## Tennessee Valley Authority's Payments in Lieu of Taxes

The Tennessee Advisory Commission on Intergovernmental Relations was directed by the Electric Generation and Transmission Cooperative Act of 2009 (Section 4 of Public Chapter 475, Acts of 2009) to monitor changes in the wholesale distribution of electric power by the Tennessee Valley Authority (TVA) and its distributors for possible effects on the Authority's payments in lieu of taxes (PILOTs) to the states in the Valley region. The Commission's report was to "include recommendations, if any, on adjustments to the state tax system that would keep the state and local governments whole from such future changes." The Act authorized the creation of nonprofit membership cooperatives to generate and transmit electricity in Tennessee. At the time, one such co-op already owned a power-generating facility in Mississippi, and the legislature was concerned that, having authorized them, they had opened the door to a potential decline in TVA's payments to the states if the co-ops began selling electricity directly to distributors.

After considering a number of options, including those developed by the Commission,<sup>1</sup> the Tennessee General Assembly passed Public Chapter 1035, Acts of 2010, requiring payments equivalent to TVA's Tennessee PILOT from any other entity providing wholesale electric current for resale within the state, such as the electric generation and transmission cooperatives authorized in 2009. Public Chapter 1035 was designed to ensure that revenue from power sales in the TVA region would not depend on who produced that power or who sold it. The act also renewed the requirement that the Commission monitor the effects of the 2009 act and report to the General Assembly annually. This is the Commission's report for the 2017 legislative session.

Although the 2010 law put to rest immediate concerns about the potential loss of TVA revenue created by the 2009 law, concerns about the problems created by the threat of privatization and by TVA's debt ceiling, which has not been raised since 1979,<sup>2</sup> continue to reappear from time to time. Both were among the reasons given by power distributors in the region for seeking authorization to form the generation and transmission co-operatives authorized by the 2009 Act. While the threat of privatization has diminished in recent years,<sup>3</sup> it is not known yet what, if any, new privatization policies the new federal administration might pursue. TVA's debt ceiling remains \$30 billion, which because of inflation now has the buying power of about \$11 billion.

<sup>2</sup> 16 United States Code Section 831 n-4(a).

<sup>3</sup> Tennessee Valley Authority 2015h

TVA's payments in lieu of taxes to the eight states will decrease an estimated \$18 million for federal fiscal year 2016-17 because of improved efficiencies within TVA and among its customers, relatively mild weather, and flat power demand.

In 2003, the US General Accounting Office (GAO) conducted a study of TVA's debt management strategies and concluded that TVA was in compliance with all applicable standards. But the GAO did say that Congress should consider amending the TVA Act to clarify whether the use of nontraditional financing arrangements such as lease-lease-back arrangements should be counted against the debt cap. Figure 1 shows the level of TVA's debt since 2008.<sup>4</sup>

**Figure 1. Tennessee Valley Authority Statutory Debt at Year End (in billions)**

Source: Tennessee Valley Authority 2014a; Tennessee Valley Authority 2015a; Tennessee Valley Authority 2016a; and email from Stephen Schoolfield, Program Manager-Taxes, Tennessee Valley Authority, October 20, 2016.

To manage within its \$30 billion debt limit, TVA has adopted a number of innovative, but by its own account costly financing techniques, some of which can alter the amount of PILOT revenue paid directly to states. The lease-and-lease-back technique used so far to finance the expansion of power production in Tennessee does not affect the amount of the PILOT paid directly to Tennessee, but the sale-and-lease-back technique used at one of its plants in Mississippi reduced the amount paid directly to that state, and the potential for the same exists throughout the region. The difference is in who owns the property and whether it is subject to state and local taxes.

The management strategy laid out in TVA's 2015 Integrated Resource Plan (IRP) could also affect the balance of PILOTs across the region.<sup>5</sup> Changes in the supply system called for by the plan, brought about in part in response to economic factors and environmental mandates, include closing a number of old coal-fired generating plants, building or acquiring plants powered by natural gas, expanding nuclear-powered facilities, and relying more on renewable energy and energy efficiency. Demand management strategies

<sup>4</sup> United States General Accounting Office 2003.

<sup>5</sup> Tennessee Valley Authority 2015e.

in the plan, if successful, could reduce TVA revenues and ultimately the PILOT for all recipients.

Other changes may reduce TVA's PILOT to Tennessee as well. For example, six coal-fired units at the Johnsonville plant in Humphreys County were retired on December 31, 2015, and there are plans to retire the other four before December 2017.<sup>6</sup> This could reduce the value of power-producing property in Tennessee, one of two factors determining its share of the PILOT, unless the reduction is offset by an increase in the value of TVA property elsewhere in Tennessee or by net reductions in other states. Moreover, the demand management strategies in the Authority's plan, if successful, could reduce TVA revenues and ultimately the PILOT for all recipients, as could other factors, such as the economy and the weather. None of these changes appear to warrant legislative action at this time but should continue to be monitored.

### **TVA's Payments in Lieu of Taxes Decline**

According to a press release issued in November 2016, TVA's actual payments in lieu of taxes for federal fiscal year 2015-16 amounted to \$535 million, of which \$351.8 million was paid to Tennessee governments, including \$3.4 million<sup>7</sup> in direct payments to counties. This was a decrease of \$7 million over payments to all states in the previous fiscal year. Payments for the current fiscal year, federal fiscal year 2016-17, are estimated to decrease by \$18 million because of improved efficiencies within TVA and among its customers, relatively mild weather, and flat power demand.<sup>8</sup>

Tennessee governments will receive an estimated \$342.8 million, of which \$3.4 million will again be paid directly to counties. Table 1 approximates these payments; however, values in table 1 are reduced by 2% for consistency with past TVA estimates which allowed 2% for end of the year adjustments. Tennessee's percentage of the Authority's overall payments increased slightly, in part because TVA retired the last two coal-fired units at its Widows Creek facility, and five coal-fired units at Colbert, all located in Alabama, reducing that state's percentage of the PILOT relative to other states. Improvements to Watts Barr Unit 2, the Gallatin steam plant, Boone Dam, and the Allen combined-cycle plant increased the value of power-producing property in Tennessee, which offset decreases in value from the retirement of coal-fired units at Johnsonville.<sup>9</sup> Total payments are based

Tennessee governments will receive an estimated \$342.8 million in TVA PILOTs in federal fiscal year 2016-17.

<sup>6</sup> Tennessee Valley Authority 2016c.

<sup>7</sup> Tennessee Valley Authority 2016h.

<sup>8</sup> Ibid.

<sup>9</sup> Email from Stephen Schoolfield, Program Manager-Taxes, Tennessee Valley Authority, December 8, 2016.

on five percent of prior-year gross proceeds<sup>10</sup> from power sales, and funds are divided among the eight states in which TVA owns power-producing properties based both on revenues from power sold by TVA and on the value of TVA power property located in each state. Although TVA buys power from other sources, those purchases have no effect on the amount each state receives from its PILOTs.

Tennessee receives more than 66% of the total distributed through this formula, a percentage that has been increasing steadily since 2008-09. Those increases helped offset what would have otherwise been larger decreases in TVA's payments to Tennessee in federal fiscal years 2016 and 2017. See table 1.

Table 1. Tennessee Valley Authority Revenue Sharing  
 Distribution Estimates\* by Federal Fiscal Year (in millions)

	2016-17	2015-16	2014-15	2013-14	2012-13	2011-12
TVA Payment to States	\$506.8	\$524.2	\$531.2	\$522.4	\$536.5	\$567.4
Tennessee's Percent	X 66.56%	65.77%	65.30%	62.84%	61.69%	61.21%
Tennessee's Amount	\$337.3	\$344.8	\$346.9	\$328.3	\$330.9	\$347.3
Direct Payment to Counties	— 3.4	3.4	3.4	3.4	3.4	3.4
Tennessee's Share	\$333.9	\$341.4	\$343.5	\$324.9	\$327.6	\$343.9

\*TVA estimates payments in lieu of taxes each year based on unaudited prior-year gross receipts, distributes these estimated payments monthly from October through August, then makes a final payment for the year in September based on audited revenue figures for the previous fiscal year. It is not unusual for the final payment to be adjusted upward from the original estimated amount. Tennessee's share minus payments to counties may not sum to the net to state because of rounding.

Source: Tennessee Valley Authority

Tennessee's local governments receive around 45% of the amount allocated to Tennessee, and they are directly affected by the decreasing total payments to Tennessee in federal fiscal year 2016-17. On a state fiscal year basis, the 2016-17 allocations will decrease by \$1.9 million for counties, by \$1.3 million for cities, and by \$3 million for the state's own agencies. These amounts declined for the state fiscal year as well as for the federal fiscal year. See appendix A for an explanation of Tennessee's allocation formula and appendixes B and C for the distribution to local governments within the state by county and city since state fiscal year 2009-10.

### TVA's Efforts to Meet Power Needs and Remain Within its Debt Limit

To meet the region's power demand, TVA must plan for both short-term and long-term fluctuations in the use of electricity while staying within its statutory debt limit of \$30 billion. The Authority has developed a number of strategies for managing its system to meet demand within these constraints. These strategies have and will continue to affect TVA's payments to Tennessee.

<sup>10</sup> TVA interprets "gross proceeds" as the proceeds from the sale of power to municipalities, cooperatives, and industries. The TVA Act specifically excludes sales to federal agencies from the PILOT calculation.

## Short-Term System-Management Strategies

TVA meets short-term-demand increases that result from extreme weather by operating additional facilities that are used only in times of high demand, purchasing power from other utilities, and cutting off power to customers with interruptible contracts. These strategies enabled TVA to meet record power demands on January 8, 2015, when demand hit the third highest winter peak in TVA's history at 32,723 megawatts<sup>11</sup> and again on February 19, 2015, when demand set a record for that month at 32,109 megawatts.<sup>12</sup> According to the Authority, "Meeting the demand required the combined effort of TVA's employees and generating facilities, coordination with the Valley's 155 local power companies and large industrial customers, and the cooperation of businesses and households to conserve."<sup>13</sup> TVA used natural gas plants to supplement the power provided by its coal-fired, nuclear, and hydroelectric facilities and purchased additional power from the open market to manage a similar period of peak demand in 2014.<sup>14</sup> But managing peak demand can require temporarily cutting off power to customers who agreed to allow TVA and its distributors to interrupt service to them during emergencies<sup>15</sup> in exchange for credits on their power bills<sup>16</sup> as happened at Murray State University in 2014.<sup>17</sup> Although extreme weather could affect the amount and distribution of TVA's payments to the states, these events were too short-lived to have a noticeable effect.

## Long-Term System Management Strategies

TVA's long-term management strategies are laid out in its updated Integrated Resource Plan, which was approved by the TVA Board in August 2015. The update, a response to changes in the utility industry including lower-cost natural gas and renewables as well as decreased demand caused by economic changes and energy efficiency efforts,<sup>18</sup> analyzed five strategies for meeting demand.

- Traditional utility approaches for optimizing cost
- Planning to meet demand while also meeting an emissions target
- Purchasing additional power from other utilities to meet most demand increases
- Maximizing energy efficiency
- Maximizing renewables<sup>19</sup>

<sup>19</sup> Tennessee Valley Authority 2015e.

TVA must plan for both short-term and long-term fluctuations in the use of electricity while staying within its statutory debt limit of \$30 billion.

The sale-and-lease-back technique used at one of TVA's plants in Mississippi reduced the amount paid to that state, and the potential exists throughout the region.

These strategies could affect the amount and distribution of the Authority's payments to the states in the future. TVA has been continually updating its generating system to meet the needs of the region's growing economy and tighter air-quality standards. As early as the 1960s and 1970s, TVA was investing heavily in nuclear power for both of these reasons. More recently, the Authority has invested in natural gas-powered facilities to meet periodic surges in demand caused by the weather. TVA's implementation of its long-term management strategies, which will affect the distribution of the Authority's PILOTs, will be affected by the economics of power production and the requirements of the Clean Air Act (CAA) and other environmental regulations as well as the Authority's debt limit.

### **TVA's Debt Limit and Financing Arrangements**

Earlier concerns about TVA's financing arrangements for new generating capacity in the region and their potential effects on PILOTs in the region and across the state have diminished as the Authority has modified its strategies. In order to stay within the \$30 billion debt ceiling imposed on it by the Congress in 1979,<sup>20</sup> TVA began using new financing methods that affected the distribution of PILOT funds for some states, including the amount they had available to allocate to their counties and cities. One technique is the leasing of some generating facilities, an approach TVA has no current plans to expand.<sup>21</sup>

Shortly before the Electric Generation and Transmission Cooperative Act was passed in 2009, TVA entered into an agreement with a group of its distributors organized as the Seven States Power Corporation, a non-profit company.<sup>22</sup> Seven States purchased an interest in TVA's Southaven, Mississippi, power plant with the agreement that TVA would continue to operate it.<sup>23</sup> TVA later bought back all of Seven States' interest in the plant.<sup>24</sup> The source of power generation does not affect the PILOT; therefore, the sale-and-lease-back arrangement at Southaven did not affect PILOT because all sales were accounted for as TVA revenues and subject to the PILOT allocation to states.

Leasing arrangements such as the one used in Southaven during this agreement do not change the total amount of the PILOT under the TVA formula, nor do they change the allocation across states. Section 15d(g) of the Tennessee Valley Authority Act of 1933 says that

<sup>20</sup> 16 United States Code Section 831 n-4(a).

<sup>21</sup> For details on these arrangements see Tennessee Valley Authority 2014b.

<sup>22</sup> Tennessee Valley Authority 2009.

<sup>23</sup> More information about the plant can be found on TVA's website at <https://www.tva.gov/Energy/Our-Power-System/Natural-Gas/Southaven-Combined-Cycle-Plant>.

<sup>24</sup> Tennessee Valley Authority 2013a.

*...power generating and related facilities operated by the Corporation under lease and lease-purchase agreements shall constitute power property held by the Corporation within the meaning of section 13 of this Act...*

This provision causes facilities qualifying for Section 15d(g) treatment to be included in the calculation of the value of power-producing property under Section 13, which means that the value of TVA property in the lease-holding state would be included in the PILOT calculation.

The amount of the TVA PILOT that goes through any particular state's allocation formula is decreased to the extent that TVA reimburses the new plant owners for taxes they must pay to the state or local governments. Section 15d(g) of the 1933 act goes on to say

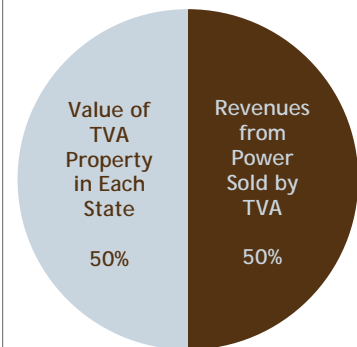

*...that portion of the payment due for any fiscal year under said section 13 to a state where such facilities are located which is determined or estimated by the Board to result from holding such facilities or selling electric energy generated thereby shall be reduced by the amount of any taxes or tax equivalents applicable to such fiscal year paid by the owners or others on account of said facilities to said state and to local taxing jurisdictions therein.*

The initial sale-and-lease-back arrangement at the Southaven plant and the Authority's current lease arrangement at the privately owned Caledonia plant, also in Mississippi, illustrate the effect of this second provision. Privately owned plants are, of course, subject to state and local taxes. Consequently, the portion of the TVA PILOT paid directly to Mississippi, related to Caledonia, was reduced by approximately \$800 thousand in 2015-16 and will be reduced by an estimated \$1 million in 2016-17.<sup>25</sup> This works much like the \$3+ million in direct payments TVA makes to counties in Tennessee. Direct payments are taken off the top of TVA's PILOT to each state, reducing the amount allocated through the state's statutory formula.

The amount allocated through Tennessee's formula, including the amount retained by the state in its general fund, would be reduced by any taxes paid on account of any plant operated through a sale-and-lease-back arrangement if that were to occur. Tennessee might want to mitigate that reduction by modifying its allocation formula to offset the direct payments of taxes by, for example, reducing the allocation to any particular jurisdiction by the amount of the reimbursement TVA made to the plant owners. It is possible, of course, that the reimbursement amount to those jurisdictions could be greater than the allocation through the state

<sup>25</sup> Email from Stephen Schoolfield, Program Manager-Taxes, Tennessee Valley Authority, November 29, 2016.

**5% of TVA's Gross Proceeds is Distributed to States Based on**

TVA has no current plans for any sale-lease-back arrangements in Tennessee that would affect the state's share of the Authority's PILOT.

formula, so considerable thought would need to go into making such a change.

The following statement included in TVA's 2013 Form 10-K filed with the United States Securities and Exchange Commission suggests that the sale-and-lease-back strategy has not been taken off the table:

TVA may seek to enter into similar arrangements for other assets in the future, potentially including assets under construction. While such leasing transactions allow TVA to diversify its asset financing program, financing an asset by using the proceeds of leasing transactions is typically more costly to TVA than financing an asset with the proceeds of Bonds.<sup>26</sup>

TVA chose a somewhat different strategy to raise funds for generating expansions in Tennessee without approaching its debt ceiling. Thus far, arrangements in Tennessee have been lease-and-lease-back agreements, which do not jeopardize the amount of the PILOT controlled by Tennessee's allocation formula. An example is the natural gas combined cycle plant built between 2010 and 2012 in Hawkins County next to the John Sevier fossil plant and leased to a private company in January 2012. The company paid TVA \$1 billion for the lease and then leased the plant back to TVA for 30 years.<sup>27</sup> This lease arrangement changes neither the ownership of the property nor TVA revenues and thus has no effect on the PILOT across states or within Tennessee. Similarly, in August 2013, TVA repurchased the 90% share of the Southaven plant that Seven States had purchased. TVA then entered into a leasing arrangement with Southaven Combined Cycle Generation LLC in which the facility is leased to the company and, in turn, the facility is leased back to TVA.<sup>28</sup>

Currently, TVA has no plans for any sale-lease-back arrangements in Tennessee that would affect the state's share of the Authority's PILOT in the short-term.<sup>29</sup> However, the possibility exists that TVA could utilize this strategy in the future to finance new construction if its debt limit remains capped at \$30 billion. TVA's 2014 Form 10-K acknowledges its use of these innovative financing techniques but mentions no plans for additional arrangements at the present time. TVA may seek to enter into similar arrangements in the future, but has no immediate plans to do so.<sup>30</sup>

<sup>26</sup> Tennessee Valley Authority 2013a.

<sup>27</sup> More information about the plant can be found on TVA's website at <https://www.tva.com/Energy/Our-Power-System/Natural-Gas/John-Sevier-Combined-Cycle-Plant> and in Tennessee Valley Authority 2013a.

<sup>28</sup> Tennessee Valley Authority 2013c.

<sup>29</sup> Telephone interview with Stephen Schoolfield, Program Manager-Taxes, Tennessee Valley Authority, November 29, 2016.

<sup>30</sup> Tennessee Valley Authority 2014b.

In April 2015, TVA purchased Quantum Utility Generation's Choctaw combined-cycle natural gas plant near Ackerman, Mississippi. Although the purchase used traditional forms of financing, the acquisition allows for future ownership by Seven States Power Corporation, which could affect the PILOT depending on the type of sale or lease arrangement adopted.<sup>31</sup>

## Rebalancing Power Sources and Increasing Efficiency Could Affect PILOTs

As TVA continues to rebalance its generation fleet consistent with the recommendations in its 2015 IRP, these changes could cause shifts in the value of power-producing property from state to state and from county to county and change each state and county's share of TVA's PILOTs. Some of the changes so far, including the changes at the John Sevier plant in Hawkins County, which were part of a set of agreements to settle a series of legal challenges, have occurred mostly at existing sites and have not had an adverse effect on the PILOT because retired coal-fired units were replaced with natural gas units. Similar changes are underway at plants in Memphis and Muhlenberg County, Kentucky. Other changes, however, could cause a shift in payments. For example, the completion of the second unit at the Watts Bar nuclear plant in Rhea County increases Tennessee's share of the PILOTs to the extent that it increases the value of the Watts Bar property,<sup>32</sup> but, the upcoming elimination of all of the coal-fired units at the Johnsonville plant in Humphreys County could decrease Tennessee's share. The retirement of coal-fired units in Alabama and Kentucky in the last three years could also affect the distribution of payments across states.<sup>33</sup> Because retired units are no longer used to produce power, TVA accelerates their depreciation so that only their residual value is included in the PILOT distribution formula.<sup>34</sup>

On November 14, 2016, TVA announced the sale of the Bellefonte property near Hollywood, Alabama. The Bellefonte facility was never operational while owned by TVA; however, the value of this property did count toward Alabama's PILOT, so the sale of Bellefonte will decrease Alabama's share of the PILOT in the future.<sup>35</sup>

TVA continues to rebalance its generation fleet, which could cause shifts in the value of power-producing property from state to state in each state's share of TVA's PILOT.

<sup>31</sup> Tennessee Valley Authority 2015f.

<sup>32</sup> Email from Stephen Schoolfield, Program Manager-Taxes, Tennessee Valley Authority, December 8, 2016.

<sup>33</sup> Tennessee Valley Authority 2013b.

<sup>34</sup> Email from Stephen Schoolfield, Program Manager-Taxes, Tennessee Valley Authority, January 6, 2016.

<sup>35</sup> Tennessee Valley Authority 2016g; Telephone interview with Stephen Schoolfield, Program Manager-Taxes, Tennessee Valley Authority, November 29, 2016.

TVA is gradually moving from coal to other power sources because of the age of its coal-fired plants and changing air quality requirements.

The 2015 IRP calls for energy efficiency savings of between 900 and 1,300 megawatts by 2023 and between 2,000 and 2,800 megawatts by 2033.<sup>36</sup> Some of that improved efficiency will occur through upgrading power transmission and distribution systems; some will occur in private homes and businesses. As customers update their homes, commercial and industrial facilities, and electrical appliances and equipment, those changes reduce existing power demand, which could reduce TVA revenues and ultimately the PILOT for all recipients if demand does not continue to grow with the population and the economy.

### **The Shift Away from Coal: Environmental and Business Reasons**

Since the 1950s, coal-fired plants have been TVA's largest single source of power, but because of their age and changing air quality requirements, the Authority is shifting emphasis from coal to other power sources (see figure 2 from the 2015 IRP). As the Authority's coal-fired power plants age, TVA must either retire them or install costly upgrades to meet new air-quality standards that tighten restrictions on the emission of particulates, sulfur dioxide, nitrogen oxides, mercury, lead, and carbon—the major byproducts of burning coal. To resolve a series of legal challenges brought under the Clean Air Act by several states, including Tennessee, and environmental groups, TVA entered into two settlement agreements in April 2011:

The first agreement is a Federal Facilities Compliance Agreement with the Environmental Protection Agency. The second agreement is with Alabama, Kentucky, North Carolina, Tennessee, and three environmental advocacy groups: the Sierra Club, National Parks Conservation Association, and Our Children's Earth Foundation. Under the Environmental Agreements, TVA agreed to retire 18 of its 59 coal-fired units by the end of 2017.<sup>37</sup>

Because the cost of upgrading existing coal-fired facilities, the relative cleanliness of other fuels, and the decreasing cost of natural gas that have resulted in a competitive advantage for other methods of generating electricity, the Authority has retired 24 coal-fired units since 2012 and will retire an additional 9 in the coming years.<sup>38</sup>

<sup>36</sup> Tennessee Valley Authority 2015e. By way of comparison, TVA's newest combined-cycle natural gas plant in Ackerman, Mississippi is capable of producing 700 megawatts of electricity. (<https://www.tva.gov/Energy/Our-Power-System/Natural-Gas/Ackerman-Combined-Cycle-Plant>).

<sup>37</sup> Tennessee Valley Authority 2016c.

<sup>38</sup> Ibid.

Figure 2. TVA Capacity Changes in Megawatts by 2023 and 2033

Source: Tennessee Valley Authority 2015d.

### Fossil Plant Retirements Required by Environmental Agreements

As a result of the settlement agreements, TVA has already retired 14 of 59 coal-fired units and will retire the remaining four coal-fired units at the Johnsonville Fossil plant before 2018. Those already retired include two of four coal-fired units at its John Sevier plant in Hawkins County, which as noted above were replaced by a combined-cycle gas plant on an adjacent site, six coal-fired units at its Johnsonville plant in Humphreys County, and six of eight units at the Widows Creek Fossil Plant in Alabama.<sup>39</sup> See table 2.

Table 2. Tennessee Valley Authority Coal-Fired Units to be Retired Under Environmental Agreements

## Fossil Plant Retirements for Business Reasons

Because of the competitive advantage over coal of other methods of generating electricity, TVA has already retired the two coal-fired units at the John Sevier Fossil Plant and one of the ten units at the Shawnee Fossil Plant in Kentucky. The Authority decided to add pollution control devices to two of the remaining coal-fired units at Shawnee rather than retire them. It retired the last two units at the Widows Creek Fossil Plant in Alabama in 2015 and sold the property.<sup>40</sup> The Authority will retire all three units at the Allen Fossil Plant in Memphis and replace them with gas-fired units on the same site by September 2018. Similarly, TVA plans to close two of three coal-fired units at the Paradise Fossil Plant in Kentucky and replace them with gas-fired units on the same site. The Authority also retired all five coal-fired units at its Colbert plant in Alabama in April 2016.<sup>41</sup> See table 3.

Table 3. Actions to be Taken at Tennessee Valley Authority Coal-Fired Units for Business Reasons

Fossil Plant	Units Affected	Existing Scrubbers and SCRs	Requirements Under Environmental Agreements	Other Actions Taken or Planned

## New Environmental Regulations: EPA's Clean Power Plan

In its Clean Power Plan (CPP), finalized in August 2015, the US Environmental Protection Agency (EPA) set carbon-pollution reduction goals for each state. The CPP rule establishes interim and final carbon dioxide (CO<sub>2</sub>) emission performance rates for two subcategories of fossil fuel-fired electric generating units (EGUs): fossil fuel-fired electric steam generating units (generally, coal- and oil-fired power plants) and natural gas-fired combined cycle generating units. The rule requires states to develop and implement plans that ensure the power plants in their state—either individually, together, or in combination with other measures—achieve the equivalent in terms of either rate or mass of the interim CO<sub>2</sub> performance rates between 2022 and 2029, and the final CO<sub>2</sub> emission performance rates by 2030. It allows each state to select the measures it prefers and “to shape their emissions reduction pathways over the 2022-29 period.”

The rule would have required states to submit a final plan or an initial submittal with an extension request by September 6, 2016, and a complete state plan no later than September 6, 2018.<sup>42</sup> But in October 2015, West Virginia et al. sued the EPA to block the CPP requirements. In February 2016, the US Supreme Court granted a request to freeze implementation of the CPP during the litigation process. The US Court of Appeals for the DC Circuit is expected to issue a decision by early 2017. Regardless of the outcome, the losing side is likely to appeal to the US Supreme Court. Because of the litigation, the EPA said it did not expect states to comply with the September 6, 2016, deadline to submit an implementation plan.<sup>43</sup>

If the CPP becomes effective, then complying with it may result in further shifts away from coal-fired power in TVA's generating network. However, it is too early to tell whether the Authority will have to retire coal-fired units in addition to those already scheduled to be retired for environmental or business reasons. According to TVA, “The impact of these rules on TVA and the states in TVA's service territory cannot be determined until the state plans are developed and approved by the EPA, but the impact on TVA could be significant.”<sup>44</sup>

## New Energy Sources to Meet the Region's Needs

As TVA retires existing coal-fired units, new energy sources are being developed to meet the region's electricity needs, including natural gas, solar, wind, and nuclear options. TVA is implementing energy efficiency (EE)

“We will look at [the EPA's Clean Power Plan] final rule more specifically to understand how the Integrated Resource Plan (IRP) can inform TVA's compliance plans but feel the study recommendations point us in a direction to meet whatever requirements are included in that rule.”

initiatives as well. The second nuclear reactor at Watts Bar Nuclear Plant in Rhea County became commercially operational on October 19, 2016.<sup>45</sup> Figure 3 shows the current and future balance of TVA's power generating sources and the shift to more energy efficiency.

**Figure 3. TVA's Power Generating Sources**

Note: A terawatt hour (TWh) is equal to a sustained power of approximately 114 megawatts for a period of one year.

Source: "Fiscal Year 2016 Conference Call." TVA Investor Relations, November 15, 2016, accessed December 13, 2016, <http://www.snl.com/Cache/1500093347.PDF?O=PDF&T=&Y=&D=&FID=1500093347&iid=>

Natural gas and nuclear power, along with energy efficiency strategies, are expected to play a growing role in the region's energy future.

As noted in past reports, TVA continues to modify its renewable energy programs within the changing market for renewables such as wind, solar, and hydroelectric power. TVA will continue to rebalance its power generating system to meet demand. These programs have no effect on TVA's gross revenues, nor do they affect power sales in any state, and so have little to no effect on PILOTs to the several states. Participants continue to buy power from their local power companies and sell all of the power they generate through a system called dual metering to TVA. Their only potential effect would be the extent to which they reduce the Authority's acquisition of new power-producing property in any particular state.

As it implements its new IRP, TVA is making substantial changes in these incentive programs. The Authority has said in the past that,

as renewable energy system costs continue to decrease and become more affordable, there is less need for subsidies for small-scale renewable generation. TVA wants to promote sustainable growth in small-scale renewable generation while continuing to support local industry and provide a smooth path to grid parity.<sup>46</sup>

<sup>45</sup> Tennessee Valley Authority 2016i.

<sup>46</sup> Tennessee Valley Authority "Green Power Providers: Frequently Asked Questions."

TVA has been encouraging the private sector to develop small and medium renewable energy projects by buying electricity from participants in two major programs. Small projects are those with a capacity of 50 kilowatts or less;<sup>47</sup> medium-sized projects are those with a capacity of more than 50 kilowatts but no more than 20 megawatts.<sup>48</sup> A 50-kilowatt solar installation can provide enough power for approximately five average-sized homes in Tennessee.<sup>49</sup> The Green Power Providers program buys power from homeowners and businesses who install small renewable energy projects, including solar, wind, biomass, and hydro.<sup>50</sup> The Green Power Providers program will continue adding new projects in 2017.<sup>51</sup> The Renewable Standard Offer (RSO) program buys power from owners of medium-sized solar, wind, biomass, or methane projects.<sup>52</sup> The RSO offering was sunset in 2015, but the program remains open to projects that have existing capacity allocations and are in the process of being completed.<sup>53</sup>

The Dispersed Power Production program, which replaces the RSO program, is open to both residential and non-residential customers. It allows customers to connect solar, wind, hydroelectric, biomass, waste, or geothermal generation systems to TVA power lines so that any unused power may be sold to TVA. These generation systems are limited to a gross output of 50 kilowatts or less, but in 2016 Distributed Solar Solutions was created as a pilot program to encourage projects that are directed by local power companies and that have individual capacities greater than 50 kilowatts but no more than five megawatts.<sup>54</sup>

TVA has controlled the cost of its renewable energy programs by limiting participation and capacity and by reducing subsidies over time. The Authority limited the RSO to 100 megawatts of new capacity per year from 2011 when it began through 2015;<sup>55</sup> it increased its annual limit on the Solar Solutions Initiative to 20 megawatts of new capacity in 2015 up from 10 megawatts when the program began in 2012;<sup>56</sup> and it limited its new Distributed Solar Solutions program to a total of 10 megawatts in 2016.<sup>57</sup> The Authority has limited Green Power Providers to 10 megawatts of new capacity per year since it first placed a cap on the program in 2012.<sup>58</sup> The

TVA has controlled the cost of its renewable energy programs by limiting participation and capacity and by reducing subsidies over time.

program's total allocation of 10 megawatts will be split equally between residential and non-residential customers in 2016.<sup>59</sup>

TVA pays RSO participants a base rate that varies seasonally and with time of day from less than three cents per kilowatt-hour to more than five cents per kilowatt-hour.<sup>60</sup> Within the RSO program, participants who generate no more than one megawatt of solar power may earn a premium of four cents per kilowatt-hour through the Solar Solutions Initiative,<sup>61</sup> down from eight cents when the program began in 2012.<sup>62</sup> Similar to its RSO participants, the Authority pays participants in its Distributed Solar Solutions program a base rate that varies seasonally and with time of day from less than four cents per kilowatt-hour to almost seven cents per kilowatt-hour.<sup>63</sup> It will no longer pay new residential Green Power Providers a premium above the retail rate,<sup>64</sup> which had already declined to two cents per kilowatt-hour<sup>65</sup> from its original twelve cents in 2012.<sup>66</sup>

According to TVA's October 2015 report on efforts to develop a method for assessing the benefits and costs associated with various forms of distributed power-generation like the ones supported by these programs, the average value for solar generation for TVA is just over seven cents per kilowatt-hour, which is less than the average retail rate charged in 2015.<sup>67</sup> In order to develop the method, TVA assembled a cross-section of participants from the Tennessee Valley region, including local power companies, the Tennessee Valley Public Power Association, various environmentally focused non-governmental entities, solar industry representatives, academia, state governments, and national research institutions. Response to the report has been mixed. Among participants who were critical of the report, while generally complimentary of the process and the effort, the Southern Environmental Law Center said the analysis did not properly consider solar power's environmental and health benefits,<sup>68</sup> and the Southern Alliance for Clean Energy, agreeing with that assessment, expressed concern that TVA already "lags behind neighboring states like Georgia and North Carolina in developing a strong solar market."<sup>69</sup> But others urged TVA to pursue the least cost source of power to keep its electric rates as low and competitive as possible.<sup>70</sup>

## Appendix A: Tennessee's Allocation Formula

The TVA Act of 1933 (TVA Act) specifically directs that 5% of the Authority's "gross proceeds" be paid as payments in lieu of taxes (PILOTs) to states and local governments where the authority owns and operates property. (48 Stat. 58-59, 16 USC. § 831.) TVA interprets "gross proceeds" as their operating revenues from the sale of power to municipalities, cooperatives, and industries. The TVA Act specifically excludes sales to federal agencies from the PILOT calculation. Payments to each state are based on the amount of TVA-owned property and sales in each state. Tennessee's share based on those two factors has been close to 60% of the total each year.

Each state determines its own method of distributing the payments. The following chart shows the formula used by the State of Tennessee in distributing the funds among the state government, its agencies, counties, and cities.

### Tennessee Valley Authority (Tennessee State Revenue Sharing Act)

*Title 67, Chapter 9, Part 1*

### From the Allocation of TVA Payments in Lieu of Taxes in Tennessee

*(after direct payments to counties and 1977-78 base payment to state, counties, and cities)*

	Basis of Apportionment (\$67-9-101)	Proration to Counties and Municipalities (\$67-9-102)
Impact fees—paid to areas with TVA construction <i>(remainder allocated to CTAS, TACIR and Four Lakes Regional Development Authority)</i>	3%	
Retained by the State	48.5%	
Paid to Local Governments	48.5%	
<i>Counties—70% of Local Share</i>		
· <i>Based on Percent of State Population</i>		30% <i>(14.55% of total)</i>
· <i>Based on Percent of State Land</i>		30% <i>(14.55% of total)</i>
· <i>Based on County's Percent of TVA Acreage in Tennessee</i>		10% <i>(4.85% of total)</i>
<i>Municipalities—30% of Local Share Based on Percent of State Population</i>		30% <i>(14.55% of total)</i>
Total Allocated by State	100%	

## Appendix B: Distribution of Counties' Share of TVA Payments in Lieu of Taxes to Tennessee by Tennessee Fiscal Year

Distribution of Counties' Share of TVA Payments in Lieu of Taxes to Tennessee  
by Tennessee Fiscal Year

## Appendix D: TVA 2015 IRP Recommendations by Resource Type

Coal: Continue with announced plans to retire units at Allen, Colbert, Johnsonville, Paradise and Widows Creek. Evaluate the potential retirement of Shawnee Fossil Plant in the mid-2020s if additional environmental controls are required. Consider retirements of fully controlled units if cost effective.

Nuclear: Pursue additional power updates at all three Browns Ferry units by 2023. Continue work on Small Modular Reactors as part of technology innovation efforts and look for opportunities for cost sharing to render these more cost-effective for our ratepayers.

Hydroelectric: Pursue an additional 50 MW of hydro capacity at TVA facilities and consider additional hydro opportunities where feasible.

Demand Response: Add between 450 and 575 MWs of demand reduction by 2023 and similar amounts by 2033, dependent on availability and cost of this customer-owned resource.

Energy Efficiency: Achieve savings between 900 and 1,300 MW by 2023 and between 2,000 and 2,800 MWs by 2033. Work with our local power company partners to refine delivery mechanisms, program designs and program efficiencies with the goal of lowering total cost and increasing deliveries of efficiency programs.

Solar: Add between 150 and 800 MW of large-scale solar by 2023 and between 3,150 and 3,800 MW of large-scale solar by 2033. The trajectory and timing of solar additions will be highly dependent on pricing, performance and integration costs.

Wind: Add between 500 and 1,750 MW by 2033, dependent on pricing, performance and integration costs. Given the variability of wind selections in the scenarios, evaluate accelerating wind deliveries into the first 10 years of the plan if operational characteristics and pricing result in lower-cost options.

Natural Gas (Combustion Turbine and Combined Cycle): Add between 700 and 2,300 MW by 2023 and between 3,900 and 5,500 MW by 2033. The key determinants of future natural gas needs are trajectories on natural gas pricing and energy efficiency and renewables pricing and availability.
