Project & DB Contract #: SR 353 Bridge over Nolichucky River, LM 0.44 (DB2401)

RFP Book No. and Section ID	Question	Reserved for Agency Response
Book 3, Section 4.1	Addendum #4 revised the bridge hydraulic sizing based on 50-year hydraulics (for meeting TDOT conveyance requirements) and 100-year backwater impacts (for meeting FEMA requirements). Based on our interpretation of Addendum #4, there is a high likelihood that the 100-year event would overtop (or inundate) the bridge low chord elevation. Please confirm that the proposed bridge design needs to meet inundation requirements.	Confirmed. See revisions to Book 3, Section 4.1 in Addendum 5.
