If you have been diagnosed with COVID-19, follow the steps below:

**Isolate Yourself**
- You must isolate for a minimum of 5 days after you become ill and may resume normal activities after you are without fever for 24 hours (without fever-reducing medication) and show improvement in symptoms.
- If you are without symptoms, you should isolate through 5 days after your specimen collection date.
- Regardless of symptoms, you should wear a mask when around others through 10 days after becoming ill (or after testing positive, if you are without symptoms).
- Other members of your household should also stay home, and no visitors should be allowed.
- Stay in a specific room and away from other people in your home to the extent possible. Use a separate bathroom, if available. Household contacts can consider relocating to a separate, uninhabited housing location if available to decrease their risk of exposure.
- Where possible, ask others such as friends or family, to get food or necessities for you.
- If you need to leave home, such as to seek medical care, wear a face covering if you have one.

**Inform Your Close Contacts**
- Close contacts include anyone that you were within 6 feet of for >15 minutes while feeling ill. Close contact is defined as being within 6 feet for at least 15 minutes. However, this depends on the exposure level and setting. The final decision on what constitutes close contact is made at the discretion of public health.

**Monitor Your Health**
- Get plenty of rest, stay hydrated and, if needed, take medication to reduce your fever.

**Communicate with Public Health**
- After your diagnosis, you may receive a call or text from public health for additional investigation. It may take a few days for public health officials to contact you, and they will ask about your activities before and after you became ill.

**Arrange for Care**
- If your symptoms get worse and you need to seek healthcare, call ahead and tell the provider that you have been diagnosed with COVID-19. This will help the healthcare provider’s office take steps to keep other people from getting infected or exposed. Ask your provider if monoclonal antibodies or antivirals are right for you.

**Practice Healthy Habits**
- Wear a mask in public settings.
- Cover your cough or sneeze into your elbow or a tissue.
- Wash your hands often with soap and water for ≥ 20 seconds, or use alcohol-based hand rub.
- Clean and disinfect objects and surfaces regularly, including your phone.

**Returning to Regular Activities**
- Once you've completed your isolation period at home (minimum of 5 days after onset, without a fever for 24 hours and showing improvement in symptoms), you can return to your regular activities.
- CDC does not recommend retesting within 3 months after the first day you became ill from the initial COVID-19 infection: [https://www.cdc.gov/coronavirus/2019-ncov/hcp/duration-isolation.html](https://www.cdc.gov/coronavirus/2019-ncov/hcp/duration-isolation.html)
