**Converting lbs/gal to mg/mL**

To use this diagram: First, find the box that coincides with the beginning unit (i.e. mg/mL). Then find the box that coincides with the desired ending units (i.e. lbs/gal). The numbers between the starting point and ending point are the conversion factors. When moving from a smaller box to a larger box, multiply by the factor between them. When moving from a larger box to a smaller box, divide by the factor between them. For the final number, divide the top number by the bottom number.
