1 - Shall not be less than 3/8" of design nor more than 1" greater than design
2- Minor Error : Actual concrete cover greater than or equal to the designed concrete cover minus 1".
Major Error: Actual concrete cover less than the designed concrete cover minus 1".
3 - For length of beams: Computed Elastic Shortening $\pm 1 / 2^{\prime \prime}$
4 - Not more than 5\% less than the specified wall thickness
5 - Concrete cover does not include the lid. Anything less than 1 " of concrete cover for lids constitutes a major error.
NOTE: All errors in excess of two times these allowable tolerances are considered major errors and qualify for rejection.
All errors less than two times these allowable tolerances are considered minor errors.
Any missing or undersized steel is considered a major error.
