

Vaccines Matter to Monroe County

What is a VPD Outbreak?

A Vaccine-Preventable Disease, or VPD, outbreak (e.g., measles) may occur when community members are inadequately vaccinated against a disease. The TN Kindergarten Immunization Compliance Assessment is a great way to understand your county's risk of an outbreak!

Monroe County Kindergarten Immunization Compliance Assessment (2018-19)

| Student Status | % (#) of Schools |
|------------------------|------------------|
| At least 95% immunized | 33% (2) |
| 90% - 94.9% immunized | 67% (4) |
| Below 90% immunized | 0% (0) |

Immunization Rate and Risk of VPD Outbreak

-  At least 95% immunized: meets immunization goal
-  90% - 94.9% immunized: needs improvement
-  Below 90% immunized: vulnerable to preventable outbreaks

Overall, **94.3%** of 2018-2019 Monroe County kindergarten students were fully immunized at enrollment. To remain at low risk for a VPD outbreak, this rate should remain above 95%.

Impact of One Case of Measles in TN April 2019

Outbreaks like this can be avoided when the community is properly vaccinated.

Facts Matter:

1 The United States has the safest vaccine supply in its history. Vaccines do not cause autism.
