

QUICK DOs and DON'Ts

- **Do** test your home at least once a year—either in the hottest part of the summer or coldest part of the winter
- **Do** hang your kit on the lowest livable floor of your home
- **Do** hang your kit in a place where you spend a lot of time—like a living room or bedroom
- **Do** hang your kit 2 to 6 feet from the floor
- **Don't** move or change the location of the kit while testing
- **Don't** put your kit in a room with high humidity—like a bathroom
- **Don't** put your kit directly in front of a vent, door, window, or underneath a ceiling fan that is operating
- **Don't** test a crawl space

READ THIS FIRST!

- Carefully open the plastic wrapper around your test kit
- Inside, you will find your test kit and a folded piece of paper that contains your instructions
- Locate your 7 digit test kit number. **YOU NEED TO COMPLETE THIS STEP IN ORDER TO GET YOUR RESULTS BACK!!**
- Fill out the blanks located on your test kit according to the directions on the folded piece of paper

In this example we started the test at 2:00pm on the 3rd day of the month, and ended at 5:00pm on the 6th day of the month.

The temperature in the house was 74 degrees, and the test was done on the 2nd floor.
