Attention Sentinel Providers:
CDC remains interested in viruses collected from vaccine recipients. When you submit a specimen from an ILI patient, please document vaccine status (date of receipt, if possible) on the form!

The percentage (%) of patients with ILI reported in Week 08 was 4.65% as compared to 4.78% in Week 07. Of the 110 specimens received from Week 8, 34 (30.9%) tested positive for influenza (all 3 circulating strains detected). CDC has detected no resistance in any circulating strains to neuraminidase inhibitors (oseltamivir, zanamivir) recommended to treat or prevent illness in persons at high risk of complications. A map of counties with confirmed PCR or culture-confirmed influenza in the past six weeks is below.

State Public Health Laboratory
Respiratory Viral Panel
Number of Positive Specimens, by week

*Note: The RVP testing instrument is still being serviced. Only influenza PCR results are currently available.
Influenza confirmed by culture or PCR in Tennessee from specimens collected by any source within the past 6 weeks.

January 16, 2011 to February 26, 2011

- Strains are reported by county of case residence or, if unknown, county where the specimen was collected.
- Counties where influenza sentinel providers are located are identified with bold boundary lines.
- Stars marks counties with large metropolitan populations (Memphis, Jackson, Nashville, Chattanooga, Knoxville, and the Tri-Cities area)
Reference Information for Sentinel Provider Network

1 Influenza-like illness (ILI) is defined as fever > 100°F (37.8°C) plus cough and/or sore throat, in the absence of a known cause (other than influenza). Classification of ILI is based upon symptoms only and does not require any test.

2 The % of patients with ILI seen in each region is compared to the statewide average. Regions with % statistically-significantly different from the state average are noted as “higher” or “lower.” The CDC reports that the percentage of patients visiting outpatient healthcare providers in the Sentinel Provider Network (SPN) with influenza-like-illness (ILI) when influenza viruses are not circulating is expected to fall at or below a specific SPN baseline [nationwide = 2.2%, East South Central region (AL, TN, MS, KY) = 2.3%]. When the percentage of patients with ILI exceeds this baseline, this suggests that influenza viruses may be circulating.

Important information for Sentinel Providers

Sentinel Providers report ILI by the end of Tuesday following the end of the reporting week (www2a.cdc.gov/ilinet) and collect and ship specimens from ILI cases Monday through Thursday (maximum 10/week per provider). All Sentinel Provider specimens MUST be accompanied by the Influenza and Respiratory Viral Panel Submission form dated 8/18/2010, or testing will not be done. The Respiratory Viral Panel is only validated for nasopharyngeal (NP) specimens. Specimens collected from other sites cannot be tested.

Additional laboratory supplies can be obtained by completing the lab order supply form. To ensure the order is filled, please include the CDC Provider ID Code.
