

***Acinetobacter* species, Carbapenem-resistant**

Case Definition

Acinetobacter baumannii complex that are carbapenem-nonsusceptible (intermediate or resistant to at least one carbapenem, i.e., doripenem, imipenem, meropenem, or ertapenem) or PCR detection of carbapenemase producing strain. Isolates from normally sterile sites or urine from residents of the surveillance area only—not statewide.

Cases are reported to EIP HAI/AR staff; they will complete investigations.
