

## MMRC Quarterly Notifications 2022 Review

The state should designate and support inpatient physical rehabilitation facilities that incorporate addiction treatment into their mandatory provision of behavioral health services.

The state should designate and support inpatient residential addiction rehabilitation programs that can manage patients with stable chronic medical conditions.

EMS should be required to undergo yearly education and training on preeclampsia and other pregnancy complications and how to manage outside of the hospital/in the field.

Providers should closely monitor and anticipate transfusion needs in patients with significant hemorrhage.

EMS should be required to carry life saving measures with them in the field that can be used during pregnancy.
