Tennessee Childhood Lead Poisoning Prevention Program

Which Children Should be Tested?

- Children living in homes built before 1978 or whose parents have occupational exposure to lead
- TennCare children at ages 12 and 24 months
- Children living in high risk zip codes
- Children whose parents answer "yes" or "don't know" to any questions on the risk assessment questionnaire used at well-child checks between six and 72 months of age

Health Effects of Lead Exposure

- Damage to the brain and nervous system
- Slowed growth and development
- Learning and behavioral problems
- Hearing and speech problems

7.1% of Tennessee children under age six live in a high-risk zip code

17% of Tennessee children with confirmed elevated lead levels from 2013–2018 resided in high risk zip codes

Top 20 Zip Codes for Confirmed EBLL Cases from 2013–2018
