

# Welcome!

# State of Tennessee Training: Energy Projects & Cost Avoidance

# State Facility Utility Management (SFUM)

Jeremy McBride  
Senior Data Analyst/Energy Consultant

Natalie Dallriva  
OEP Budget Administrator

# EnergyCAP

John Pierce, Director & SME  
Project Management Office

Beth Calehuff, Manager  
Customer Success

# Housekeeping

The Webinar is being recorded and will be distributed

Please enter questions into the 'Q&A'

If you have questions after the webinar, please reach out to the SFUM Team at [TDEC.SFUM@tn.gov](mailto:TDEC.SFUM@tn.gov)

A step-by-step guide will also be distributed

Additional Training Opportunity - EnergyCAP's Catalyst User Group Conference

April 25-27, 2023 in State College, PA

# Overview

## Energy Projects and Savings (AKA Cost Avoidance)

- Demonstrate how these features allow you to document an Energy Conservation Project
- Example project is LED Lighting Retrofit
- Using a demo database, but scenarios mimic existing

# Energy Projects

# Energy Projects

Found in the Buildings & Meters hierarchy

- Create at the Building level
- Summarized at higher Organization level(s)

### Edit Energy Project

... > HAPPY\_VALLEY [City of Happy Valley] > PARKING [Parking] > 1st & Main Parking Ga...

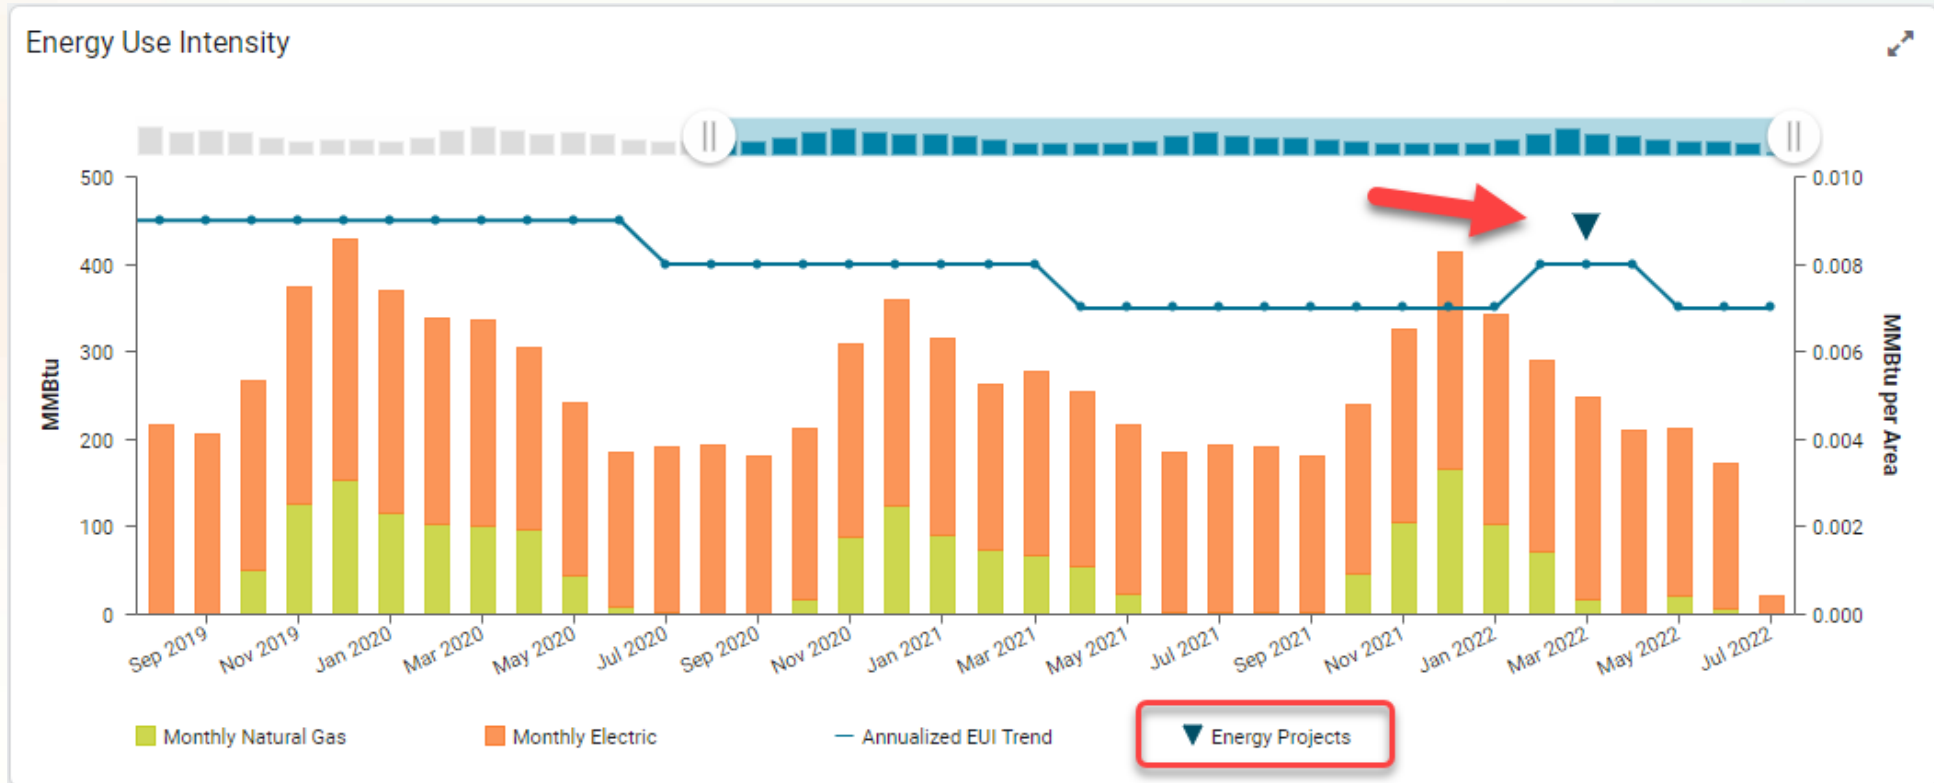

Name	Cost	Start
LED Lighting Retrofit	\$ 20,000	12/1/2021
Short name (used on charts)	Rebate	Completion
LED Lights	\$ 5,000	3/1/2022
Type	Cost savings	Funding source
LED Lighting	\$ 36,000	Green Grant
Manager	Energy savings	Memo
Parker Moore	360000 kWh	Brighter savings

# Energy Projects

Completed Energy Projects shown by symbol on the EUI Chart for the Building

Not intended to be a comprehensive project management tool, but rather serves to indicate the impact of completed Energy Projects on the EUI Charts

# **Savings**

**(AKA Cost Avoidance)**

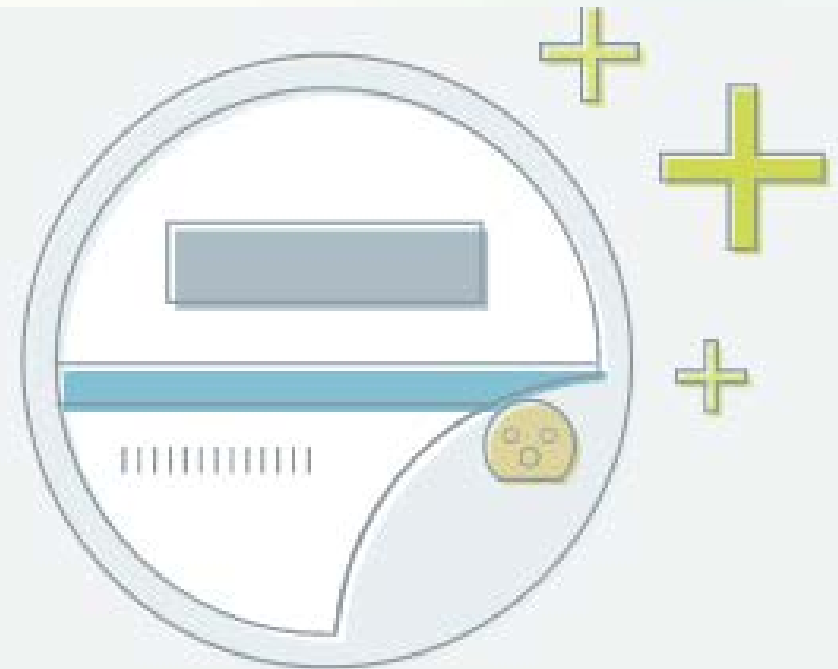

# Savings

Savings are found in the Buildings & Meters hierarchy

Compliant with IPMVP Option C (“Whole building”) approach

Cost Avoidance is the Measurement and Verification (M&V) of energy and cost savings due to energy management projects and is the dollars that you **avoided** spending.

Current bills are compared with an adjusted baseline year. The adjusted process takes into account major variables including weather (degree days), billing period length, floor area changes and commodity price, and allows special adjustments for other changes such as occupancy, schedule and equipment retrofits.

# Baseline

## Settings

## Use vs. Weather Regression Analysis

### Cooling Adjustment

Off  On

Base load ?	2,199.01 kWh/day
Weather factor ?	-0.37 kWh/CDD 0.00 (t-stat)
R2 ?	0.00
Minimum R2 ?	
Adjusted R2 ?	
CVRMSE ?	
NDB ?	
Standard Error ?	

### Heating Adjustment

Off  On

Base load ?	2,170.36 kWh/day
Weather factor ?	45.61 kWh/HDD 6.30 (t-stat)
R2 ?	0.83
Minimum R2 ?	0.30
Adjusted R2 ?	0.83
CVRMSE ?	0.05
NDB ?	0.00
Standard Error ?	137.85

● data point   ■ outlier   ○ user-removed   — best fit   — 2 standard deviations   — base load

# Special Adjustments

A special adjustment is needed if there has been a change in the energy use of a building meeting these conditions:

- It occurred AFTER the baseline year
- It is NOT the result of an Energy Manager's actions
- It is NOT weather related

Such uncontrollable conditions, if left unadjusted, can unfairly make the energy management results appear better or worse than reasonable.

Special Event

Method  
Add X.XXXX per day to the BATCC non-weather use

Adjustment value  
900

Start  
3/16/2022

End  
3/18/2022

Frequency  
 continuous  recurring

Description  
Hosting St. Patrick's Day Event

# Other Savings

Other Savings are one-time or recurring cost reductions that don't fit within the normal cost avoidance calculations of today's bills vs. baseline bills. However, they are valid savings attributable to energy management activities.

Examples:

- A rebate or refund negotiated with a vendor
- A lower cost rate schedule/tariff
- Savings in personnel, equipment, supplies, or maintenance due to reduced runtimes of lighting, HVAC and other equipment
- Savings due to consolidation of accounts, meters, or operations
- Eliminated capital expenditures due to lower loads and runtimes

## Reports Library

### Cost Avoidance

Report-14

Data table that summarizes BATCC Cost, Actual Cost, Cost Avoidance, and Cost Avoidance percentage. The report can be sorted on any column.

### Energy Conservation Program

Report-23

Pie and line charts for Cost Avoidance summarizes the effectiveness of your Energy Conservation Program.

### Cost Avoidance Summary

Report-24

Data table with summary data for each month. The Total \$ column includes Other Savings if any are entered. Also includes a separate page for an Energy Summary by Commodity.

### Meter Special Adjustments List
