1)

S4-1. Emission Limitation(s)

On and after March 8, 2026, SO₂ emitted from this source shall not exceed 6.74 lb/hr (one-hour average).

TAPCR 1200-03-09-.03(8), 40 CFR §§51.110 – 51.112

Compliance Method: Compliance with this condition shall be assured as follows:

- A. The permittee shall conduct or have conducted performance tests to determine the amount of sulfur dioxide emitted from this source. The initial performance test shall be completed no later than June 6, 2026. For Vent E (not in service as of the issue date of this permit), an initial performance test shall be conducted no later than 180 days following any restart of the associated process. The permittee shall provide, at no expense to the Technical Secretary:
- a) Sampling ports adequate for test methods applicable to such facility.
 - b) Safe sampling platform(s)
 - c) Safe access to sampling platform(s)
 - d) Utilities for sampling and testing equipment

TAPCR 1200-03-10-.01

- B. For Vent B, the performance test shall consist of at least three test runs. For each test run, reference method test data shall be collected every 15 minutes over the entire batch cycle. The test data shall be used to generate an emissions curve that is representative of the SO₂ emission rate in lb/hr over the duration of the batch cycle.
- C. For Vents C, E, I, and K, each performance test shall consist of three separate one-hour runs using the applicable test method. For the purpose of determining compliance with the applicable standard, the arithmetic means of the results of the three runs shall apply. In the event that a sample is accidentally lost or conditions occur in which one of the three runs must be discontinued because of a forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances beyond the owner or operator's control, compliance may, upon the Technical Secretary's approval, be determined using the arithmetic mean of the results of the two other runs.

TAPCR 1200-03-10-.01(1)(a), (b), and (c)

- D. The permittee shall notify the Technical Secretary in writing of their intention to conduct the performance test at least 30 days before the performance test is initially scheduled to begin to allow the Technical Secretary to have an observer(s) present during the test.

In the event the permittee is unable to conduct the performance test on the date specified in the notification requirement in this condition, the permittee must notify the Technical Secretary as soon as practical prior to the scheduled performance test date and specify the date when the performance test is rescheduled. This notification of delay in conducting the performance test shall not relieve the permittee of legal responsibility for compliance with any other applicable provisions of any other applicable Federal, State, or local requirement, nor will it prevent the Technical Secretary from implementing or enforcing the terms of this permit.

TAPCR 1200-03-10-.01 and 1200-03-10-.02(c)

- E. The permittee shall develop and submit a site-specific test plan for approval to the Technical Secretary at least 30 calendar days before the performance test is scheduled to take place, simultaneously with the notification of intent to conduct a performance test. The site-specific test plan shall include a test program summary, the test schedule, data quality objectives (i. e., the pretest expectations of precision, accuracy, and completeness of data), and an internal and external quality assurance (QA) program.

TAPCR 1200-03-10-.01

- F. The performance test shall be conducted, and data reduced in accordance with the methods and procedures specified in 40 CFR part 60 Appendix A.

TAPCR 1200-03-10-.01

- G. The permittee shall report the results of the performance test to the Technical Secretary within 60 days following the completion of the performance test. The report shall include the relevant process data (material input rate, production rate, etc., as appropriate) recorded during the test.

TAPCR 1200-03-10-.01

- H. Upon submittal of the test report, the permittee shall calculate hourly emissions from the performance test results and batch data using the plant's distributed control system.

TAPCR 1200-03-10-.01

- I. The permittee shall conduct subsequent performance tests no later than 180 days following any process change that would increase emissions from any vent². If there are no process changes that would increase SO₂ emissions, subsequent performance tests shall be conducted no later than 60 calendar months after the previous test.

TAPCR 1200-03-10-.01

S4-2. Periodic Reporting

On and after August 5, 2026, the permittee shall submit reports of any monitoring or recordkeeping required by this permit with the semiannual reports required by the applicable Title V Operating Permit. Periodic reports shall include the following information:

- A. SO₂ emission rate (lb/hr) for each day of the reporting period. A summary report of this data is acceptable provided there is sufficient information to enable the Technical Secretary to evaluate compliance.
- B. A description of any process changes that would increase SO₂ emissions, or a statement that there were no process changes during the reporting period that would increase SO₂ emissions from the source.
- C. All instances of deviations from these permit requirements must be clearly identified in the reports. Deviation reports shall include a description of the deviation; the duration of the event; the explanation or probable cause; and identification of corrective actions or preventative measures undertaken to correct the deviation.

This report must be certified by a responsible official consistent with TAPCR 1200-03-09-.02(11)(d)4.

TAPCR 1200-03-09-.03(8) and 1200-03-10-.02(1)(a)

Source Number	Source Description
282	Solid/Liquid Chemical Waste Incinerators (MSOP-32, PES B-248-1)

S5-1. Emission Limitation(s)

On and after September 1, 2023, SO₂ emitted from this source shall not exceed 15.2 lb/hr (combined limit for both rotary kilns, 30-day rolling average).

TAPCR 1200-03-09-.03(8), 40 CFR §§51.110 – 51.112, Condition 1 of SIP permit 080222.

² If a process change increases emissions from the batch reactors, then all vents must be tested to ensure that SO₂ emissions do not increase in other areas of the process. For other changes, Eastman must specify which vents will be tested in the site-specific test plan.

Compliance Method: Compliance with this condition shall be assured as specified in ~~Appendix 5~~ SIP operating permit 083740.

S5-2. Periodic Reporting

On and after the issue date of this permit, the permittee shall submit reports of any monitoring or recordkeeping required by this permit with the semiannual reports required by the applicable Title V Operating Permit. Periodic reports shall include the following information:

- A. 30-day average SO₂ emission rate for each day in the reporting period. A summary report of this data is acceptable provided there is sufficient information to enable the Technical Secretary to evaluate compliance.
- B. All instances of deviations from these permit requirements must be clearly identified in the reports. Deviation reports shall include a description of the deviation; the duration of the event; the explanation or probable cause; and identification of corrective actions or preventative measures undertaken to correct the deviation.

This report must be certified by a responsible official consistent with TAPCR 1200-03-09-.02(11)(d)4.

TAPCR 1200-03-09-.03(8) and 1200-03-10-.02(1)(a)

Source Number	Source Description
283	Liquid Chemical Waste Incinerator (MSOP-32, PES B-248-2)

S6-1. Emission Limitation(s)

On and after September 1, 2023, SO₂ emitted from this source shall not exceed 2.0 lb/hr (30-day rolling average).

TAPCR 1200-03-09-.03(8), 40 CFR §§51.110 – 51.112, Condition 1 of SIP permit 080222

Compliance Method: Compliance with this condition shall be assured as specified in Appendix 5.

S6-2. Periodic Reporting

On and after the issue date of this permit, the permittee shall submit reports of any monitoring or recordkeeping required by this permit with the semiannual reports required by the applicable Title V Operating Permit. Periodic reports shall include the following information:

- A. 30-day average SO₂ emission rate for each day in the reporting period. A summary report of this data is acceptable provided there is sufficient information to enable the Technical Secretary to evaluate compliance.
- B. All instances of deviations from these permit requirements must be clearly identified in the reports. Deviation reports shall include a description of the deviation; the duration of the event; the explanation or probable cause; and identification of corrective actions or preventative measures undertaken to correct the deviation.

This report must be certified by a responsible official consistent with TAPCR 1200-03-09-.02(11)(d)4.

TAPCR 1200-03-09-.03(8) and 1200-03-10-.02(1)(a)

(end of conditions)

Appendix 1: B-83 and B-325 SO₂ Monitoring

Stack or Flow Diagram Points	PES B-83-1, Boilers 18 through 24 PES B-325-1, Boilers 30 and 31
Pollutants	SO ₂ (combined total emissions for all boilers)
Description of Monitoring Protocol	The source owner or operator shall install, maintain, operate, and submit reports of sulfur dioxide emissions from continuous in-stack monitoring systems for sulfur dioxide (SO₂) and either oxygen (O₂) or carbon dioxide as the diluent gas. The sensors of these monitoring systems shall be located in representative areas of the effluent gas stream of the boiler. Electronic signal combining systems shall be installed to convert the output of the pollutant monitors into units of the applicable emission standards. The in-stack sulfur dioxide monitoring systems shall meet all the requirements of 40 CFR Part 60 Appendix B Performance Specification 2 or 40 CFR Part 75 Appendix A. SO₂ emission rates in lb/hr shall be calculated as follows: Boilers 23-24 and 30-31: The source owner or operator shall install, certify, operate, and maintain a SO₂ continuous emission monitoring system and a flow monitoring system with an automated data acquisition and handling system for measuring and recording SO₂ concentration (in parts per million), volumetric gas flow (in standard cubic feet per hour), and SO₂ mass emissions (in lb/hr) discharged to the atmosphere. The in-stack flow monitoring systems shall meet all the requirements of 40 CFR Part 60 Appendix B Performance Specification 6 or 40 CFR Part 75 Appendix A. Boilers 18-22: 40 CFR 60 Appendix A, Method 19 shall be used to determine hourly average emissions of sulfur dioxide expressed as pounds per million Btu heat input. Hourly average emissions of sulfur dioxide expressed as pounds per hour shall be determined by multiplying each hourly average sulfur dioxide emission rate expressed as pounds per million Btu by the respective hourly average heat input. The heat input for Boilers 18-22 will be computed by determining the energy rise of the steam across the individual boiler. The energy rise will be calculated as the difference in the energy of the output steam and the energy of the feedwater input. Boiler outlet pressure, temperature and flow along with the inlet feedwater temperature and flow will be used to determine the total energy change across the boiler. The energy of the outlet steam will be approximated by multiplying the boiler outlet steam flow by steam enthalpy. Enthalpy for the outlet steam conditions shall be determined using the ASME International Steam Tables for Industrial Use at the steam outlet pressure and temperature. Boiler outlet energy will be adjusted for an assumed boiler efficiency of 85%. The feedwater energy will be calculated by multiplying the inlet feedwater flow by the inlet feedwater enthalpy. The feedwater enthalpy will be determined using the enthalpy of saturated water from the ASME Steam Tables at the boiler economizer inlet feedwater temperature. The boiler heat will be determined by subtracting the boiler inlet energy from the boiler outlet energy. This heat input will be transmitted to the SO₂ CEMS data acquisition and control system (DAHS) to use for computation of the sulfur dioxide mass emission rate in pounds per hour. Missing emissions data shall be addressed as follows: Data is considered missing if there are fewer than two valid 15-minute averages during the hour. Data shall be substituted for the duration of each missing data period by using the higher value of: 1) the last valid hourly emission rate before, or 2) the first valid hourly emission rate after, the period of missing data.

Calculation of 30-day rolling average	Compliance will be determined on a 30 boiler operating day rolling average basis. All 30-day rolling averages shall be calculated as specified in 40 CFR §63.10021(b) and Equation 8: $\text{Boiler operating day average} = \frac{\sum_{i=1}^n Her_i}{n} \text{ (Eq. 8)}$ Where Her_i is the hourly emissions rate for hour i (combined total emissions for all boilers) and n is the number of hourly emissions rate values collected over 30 boiler operating days. Note: “Boiler operating day” means a 24-hour period that begins at midnight and ends the following midnight during which any fuel is combusted at any time in any of the boilers. It is not necessary for the fuel to be combusted the entire 24-hour period.
Operational requirements for Sulfur Dioxide (SO₂) Monitoring Systems	For each boiler to demonstrate continual compliance with the applicable sulfur dioxide emissions limitations, the in-stack sulfur dioxide monitoring systems shall be fully operational for at least 95% of the operational time of the monitored boiler during any calendar quarter. An operational availability of less than this amount may be considered the basis for declaring the source to be in noncompliance with the applicable monitoring requirements, unless the reasons for the failure to maintain this level of operational availability are accepted by this division as being legitimate malfunctions of the instruments.

Appendix 2: PES B-334-1 SO₂ Monitoring

Stack or Flow Diagram Points	Tail Gas Incinerator (Vent B)
Description of Monitoring Protocol	An extractive sampling system or equivalent monitor shall continuously measure the H ₂ S composition in the Shell Claus Off-gas Treatment (SCOT) process overhead stream entering the Tail Gas Incinerator. The gas flow rate into the incinerator shall be continuously monitored, and the distributed control system shall use the H ₂ S composition and the flow rate (differential pressure or equivalent device) to calculate the SO ₂ emission rate in lb/hr for a 24-hour block average. Process operational time does not include periods of Sulfur Recovery Plant outages. Monitoring data recorded during periods of monitoring system breakdown, repairs, calibration checks, zero and span adjustments, shall not be included in the data averages. In the event of an analyzer outage or Claus unit upset requiring direct venting to the incinerator, engineering evaluation and calculations will determine the lb/hr SO ₂ emissions using actual operational data from the Claus and SCOT units.
Equipment and Installation	Hydrogen sulfide analyzer and flow meter located at the inlet to the tail gas incinerator.
Measurement Frequency	Continuous (at least once every 15 minutes)
Minimum Data Availability	The SO ₂ monitoring system shall be fully operational for at least 95% of the operational time of the incinerator during each semiannual reporting period.
QA/QC Practices	Calibrate and maintain all monitoring equipment in accordance with manufacturer's specifications.

Appendix 3: PES B-351-5 SO₂ Monitoring

Stack or Flow Diagram Points	Cold Flare (Vent B) and Warm Flare (Vent C)
Description of Monitoring Protocol	Excess gas which cannot be safely utilized in the Coal Gasification Process is relieved to one of two vent header systems, where that gas is then routed to one of two corresponding natural gas assisted flares for combustion, i.e., Cold Flare and Warm Flare. Hourly SO₂ emissions from the flares are calculated during these events by using the following protocol: 1. Control valve operating positions (percentage valve open) and control valve upstream pressures are used to calculate volumetric flow rate of the gas stream routed to the flare(s). 2. Known plant gas stream compositions are used to calculate sulfur content of the gas stream routed to the flare(s). 3. Total conversion (100%) of sulfur in the gas stream routed to the flare(s) to SO₂ after combustion is used to determine final SO₂ emissions from the flare(s). <u>For each hour, the SO₂ emission rate is calculated automatically by the plant's Distributed Control System using items 1, 2, and 3.</u>
Equipment and Installation	Control valves and pressure transmitters located upstream of each flare.
Measurement Frequency	Continuous (at least once every 15 minutes)
Calculation of 30-day rolling average	Compliance will be determined on a 30 operating day rolling average basis. All 30-day rolling averages shall be calculated as specified in the following equation: $30 \text{ operating day average} = \frac{\sum_{i=1}^n Her_i}{n}$ Where Her_i is the hourly emissions rate for hour i (combined total emissions for cold and warm flares) and n is the number of hourly emissions rate values (including periods with no SO₂ emissions) collected over 30 operating days. "Operating day" means a 24-hour period that begins at midnight and ends the following midnight during which any synthesis gas is produced by the gasifiers. It is not necessary for synthesis gas to be produced during the entire 24-hour period.
Minimum Data Availability	The SO ₂ monitoring system shall be fully operational for at least 95% of the operational time of the ~~incinerator flare~~ during each semiannual reporting period.
QA/QC Practices	Valve operating positions: An annual field review will be completed for each control valve. Each flare valve will be verified either during process-related opening or by conducting a manual valve calibration check. Either (1) the process-related verification is completed by verifying the DCS-indicated percent open matches the field-observed percent open; or (2) a manual verification is completed by isolating the selected valve using manual valves as available (the isolated control valve will be given a DCS command to open to a set percentage, and a field operator will visually verify that the correct valve position is achieved). Valve upstream pressures: the pressure transmitters are used as input parameters to critical process control loops. Normal and ongoing operations, in conjunction with operators' experience, will ensure proper operation of the pressure transmitters. Any abnormal function in these devices would require corrective action as part of normal plant operations.

Appendix 5: PES B-248-1 and 248-2 SO₂ Monitoring

Stack or Flow Diagram Points	PES B-248-1: Vents D (Rotary Kiln #1) and E (Rotary Kiln #2) PES B-248-2: Vent A (Liquid Chemical Incinerator)																								
Pollutants	SO ₂																								
Control Equipment	SO ₂ emissions from the solid/liquid chemical waste incinerators (82-0003-282, PES B-248-1) and liquid chemical waste incinerator (82-0003-283, PES B-248-2) shall be continuously controlled by wet scrubbers (Croll Reynolds Clean Air Technologies multi-rod scrubber for each emission point).																								
Description of Monitoring Protocol	1. Continuous Monitoring of Rod Scrubber Underflow pH A pH sensor and transmitter are installed in either the rod scrubber underflow line or the sump (which receives the rod scrubber underflow) before any caustic or additional water is added in the recycle loop. The distributed control system (DCS) will receive pH values from the transmitter, and a data archival system shall record the pH reading four or more times equally spaced over the hour. The permittee shall operate and maintain continuous monitoring systems (CMS) for scrubbing liquid pH and shall operate all CMS to document compliance with the applicable operating parameter limits under this section as follows: (a) The permittee shall install and operate the CMS in compliance with the manufacturer's written specifications or recommendations for installation, operation, and calibration. (b) The CMS must sample the regulated parameter without interruption and evaluate the detector response at least once each 15 seconds, and compute and record the average values at least every 60 seconds. (c) The span of the CMS detector shall not be exceeded. (d) Each parameter shall be monitored, and the permittee shall calculate SO₂ emissions from the sulfur feed rate and rod scrubber underflow pH. (e) The permittee shall perform inspections and maintenance of the scrubbers as recommended by the manufacturer. 2. Determination of Sulfur Dioxide Removal Efficiency A series of computer simulations using a commercially available software package (ASPEN®) have been conducted to establish the rod scrubber underflow pH as the key process variable that indicates sulfur dioxide control efficiency. Computer simulations were conducted at varying sulfur loading conditions and correlation curves relating pH and scrubber control efficiency were derived. The correlation curve for the highest sulfur feed modeled was used to develop the relationship programmed into the DCS. The DCS relationship is programmed as a series of straight lines plotted between the following points: <table><thead><tr><th>Point</th><th>Rod Scrubber Underflow pH</th><th>Sulfur Dioxide Removal Efficiency (%)</th></tr></thead><tbody><tr><td>1</td><td>0.00</td><td>0.0</td></tr><tr><td>2</td><td>4.13</td><td>0.0</td></tr><tr><td>3</td><td>4.20</td><td>67.2</td></tr><tr><td>4</td><td>4.42</td><td>82.8</td></tr><tr><td>5</td><td>4.74</td><td>90.6</td></tr><tr><td>6</td><td>5.64</td><td>98.1</td></tr><tr><td>7</td><td>14.00</td><td>98.1</td></tr></tbody></table> 3. Determination of Sulfur Feed Rates Waste stream sulfur concentrations are determined either from process knowledge or from analysis using ASTM method D4239 or equivalent and are entered into the Environmental Management Information System (EMIS). EMIS provides information to the DCS regulating the feed of waste. As waste streams are burned, sulfur feed rates are calculated by the DCS using waste and fuel mass flow sensors that are required by 40 CFR 60 Subpart EEE.	Point	Rod Scrubber Underflow pH	Sulfur Dioxide Removal Efficiency (%)	1	0.00	0.0	2	4.13	0.0	3	4.20	67.2	4	4.42	82.8	5	4.74	90.6	6	5.64	98.1	7	14.00	98.1
Point	Rod Scrubber Underflow pH	Sulfur Dioxide Removal Efficiency (%)																							
1	0.00	0.0																							
2	4.13	0.0																							
3	4.20	67.2																							
4	4.42	82.8																							
5	4.74	90.6																							
6	5.64	98.1																							
7	14.00	98.1																							

Description of Monitoring Protocol- (Continued)	~~4. Calculation of Stack Gas SO₂ Concentration-~~ ~~At a minimum of four equally spaced intervals in each hour, the DCS shall calculate the SO₂ emissions concentration using the stack gas flow rate (obtained from sensors required by 40 CFR 63 Subpart EEE), assuming all sulfur from Step #3 is converted to SO₂ and using the SO₂ control efficiency determined in Step #2. The hourly SO₂ concentration and annual emission rate are calculated using the following assumptions and equations:~~ ~~Assumptions:~~ ~~1. Standard conditions are 68° F and 1 atm;~~ ~~2. Mole weights: sulfur (S) = 32.06, sulfur dioxide (SO₂) = 64.06;~~ ~~3. SO₂ removal is based on the relationship established in Step #2;~~ ~~4. All sulfur feeds react completely to SO₂;~~ ~~5. Density of SO₂ gas at standard conditions = 0.1662 lb/ft³.~~ ~~SO₂ emission rate (lb/hr) = sulfur feed rate (lb/hr) x (64.06 lb SO₂/32.06 lb S) x (1 - SO₂ removal)~~ ~~30-day rolling average SO₂ emission rates will be calculated from hourly emission rates.~~
Averaging	~~One-hour averages shall be calculated from four or more equally spaced data averages over each one-hour period, except during periods of monitoring system breakdown, monitoring system repairs, and periods of non-operation of the source. During these periods, a valid one-hour average shall consist of at least two 15-minute averages. Data collected during periods of monitoring system breakdown, monitoring system repairs, required quality assurance or control periods, and periods of non-operation of the source shall not be included in the data averages. Compliance will be based on a 30-day rolling average basis. 30-day rolling averages shall be calculated as the arithmetic average of all valid one-hour averages over each 30-day period, beginning on midnight of the first day and ending at midnight on the 30th day. For a given 30-day averaging period, a valid average must include at least 75% percent of the measured values within the averaging period.~~
Monitoring Downtime Incidents	~~During periods of pH monitoring downtime, the sulfur dioxide removal efficiency shall be assumed to be zero in Step #2 above. Therefore, and pH monitoring system downtime incidents do not need to be reported as required by 40 CFR §64.9(a)(2)(ii). Any monitoring downtime incidents shall be reported in the semiannual reports, unless, in the case of a feed rate flow sensor, the feed line block valve is closed during the incident.~~
Minimum Data Availability	~~The SO₂ monitoring system shall be fully operational for at least 95% of the operational time of the incinerator during each semiannual reporting period.~~
QA/QC Practices	~~The pH sensors shall be calibrated once per month.~~
Reference	~~Operating Plan in the Title V application dated May 24, 2019, PES B-248-1, pages 25 and 26.~~ ~~Operating Plan in the Title V application dated September 28, 2017, PES B-248-2, pages 12 and 13.~~

Reserved – Superseded by SIP Operating Permit 083740

Attachment C: Redesignation Request Table 4-4 Redline

Table 4-4: Other Emission Limits Included in the SIP

Permit	Condition(s)	Affected Source	Limit/Control Measure	Associated Monitoring
PSD Construction Permit 966859F	6	PES B-253-1 Boilers 25 through 29 (82-0003-01, MSOP-02)	Only natural gas shall be used as fuel	None specified. Compliance with the fuel usage restriction is based on the design and construction of the boiler (natural gas feed lines and burners physically restrict the source's ability to burn other fuels).
SIP Operating Permit 082237	S1-1 through S1-3	PES B-83 Boilers 18 through 24 (82-0003-01, MSOP-02) and PES B-325 Boilers 30 and 31 (82-0003-131, MSOP-26)	1,248 lb/hr (30-day average, combined limit for all boilers) and associated monitoring	Operate, maintain, and repair a dry sorbent injection (DSI) system to reduce SO ₂ emissions from B-83 Boilers 23 and 24 as required to maintain and assure compliance with the specified emission limits. Calculate hourly emissions SO ₂ emissions from CEMS data and flow monitoring (B-83 Boilers 23 and 24 and B-325 Boilers 30 and 31) or from CEMS data and calculated heat input (B-83 Boilers 18 through 22).
	S5-1 and S5-2	B-248-1 Solid/Liquid Chemical Waste Incinerators (82-0003-282, MSOP-32)	15.2 lb/hr (30-day average, combined limit for both rotary kilns) and associated monitoring	Calculate hourly emissions from sulfur feed rate and scrubber pH using established algorithm. Continuously monitor scrubber pH and determine the waste stream sulfur concentrations from analysis or process knowledge.
	S6-1 and S6-2	B-248-2 Liquid Chemical Waste Incinerator (82-0003-283, MSOP-32)	2.0 lb/hr (30-day average) and associated monitoring	
	S2-1 and S2-2	B-334-1, Incinerator for Acid Gas Removal and Sulfur Recovery Plant (82-0003-168, MSOP-17)	21.8 lb/hr (24-hour block average) and associated monitoring	Continuously measure the gas composition and gas flow rate in the SCOT process overhead stream entering the tail gas incinerator and use the monitored parameters to calculate the SO ₂ emission rate.
	S4-1 and S4-2	B-55-1, Organic Acids & Anhydrides Manufacturing, Vents B, C, E, I, and K (82-0003-224, MSOP-23)	6.74 lb/hr and associated monitoring	Periodic stack testing.
	S3-1.B and S3-2	PES B-351-5, Coal Gasification Cold and Warm Flares (82-0003-171, MSOP-17)	~~14.6~~ 16.28 lb/hr (30 calendar day rolling average basis) and associated monitoring.	Continuously measure the gas composition and gas flow rate entering the flare and use the monitored parameters to calculate the SO ₂ emission rate.
PSD permit 955272F	4	PES B-325-1, Boiler 30	317 lb/hr (30 calendar day rolling average basis) and associated monitoring.	Calculate hourly SO ₂ emissions from CEMS data and flow monitoring, as required by permit 082237.
		PES B-325-1, Boiler 31	293 lb/hr (30 calendar day rolling average basis) and associated monitoring.	
Title V Operating Permit 574994 (Primester)	E5-1	82-0510-03, B-441-2, Vent C	1,000 parts per million by volume, dry basis (one hour average) and 0.25 pounds per hour (three-hour average)	Compliance is based upon parametric monitoring of the minimum scrubber flow rate (three-hour moving average of 1.0 gallons/minute) and minimum scrubber pH (24-hour block average value of 6.0).

Following our discussion a few weeks ago, I have done some more investigation into the sources of SO₂ at B-267 (OC-Batch; MSOP-25) and have discovered that the data I was provided earlier this year was not accurate. There is in fact only 1 process in B-267 that generates SO₂ emissions, namely the Benzimidazole process. I have summarized the updated information on that process below. The frequency of operation is significantly less than what we previously provided and likely would qualify as an intermittent source. Let me know if you have any questions or need any additional information on the Benzimidazole process.

- Benzimidazole is the only process that currently generates SO₂ at B-267.
- Emissions are estimated at 28.2 lbs/batch and is based on conversion of a sulfur containing additive to SO₂.
- Emissions occur during one distinct step in the process and that step typically takes around an hour to complete.
- Benzimidazole is a campaigned product and only 1 to 2 batches are required annually to meet customer demand.
- Emissions are routed to the #12 Caustic Scrubber, Vent ID A-L in PES OC-Batch in MSOP-25.
- Table below summarizes the times the SO₂ generating step occurred since January of 2017.

Year	Start Time	Stop Time	Total Time (Hrs)	Total SO2 Generated (lbs)
2017	12/11/2017 2:41	12/11/2017 7:41	5.0	28.2
	12/14/2017 16:33	12/14/2017 17:40	1.1	28.2
2018	No batches were produced			
2019	2/24/2019 9:20	2/24/2019 10:25	1.1	28.2
	2/27/2019 2:41	2/27/2019 2:54	0.2	28.2

2020	No batches were produced			
2021	4/29/2021 0:18	4/29/2021 1:04	0.8	28.2

Attachment F: Board Order 26-007

STATE OF TENNESSEE
AIR POLLUTION CONTROL BOARD

IN THE MATTER OF:

REDESIGNATION REQUEST OF THE
SULLIVAN COUNTY 2010 ONE-HOUR
SULFUR DIOXIDE NATIONAL AMBIENT
AIR QUALITY STANDARD
NONATTAINMENT AREA TO ATTAINMENT,
AMENDMENT TO SIP PERMIT 082237

)
)
)
)
)
)
)

ORDER NO. 26-007

BOARD ORDER

On June 11, 2025, the Tennessee Air Pollution Control Board approved a State Implementation Plan (SIP) revision requesting to redesignate the area back to attainment due to attaining monitoring data and permanent and enforceable control measures, including the control measures established by the issuance of SIP permit 082237 to Eastman Chemical Company on June 11, 2025.

The Tennessee Air Pollution Control Board approves the issuance of an amendment to SIP permit 082237 to correct the emission limit for one source at Eastman Chemical Company (Cold and Warm Flares, permit condition S3-1), to make minor corrections and clarifications to the permit's contingency measures and monitoring requirements, and to provide additional documentation to U. S. EPA in support of the redesignation request.

Approved on May 13, 2026, by the members of the Tennessee Air Pollution Control Board as follows:

Subject: Hankook Tire Manufacturing Tennessee, LP 63-0320
PSD Permit No: 979754

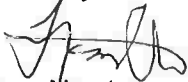

To Whom It May Concern:

As of January 30, 2026, Hankook Tire Manufacturing has completed more than 90% of construction activities as allowed by PSD Permit 979754. Due to incomplete machine installation and testing, we do not anticipate completion of all construction activities until after the PSD permit expires in June 2026.

Our anticipated completion date is September 30, 2026. In spite of that, Hankook Tire requests the allowed 18-month extension in order to account for any unanticipated delays in machine installation, troubleshooting and commissioning.

Should you require any additional information regarding this request, please do not hesitate to reach out to me by phone at 931-472-2699, ext. 1054 or via email at larry.newton@hankookn.com.

Sincerely,

Larry Newton
Environmental Unit Manager

Good morning, Chelsea,

I apologize for the delay in getting this information to your department. Larry's abrupt departure left a few items unresolved, and I was not aware that you were still awaiting these details.

Attached is the Excel file outlining the equipment currently delayed. Much of this equipment is fabricated in Korea and shipped to the U.S., so any upstream delays directly impact our installation timeline and ultimately our production start date.

In the spreadsheet, Column H ("Remarks") lists the estimated installation dates, and Column I lists the estimated production start dates. Please note that once installation is complete, we require 45 days of testing before the equipment can be used for production.

Please let me know if this information is sufficient for your review, or if additional details are needed to support the extension request. I appreciate your patience and the opportunity to provide what you need.

In regard to contact information, I will be the main point of contact going forward. Please let me know what I need to do to get this information updated.

If you have any questions, feel free to reach out by email or on my cell.

Thank you!
