Food has NOT been identified as a likely source of COVID-19, however it can be spread between employees and customers.

Do not work if you have COVID-19 symptoms:
- Fever
- Cough
- Shortness of breath

If you have been advised by the Health Department or your doctor to self-isolate or quarantine, you must not return to work until that period is over.

Wash hands frequently with soap and warm water for **20 seconds**. Dry hands with a disposable paper towel.
- Always wash your hands after touching your eyes, nose or mouth
- Make sure handwashing stations are always stocked with soap and paper towels
- Public restrooms and kitchen lavatories may need to be stocked more frequently

Do not touch ready-to-eat foods with bare hands.

Disinfect nonfood-contact surfaces and touchpoints such as menus, door knobs, tabletops, and condiment containers often:
- Use chemicals approved by the EPA as effective against COVID-19 and follow label directions for disinfection: [https://www.epa.gov/coronavirus](https://www.epa.gov/coronavirus)
- Use a separate wiping cloth and disinfection solution between public and food production areas
- If using a chlorine bleach solution for disinfection, a concentration of 1000 to 5000 ppm (5 to 25 tablespoons of household bleach per gallon of water) is effective
- Follow the manufacturer’s instructions and consult with your chemical provider before using any chemicals

To help customers reduce illness wash, rinse, and sanitize tongs and other utensils in self-service areas often throughout the day.

Consider providing alcohol-based hand antiseptic rubs (with at least 60% ethyl alcohol) at the entrance to the facility.
