In Week 3, 4.58% of patients seen in sentinel provider clinics had ILI, compared to 5.3% in Week 2. Reported ILI in the Jackson sentinel site is consistently higher than others due to the classification process used there; the levels of laboratory-confirmed influenza suggest that actual influenza cases are rising but are lower than the ILI rate there suggests. To date, 388 specimens from Week 3 have been tested by TDH Laboratory Services and reporting commercial laboratories; 48 (12.4%) specimens tested positive for influenza viruses. A map of counties with recent influenza-positive results is included.

SPN sites should submit specimens year-round from ALL patients meeting the ILI case definition: Fever > 100°F (37.8°C) plus cough and/or sore throat, in the absence of a known cause (other than influenza). Case definition is not dependent on any test. If you have questions, contact your regional or state SPN representative. The TDH specimen submission form dated September 2015 should be used.

Specimens are critical to be able to track the geographic spread and intensity of seasonal influenza viruses, to detect the emergence of novel virus and/or antiviral resistance and provide data for vaccine strain selections.

### Influenza activity in Tennessee
- The percentage of outpatients with ILI visiting the state's Sentinel clinic sites was above the CDC's baseline rate of 2.1%.
- 12.4% of specimens tested positive for influenza viruses.
- 36 of 95 Tennessee counties have had at least one confirmed influenza-positive result in recent weeks.

### Spread and Intensity of Influenza

Influenza Confirmed by Culture or PCR in Tennessee from Specimens Collected by Any Source within the Past 6 Weeks

December 11, 2016 through January 21, 2017

- Strains are reported by county of case residence.
- Counties where influenza sentinel providers are located are identified with bold boundary lines.
- Stars mark counties with large metropolitan populations (Memphis, Jackson, Nashville, Chattanooga, Knoxville, and the Tri-Cities area).

Note: TDH weekly laboratory surveillance for influenza includes PCR and culture results for Tennessee specimens submitted to two commercial laboratories serving outpatient clinics and hospitals statewide. These numbers are added to those from TDH Laboratory Services and help provide a picture of influenza activity areas of the state in which there are not Sentinel surveillance sites.
Reference Information for Sentinel Provider Network

1. Influenza-like illness (ILI) is defined as fever > 100°F (37.8°C) plus cough and/or sore throat, in the absence of a known cause (other than influenza). Classification of ILI is based upon symptoms only and does not require any test.

2. The % of patients with ILI seen in each region is compared to the statewide average. Regions with % statistically-significantly different from the state average are noted as “higher” or “lower.” The CDC reports that the percentage of patients visiting outpatient healthcare providers in the Sentinel Provider Network (SPN) with influenza-like-illness (ILI) when influenza viruses are not circulating is expected to fall at or below a specific SPN baseline [nationwide = 2.2%, East South Central region (AL, TN, MS, KY) = 2.3%]. When the percentage of patients with ILI exceeds this baseline, this suggests that influenza viruses may be circulating.

**Important information for Sentinel Providers**

Sentinel Providers report ILI by the end of Wednesday following the end of the reporting week ([https://wwwn.cdc.gov/ilinet/](https://wwwn.cdc.gov/ilinet/)) and collect and ship specimens from ILI cases Monday through Thursday (maximum 10/week per provider). All Sentinel Provider specimens MUST be accompanied by the Influenza and Respiratory Viral Panel Submission form or testing will not be done. The Respiratory Viral Panel is only validated for nasopharyngeal (NP) specimens. Specimens collected from other sites cannot be tested.

Additional laboratory supplies can be obtained by completing the lab order supply form. To ensure the order is filled, please include the CDC Provider ID Code.

**Contact Information**

Submit weekly reports to:  [https://wwwn.cdc.gov/ilinet/](https://wwwn.cdc.gov/ilinet/) OR Fax 888-232-1322

**State Lab:**
- Dr. Amy Woron (Molecular Biology, PCR) 615-262-6462
- Bryan Mason (Virology, Respiratory Viral Panel) 615-262-6300

**SPN Questions:**
- **State:** Robb Garman 800-404-3006 OR 615-741-7247
- **County/Region:** Regional SPN Coordinator (see map)
