Notes:
1. 2021 Annual Engineering Report: All values shown in the table below are only as accurate as the information presented by each facility. While the Division has attempted to verify and confirm all numbers, errors and gaps may exist in the information.
2. Waste Acceptance: Annual waste acceptance rate is yearly total tonnage as reported on the AER and may deviate from other annual tonnages reported elsewhere. Weekly waste acceptance is calculated by TDEC from the yearly tonnage assuming a 52 week year. Daily waste acceptance is calculated by TDEC from the yearly tonnage assuming 310 operating days. Actual weekly and daily rates may vary.
3. Remaining Life & Waste Density: Remaining life is estimated using current annual waste acceptance rate, reported waste density, and remaining permitted capacity. Waste density listed as reported in the AER and not verified by DSWM.
4. Permitted Active Facility: A facility which has been permitted, constructed, and actively receiving wastes.
5. Permitted Inactive Facility: A facility which has been permitted, constructed, and not actively receiving wastes. To be considered inactive, a facility must submit at least one AER Report showing no wastes have been received for a full calendar year.
6. Permitted Unconstructed Facility: A facility which has been permitted, but no cells have been constructed or approved to accept waste and no waste have been received by the site.
