1. Introduction

The Tennessee Department of Transportation (TDOT) in cooperation with the Federal Highway Administration (FHWA) has initiated an Environmental Assessment (EA) for the proposed State Route (SR)-170 widening and realignment project in Anderson County, Tennessee (see Figure 1). The proposed improvements would widen the existing two to three-lane typical section into a four to five-lane section with two lanes in each direction with additional improvements that include sidewalks, a shared use path, and turn lanes at strategic intersections.

1.1 Alternatives Under Consideration

A No-Build Alternative and one Build Alternative are being evaluated in the EA. Each alternative is described in the subsequent text below.

1.1.1 No-Build Alternative

The No-Build Alternative would retain the existing SR-170 and roadway configuration throughout the project corridor except for those modifications to the roadway network that have been programmed and approved for implementation, as identified in TDOT's 25-Year Long Range Transportation Policy Plan,[1] State Transportation Improvement Program (STIP),[2] and the TDOT 10-Year Project Plan and would allow for routine maintenance and safety upgrades.[3]

1.1.2 Build Alternative

The proposed Build Alternative would include widening the existing two to three-lane typical section to a four-lane typical section (two 12-foot travel lanes in each direction) with a variable median and eight-foot shoulders west of Walnut Valley Road, and a five-lane section (two 12-foot travel lanes in each direction and a center 12-foot two-way left turn lane [TWLTL]) with eight-foot shoulders east of Walnut Valley Road. The project would also include curb and gutter, a five-foot sidewalk to the north, a 10-foot shared-use path to the south, and guardrails as needed. Proposed improvements would also include adding turn lanes at strategic intersections, realigning and reconfiguring several intersections along the corridor, and replacing the existing two-lane bridge over the Clinch River with a four-lane bridge with a painted median.

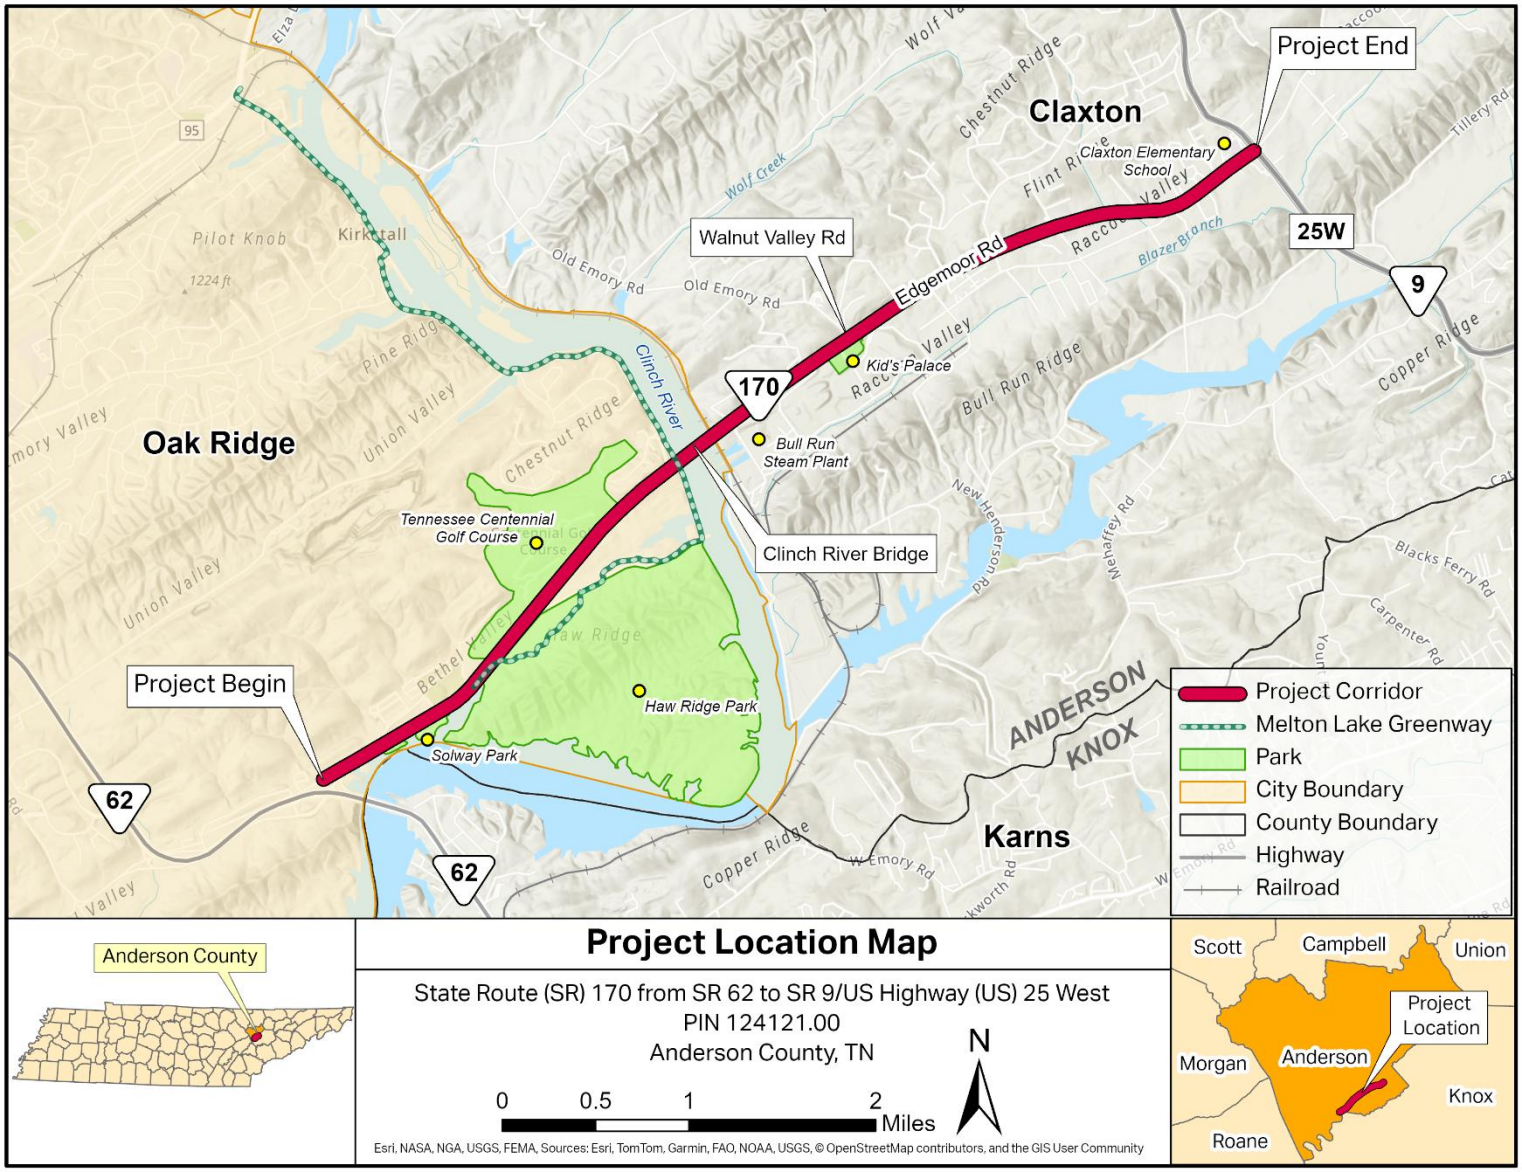
Figure 1: Project Location Map



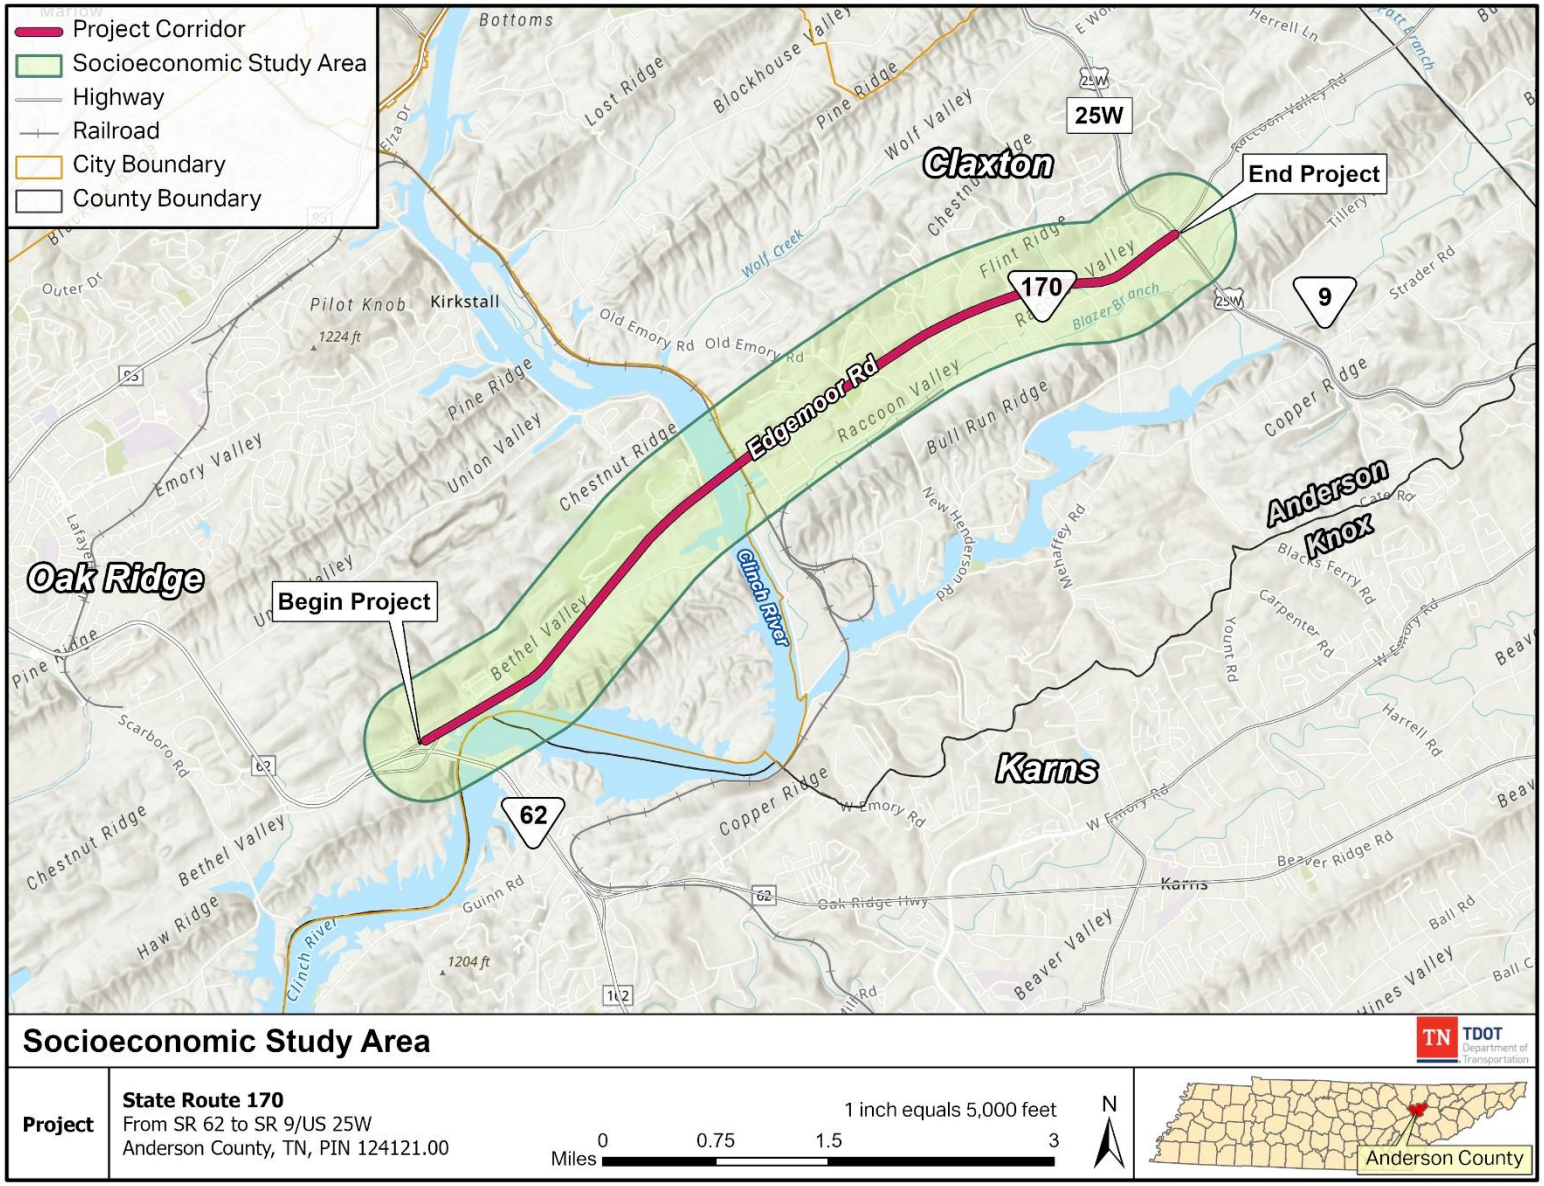
2. Focus of this Technical Memorandum

The Community Impact Assessment, Relocations, Relocations, and Economic Resources Technical Memorandum includes a Community Impact Assessment (CIA), which provides background and context for the SR-170 project and discusses the services and facilities that serve the communities along the SR-170 project corridor. This technical memorandum also identifies preliminary anticipated relocations and land acquisitions, as well as potential community stability and cohesion impacts for both the No-Build and Build Alternatives. Additionally, this technical memorandum discusses existing economic and social conditions along the SR-170 project corridor.

This memo uses a socioeconomic study area defined as a 0.5-mile radius from the project centerline. This boundary was selected because most residential, commercial, and industrial land uses along the project corridor are located within approximately 0.5 miles of the project area. This 0.5-mile socioeconomic study area is also used as the study area in EA Appendix D: Land Use and Transportation Analysis Technical Memorandum. Figure 2 shows the socioeconomic study area.

Remainder of page intentionally left blank

Figure 2: Socioeconomic Study Area



3. Community Impact Assessment

The community profile of the project provides background and context for the SR-170 project through the history of Anderson County, within which the project is located. Additionally, the community profile includes a discussion on community stability and cohesion as well as economic conditions along the project corridor and evaluates how the project could result in impacts on each.

3.1 Community History[4]

3.1.1 Anderson County, City of Oak Ridge, and Claxton

Anderson County was created in 1801 from portions of Knox and Grainger Counties. The town of Clinton, which is located approximately six miles north of the eastern terminus of the proposed project, was identified as the county seat at that time.[5] The primary industries in Anderson County were initially agriculture, milling, boat building, and wagon building. Coal mining took over as the leading industry in the mid-19th century following the construction of the railroad in the region. As the railroad expanded in Anderson County and surrounding areas after the Civil War, the coal industry continued to grow alongside it.[6, 7]

In 1936, the Tennessee Valley Authority (TVA) arrived in Anderson County to construct the hydroelectric Norris Dam, which brought electric power to the county. This establishment of electricity along with the presence of railroads and a small population made Anderson County an ideal location for the federal government's Manhattan Project during World War II. The City of Oak Ridge, which is located north of the western terminus of the proposed project, was constructed in the 1940s to provide housing for the project's labor force.[8] After the completion of the Manhattan Project, several nuclear energy research and production efforts continued at the project's facilities. The federal government sold several properties associated with the Manhattan Project in the 1950s, and Oak Ridge was officially incorporated into Anderson County in 1959. The legacy of the Manhattan Project created a research and innovation hub that still exists in and around City of Oak Ridge today.[5, 9]

The unincorporated community of Claxton, which is located at the eastern terminus of the project, began as a small farming community, similar to the origin of many towns throughout East Tennessee. The community is centered around the intersection of SR-170 and SR-9 (US-25W). Claxton Elementary School, which was likely established in the 1920s, is located at this intersection at the eastern terminus of the proposed project. Claxton saw a general influx of development in the 1940s as the Manhattan Project's labor force moved within commuting

distance of the project's facility. This pattern continued during the above-mentioned research industry expansion in the Oak Ridge area in the late 20th century.[10]

For additional information regarding the history of Anderson County, City of Oak Ridge, and Claxton, please see the Historic Architecture Assessment in EA Appendix K: Cultural Resources Technical Reports.

3.1.2 Development of Transportation Networks

The Clinch River, which extends through Anderson County, served as a primary mode of transportation for indigenous communities for many centuries prior to the arrival of white settlers in the late 18th century. Settlers then used the river to transport agricultural products via flat boats up to the Civil War in the late 19th century. Following the Civil War, the river continued to serve as an important transportation network, however, transportation growth was concentrated on the newly constructed railroad.[11, 12]

The arrival and subsequent expansion of the railroad in Anderson County and the broader region in the late 1800s created an extensive transportation network for various industries. The railroad allowed for the movement of people, goods, and services, creating opportunities for new industries like tourism and supporting the growth of existing industries like coal production.[13] In the 20th century, highway networks in and around Anderson County were developed following the passage of the Federal Aid Road Act in 1916.[14] The significance of these networks was quickly established during that time, and their prominent role in transportation continues today.

3.2 Social Conditions

Social conditions relate to the human environment and include people and housing as well as community, public, and social services. This section of this technical memorandum summarizes existing social conditions within the SR-170 project area.

3.2.1 Existing Social Conditions

Project Study Area

The socioeconomic study area is located within two communities in Anderson County, the City of Oak Ridge and Claxton. The 6.18-mile proposed project would begin in the City of Oak Ridge, where SR-170 (also known as Edgemoor Road) intersects with SR-62 and follows the current SR-170 alignment east, across the Clinch River, continuing through the unincorporated community of Claxton, and ending at SR-9 (US-25W). The project corridor – spanning from SR-62 to SR-9 (US-25W) – is classified as an Urban Minor Arterial roadway[15]. East of the Clinch River Bridge, the socioeconomic study area is primarily residential, zoned as Suburban-Residential (R-1)[16] and most of the development consists of single detached dwellings and low-density

[13] Brief summary is derived of SR-170 History Assessment of Effects Report, See **Appendix K** of the EA for the full report.
[14] Transportation Milestone in Tennessee History: https://www.tn.gov/tdot/100years-home/100years-transportation-history.html
[15] TDOT Functional Classification Maps (01a Knoxville). https://www.tn.gov/tdot/driver-how-do-i/look-at-or-order-state-maps/maps/annual-average-daily-traffic-maps1.html
[16] The Zoning Resolution of Anderson County, Tennessee defines the Suburban-Residential District as follows: "The R-1 Suburban-Residential District is intended to provide areas suitable for low-density, single and multiple-family residential development. This district is particularly suitable for areas adjacent to or near urban areas, where an adequate public water supply or public sewage service is available…" https://andersoncountyplanning.com/wp-content/uploads/2025/04/Anderson-County-Zoning-Resolution.pdf.

residential developments. The portion of the socioeconomic study area to the west of the Clinch River Bridge is primarily park space zoned as Residential, Open Space, and Reserved Districts (RG-1)[17] with some Single-Family Residential/Planned Unit Development Districts (R-1-C/PUD)[18] adjacent to the project corridor. Due to the majority of residential, commercial, and industrial sites and land uses identified along the project route being within a proximity of approximately 0.5-mile of the project area, the study area for the CIA was established with a .05-mile buffer along either side of the exiting centerline/roadway.

Population Trends and Forecasts

As a preliminary step to gather community information, data from the 2010 Decennial Census[19], 2020 Decennial Census,[20] and U.S. Census Bureau's 5-year American Community Survey (ACS) (2019-2023)[21] was analyzed to identify demographic information and population growth trends along the corridor. Where available, population data was identified and analyzed at the Census Tract (CT) and Block Group (BG) level. The proposed project is located within CT 202.01, BG 1, CT 213.03, BGs 1, 2, and 3, and CT 213.04, BG 2 in Anderson County (see Figure 2). Table 1 shows the population trends for Tennessee, Anderson County, and the identified Block Groups[22] that are located within the SR-170 socioeconomic study area. The study area overlaps two block groups within Knox County, as shown in Figure 2. However, any persons or businesses within these two block groups (CT 59.07, BG 2 and 59.08, BG 2) would be unlikely to be impacted directly by the proposed project since the Clinch River separates these block groups from the proposed project.

As shown in Table 1, Anderson County has experienced a population increase of around four percent from 2010 to 2023, while the population within the socioeconomic study area has seen a 50 percent population increase from 2010 to 2023.[23]

Table 1: Population Data 2010 to 2023

Geographic Area	Population			Percent Change	Population Projection[24]			Percent Change[25]
	2010	2020	2023	2010-2023	2030	2040	2050	2023-2050
Socio-economic Study Area	4,317[26]	12,965	13,524	49.9%	NA	NA	NA	NA

[17] The Zoning Ordinance for the City of Oak Ridge, Tennessee defines the RG-1 District as follows: "The RG-1, Residential, Open Space and Reserved District is established to provide suitable areas for large lot, low-density residential development characterized by an open appearance." https://www.oakridgetn.gov/DocumentCenter/View/119/Zoning-Ordinance-PDF.

[18] The Zoning Ordinance for the City of Oak Ridge, Tennessee defines the PUD District as follows: "The purpose of the planned unit development (PUD) district is to allow the creation of a more desirable environment within residential and commercial districts through the application of flexible and diversified land development techniques under a comprehensive plan and program that is professionally prepared." https://www.oakridgetn.gov/DocumentCenter/View/119/Zoning-Ordinance-PDF.

[22] Socioeconomic study area combines population data for CT 202.01, BG 1; CT 213.03, BGs 1, 2, and 3; CT 213.04, BG 2, CT 59.07, BG 2; and CT 59.08, BG 2, when available.

[23] Population projections from the Boyd Center for Business and Economic Research at the University of Tennessee are also presented in Table 1. The Boyd Center develops population projections for all Tennessee counties every two 2 years. Projections are currently available from 2023 through 2070. Projection estimates for 2030, 2040, and 2050 were selected to demonstrate the estimated population changes in Anderson County and Tennessee up through the design year (2049). These projections demonstrate that Anderson County's population is anticipated to increase between 2023 and 2050.

[24] *Boyd Center for Business and Economic Research, University of Tennessee, Knoxville. 2022-2070 Projections. Population projections* are published every two years, with the latest release date being August 7, 2024. See **Attachment E.2**.

[25] *Percent Change = (Later Year Population – Earlier Year Population)/Earlier Year Population x 100*

[26] 2010 Decennial Census data was available for CT 202.01, BG 1 and CT 59.08, BG 2 only.

Geographic Area	Population			Percent Change	Population Projection[24]			Percent Change[25]
	2010	2020	2023	2010-2023	2030	2040	2050	2023-2050

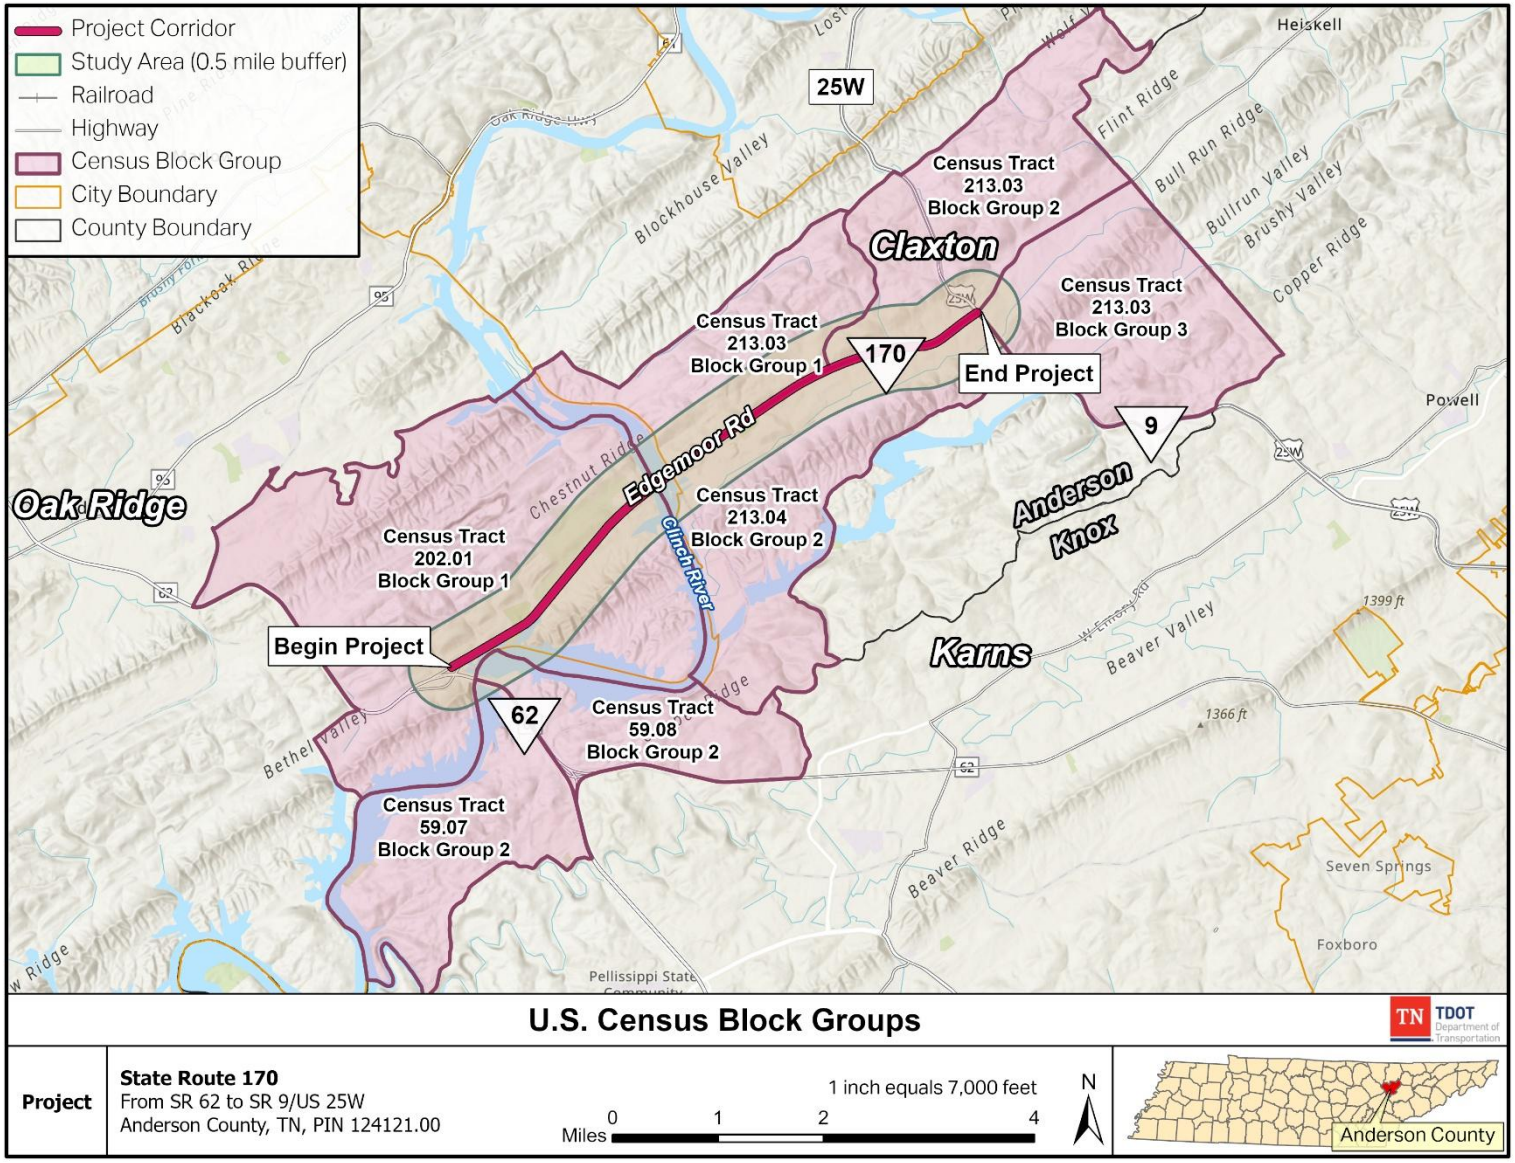
Figure 3: Census Block Groups in the Socioeconomic Study Area



3.2.2 Social Characteristics of Individuals within the Socioeconomic Study Area

This section of the technical memorandum discusses various social characteristics for Anderson County and Tennessee. The social characteristics data was obtained using U.S. Census Bureau's ACS datasets.[27] See Attachment E.3 for supporting documentation related to the social characteristics data discussed in this section, including data tables related to age, education, literacy, limited English proficiency, disability, health, car ownership, internet access, median household income in Tennessee and Anderson County.

Age

In Anderson County, approximately 21 percent of the population is under the age of 18 (slightly lower than the statewide average of 22 percent) and approximately 20 percent of the population is over the age of 65 (higher than the statewide average of 17 percent)[28]. See Attachment E.3 and Table 2 for age data.

Education

The percentage of the population with a high school degree, General Education Development (GED) certification, or similar alternate credential in Anderson County is approximately 33 percent, which is slightly higher than the statewide average of 31 percent[29]. The percentage of the population with a bachelor's degree or higher is approximately 24 percent, which is lower than the statewide average of 30 percent. See Attachment E.3 and Table 2 for education data.

Literacy

The Program for the International Assessment of Adult Competencies (PIAAC) is a large-scale survey of adult skills and competencies. Table 2, below, includes summarized information from the PIAAC data for literacy in Tennessee and Anderson County, noting for each the percentage of the population at or below Level 1 (low proficiency), at Level 2 (medium proficiency), and at or above Level 3 (high proficiency) for literacy.[30] When compared with Tennessee percentages, Anderson County has a lower percentage of the population at or below Level 1 (20 percent compared to 22 percent), the same percentage of the population at Level 2 (38 percent), and a higher percentage of the population at or above Level 3 (42 percent compared to 40 percent). See Attachment E.3 and Table 2 for literacy data.

Limited English Proficiency (LEP)

Approximately one percent of Anderson County's population is identified as having limited English proficiency (LEP), which is slightly lower than the statewide percentage of close to 2 percent[31]. See Attachment E.3 and Table 2 for LEP data.

Disability

Within Anderson County, approximately 20 percent of the average population (excluding active duty military personnel and individuals living in long-term care or correctional facilities) have a disability, which is higher than the statewide percentage of 15 percent[32]. See Attachment E.3 and Table 2 for disability data.

Health

According to the Tennessee Department of Health 2014-2017 statistics[33], the leading cause of death in both Tennessee and Anderson County is diseases of the heart. See Attachment E.3 and Table 2.

Car Ownership

The majority of households in Anderson County have a vehicle (93.7 percent) and only six percent of households do not have any vehicles, which is similar to the statewide average of five percent[34]. See Attachment E.3 and Table 2 for car ownership data.

Internet Access

Approximately 88 percent of households in Anderson County have access to broadband internet, which is slightly higher than the statewide average for Tennessee at 87 percent[35]. See Attachment E.3 and Table 2 for internet access data.

Median Household Income

The median household income for Anderson County is $60,633, which is lower than the statewide average of $67,097[36]. See Attachment E.3 and Table 2 for household income data.

[40] Level 1 is considered "low proficiency." According to the PIAAC, "Adults at this level can be considered at risk for difficulties using or comprehending print material." See **Attachment E.3** for more information on PIAAC proficiency measures.
[41] Level 2 is considered "medium proficiency." According to the PIAAC, "Adults at this level can be considered nearing proficiency but still struggling to perform tasks with text-based information." See **Attachment E.3** for more information on PIAAC proficiency measures.
[42] Level 3 is considered "high proficiency." According to the PIAAC, "Adults at this level can be considered proficient at working with information and ideas in texts." See **Attachment E.3** for more information on PIAAC proficiency measures.
[43] Median Household Income for the socioeconomic study area was determined by averaging the median household income for all seven Census Block Groups located within the socioeconomic study area.

3.2.3 Subsidized Housing

The federal government provides housing assistance to low-income renters, predominantly through subsidies provided under programs administered by the U.S. Department of Housing and Urban Development (HUD). Table 3 below summarizes the availability and occupancy for subsidized housing in Tennessee and Anderson County. No subsidized housing, including Section 8 housing, is located along the project corridor. Therefore, no subsidized units would be impacted by the Build Alternative. See **Attachment E.4** and Table 3 for Subsidized Housing data.

Table 3: Subsidized Housing Availability and Occupancy[44]

Metric	Tennessee	Anderson County
Subsidized Units Available	106,327	1,864
Percent Occupied	88%	86%

4. Preliminary Relocations and Land Acquisitions

The acquisition of right-of-way (ROW) for a new transportation project often requires the purchase or transfer of property owned by individuals, corporations, or other governmental agencies. The land to be acquired for a transportation project may currently be used for residential, commercial, industrial, institutional, or other purposes and, as a result of the acquisition, the current occupants of the land could be displaced from their current premises and relocated elsewhere.

Based on a review of the Line and Grade Plans (dated March 4, 2025 [124121.01] and February 9, 2025 [124121.02]) (included in *EA Appendix A: STIP, Project Background, and Line and Grade Plans*), a total of 216 parcels are located within the SR-170 project limits. Of these parcels, acquisition of ROW, permanent easements, and/or temporary easements is anticipated from 154 parcels.

Table 4 (below) outlines the total proposed acquisition amounts for the Build Alternative based on the Line and Grade Plans, which can be found in *EA Appendix A: STIP, Project Background, and Line and Grade Plans*.

Table 4: Right-of-Way and Easement Acquisitions[45]

ROW Acquisition (Acres)	Permanent Easement (Acres)	Total Permanent (Acres)	Temporary Easement (Acres)
67.32	**27.71**	**95.34**	**9.50**

4.1 Relocation Plan

The TDOT ROW Division prepares a Conceptual Stage Relocation Plan (CSRP) for TDOT projects which are in the initial planning phases of project development. The CSRP is developed to identify any buildings or structures which may potentially be displaced by construction of the Build Alternative, including but not limited to single family residences, mobile-home residences, multi-family residences, businesses, and non-profit organizations. In addition, in support of the CSRP, the TDOT ROW Division examines the real estate market within the vicinity of the SR-170

[44] U.S. Department of HUD. Picture of Subsidized Households Dataset. 2023 based on 2020 Census. *https://www.huduser.gov/portal/datasets/assthsg.html. Accessed May 2025. See* **Attachment E.3**.
*Please Note, the Picture of Subsidized Households Dataset only includes information on HUD administered subsidies and does not cover other housing subsidy programs unless they also receive subsidies from HUD programs.
[45] *Source: Line and Grade Plans (dated March 4, 2025 (124121.01) and February 9, 2025 (124121.02)), included in* ***EA Appendix A***.

project socioeconomic study area in order to determine whether or not replacement housing or commercial properties are available for relocating any of the identified buildings or structures.

For the proposed SR-170 project, a CSRP was prepared for the Build Alternative in July 2025, based on a review of the Line and Grade Plans (included in *EA Appendix A: STIP, Project Background, and Line and Grade Plans*). The CSRP indicated that approximately 87 properties (33 single-family residences, 8 mobile-home residences, 28 multi-family residences, and 18 businesses) are anticipated to be relocated as a result of the Build Alternative. See Attachment E.4 for a copy of the CSRP and the Marked Plans.

Table 5 identifies the anticipated number of potential relocations identified within the limits of the Build Alternative. Please note that this information is preliminary in nature and is subject to modification/minimization as the project progresses through the development process.

Table 5: Number of Structures Impacted by the Build Alternative[46]

Structure Type	Number of Structures within the Limits of the Build Alternative
Single Family Residences	33
Multi-Family Residences	28
Mobile-Home Residences	8
Businesses	18
Non-profits	0

As summarized in the CSRP, the 28 multi-family residences are located within two housing units, one location (Tract 123) consisting of four residential units and one location (Tract 192) consisting of 24 condominium units. Several of the identified single family or mobile-home relocations were unable to be verified and the ROW Division will continue to refine the results of this preliminary effort. The CSRP concludes that replacement housing does not appear to be an issue in regard to this project as more than 100 homes are available for sale or rent within 25 miles of the project area.

For the 18 identified potential business relocations, only 13 storefronts appeared to currently be occupied by an active business. Several of the business storefronts (occupied and vacant) are co-located within the same tract. Tract 108 has five active businesses and two vacant storefronts, Tract 123 contains one active business and two vacant buildings, and Tract 121 has two active businesses sharing one building. The CSRP concludes that the project would not negatively impact the economy of the area.

Overall, the CSRP concluded that, while there are potential relocations that would result from the proposed project, it does not appear that the project would be significantly environmentally impactful. As the proposed project continues being developed and designed, it is possible that further refinements will reduce the number of potential relocations.

4.2 TDOT's Right-of-Way Relocation Process

TDOT will make relocation assistance available to all eligible persons impacted by this project, including residences, businesses, farm operations, non-profit organizations, and those requiring special services or assistance. The TDOT Regional Relocation Staff will administer the relocation program under the rules, policies, and procedures set forth in the Federal Uniform Relocation

[46] Source: SR-170 Conceptual Stage Relocation Plan, July 2025. See **Attachment E.4**.

Assistance and Real Property Acquisition Policies Act of 1970,[47] as amended, the Uniform Relocation Assistance Act of 1972, implementing federal regulations, Tennessee Code Annotated (TCA) 13-11-101 through 119,[48] The State of Tennessee Relocation Assistance Brochure,[49] and Chapter IX of the State of Tennessee Department of Transportation Right-of-Way Manual.[50] TDOT's relocation program is practical and will allow for the efficient relocation of all eligible displaced persons in accordance with State and Federal Guidelines.

TDOT provides advance notification of proposed ROW acquisition. The TDOT ROW Division has the responsibility, once a project is approved, of appraising, purchasing and, if required, assisting individuals, families, or businesses in relocating. Before acquiring property, all properties are appraised based on comparable sales and land use values in the surrounding areas.

The value of the property to be acquired is established by using independent real estate appraisers who prepare, for TDOT's use, written appraisals using actual sales data in the surrounding community.

4.3 Appraisal Process

Following the completion of an appraisal to determine the value of a property that will be acquired, TDOT ROW appraisal staff will review the findings to ensure that the appraisal was accurately conducted. Property owners are then offered fair market value for their property rights, as TDOT desires to pay fair market value for the necessary property. TDOT then designates a relocation agent to carry out the relocation assistance and payments program.

An informational TDOT Relocation Assistance Program Brochure[51] outlines the services offered and any payments for which impacted individuals may be eligible, such as moving expenses and replacement housing benefits for owners and tenants. The pamphlet also outlines the eligibility requirements for receiving these payments. More detailed information on TDOT's Relocation Assistance Program can be found at: https://www.tn.gov/tdot/right-of-way-division/.

4.4 Availability of Replacement Housing

According to the CSRP, in the event of any relocations, there may be issues of finding suitable replacement housing for any potential residential relocations. An examination of the Anderson County residential real estate market near the SR-170 socioeconomic study area indicates an adequate supply of available residential property to satisfy the relocation requirements of the 69 potential residential relocations.[52]

4.4.1 Replacement Housing Unavailable Within Project Area

In the event suitable replacement housing is not identified in the immediate vicinity of the SR-170 socioeconomic study area, the replacement housing payment may be calculated by using an estimate for new construction costs based on a detailed estimate from a licensed contractor who

[51] State of Tennessee Relocation Assistance Brochure: *https://www.tn.gov/content/dam/tn/tdot/right-of-way-division/brochures/ROW%20Res.%20Relocation%202024.pdf*
[52] Source: SR-170 Conceptual Stage Relocation Plan, July 2025. See **Attachment E.4.**

is willing and able to construct the replacement dwelling at the specified cost.[53] Additionally, the asking price of an available site in a neighborhood of equivalent value to the property to be displaced would be added to the cost estimate.

Impacted residents do not have to build on the site used in determining the cost estimate and are given the option to identify alternate vacant land for the construction of the replacement dwelling. At this point, TDOT would provide an acquisition payment towards the construction of the replacement dwelling. Impacted residents would have 12 months to construct their new home. Additionally, the new replacement property must be determined to be "Decent, Safe, and Sanitary,"[54] a standard which, among other criteria, requires that the replacement dwelling have one bedroom per family member. Furthermore, it is TDOT's intent to keep children in the same school zone and in some cases the actual square footage of the home could increase in the replacement home.

5. Community Stability and Cohesion

The following sections discuss the existing community conditions, services, and facilities within the SR-170 socioeconomic study area.

5.1 Existing Community Conditions

The socioeconomic study area is characterized as rural with some single- and multi-family residential areas and forested recreational areas.

Refer to *EA Appendix D: Land Use and Transportation Analysis Technical Memorandum*, for figures depicting the existing land use and zoning within the socioeconomic study area.

5.1.1 Residential

A review of historical satellite imagery within the SR-170 socioeconomic study area shows that since 2000 residential density has remained consistent in the eastern section of the proposed project located within the community of Claxton, while new development has been more noticeable at the western end, in the City of Oak Ridge. There has been some new development in the unincorporated areas; however, it is less dense than the residential development in the City of Oak Ridge.

Refer to *EA Appendix D: Land Use and Transportation Analysis Technical Memorandum,* for more details regarding existing land use and zoning.

5.1.2 Farmland

A review of the data contained in the U.S. Census of Agriculture (USCA), which is conducted every five years, provides a picture of Anderson County's farmland trends. Data from 2022 is the most recent USCA data available. Over a 25-year period from 1997 to 2022, the number of individual farms increased by 4.8 percent, the average farm size decreased by 17.9 percent, and the amount of land in farms decreased by 14.2 percent in Anderson County.

[53] Refer to TDOT's Right-of-Way Procedures Manual (available at: https://www.tn.gov/tdot/right-of-way-division.html) for additional information on when a displacement may qualify for payment based on new construction and how that payment amount would be determined.
[54] 23 CFR 700.55: https://www.law.cornell.edu/cfr/text/25/700.55

Refer to *EA Appendix F: Farmland, Soils, and Floodplain Analysis Technical Memorandum*, for additional information on farmland within the SR-170 socioeconomic study area.

5.2 Community Services and Facilities

5.2.1 Community Facilities Within or Adjacent to the Project Footprint

Community services and facilities include places of worship, public parks and recreational facilities, educational facilities, social services, healthcare facilities, and public safety facilities (police, fire, and rescue). A total of 16 existing community facilities within or immediately adjacent to the limits of the Build Alternative were identified and are listed in and displayed in Table 6 and Figure 3.

Table 6: Community Facilities Within or Adjacent to the Limits of the Build Alternative[55]

Facility	Address
Within the Limits of the Build Alternative	
Oak Ridge Memorial Park *(Cemetery)*	1501 Bethel Valley Rd, Oak Ridge, TN 37830
Solway Park*	Edgemoor Rd, Oak Ridge, TN 37830
Haw Ridge Park*	1901 Edgemoor Rd, Oak Ridge, TN 37830
The Dirt Lab*	289 Old Edgemoor Rd, Oak Ridge, TN 37830
Melton Lake Greenway*	1901 Edgemoor Rd, Oak Ridge, TN 37830
Tennessee Centennial Golf Course	101 Centennial Blvd, Oak Ridge, TN 37830
Kid's Palace (Children's playground)[56]	1071 Edgemoor Rd, Clinton, TN 37716
Woodhaven Memorial Gardens *(Cemetery)*	160 Edgemoor Rd, Powell, TN 37849
Claxton Elementary School** (Current location)	2218 Clinton Hwy, Powell, TN 37849
Adjacent to the Limits of the Build Alternative	
Fellowship West Church	8000 River Dr, Oak Ridge, TN 37830
Edgemoor Baptist Church	330 Old Emory Rd, Clinton, TN 37716
Valley View Church	815 Old Edgemoor Ln, Clinton, TN 37716
Claxton Church of Christ	535 Old Edgemoor Ln, Powell, TN 37849
Claxton Volunteer Fire Department	2194 Clinton Hwy, Powell, TN 37849
Zion Baptist Church	2170 Clinton Hwy, Powell, TN 37849
Claxton Elementary School** (Future location)	105 Fellowship Ln, Powell, TN 37849
Early Learning Tree	114 Raccoon Valley Rd, Powell, TN 37849

*Note: * These resources are co-located within TVA's Melton Hill Reservoir. For more information, see EA Appendix H: Parks and Recreation/Section 4(f)/Section 6(f) Technical Memorandum*
*** The current location of the Claxton Elementary School will be decommissioned upon completion of the new site. Therefore, the resource is counted as one.*

Several parks and recreational facilities located within the limits of the Build Alternative are further discussed below:

[55] *Source: Google Earth (reviewed on May 1st, 2025) https://earth.google.com/web/.*
[56] The Kid's Palace is a public children's park on a TVA parcel, managed by Anderson County. There is also a ballpark and a community center on the property, but both are leased to a private entity, Optimist Club of Claxton, and not available for public use.

Solway Park

Solway Park is an approximately 14.4-acre site that offers several recreational activities. The park is located on the south side of SR-170, and it is separated into two peninsulas at the edge of Melton Hill Lake. The park includes a boat ramp, picnic tables, fishing pier, and parking lots.

Haw Ridge Park

Haw Ridge Park is a 780-acre site that includes over 30 miles of trails and five miles of shoreline. Melton Lake Greenway Trail (see *Section 5.2.1.4*, below, for more details) and Haw Ridge Park Trail share a trailhead and parking area on the south side of SR-170 within the proposed project's area. People visit the park for activities such as hiking, mountain biking, horseback riding, kayaking, canoeing, and seasonal hunting.

Melton Lake Greenway

Melton Lake Greenway is a paved greenway that extends approximately 5.6 miles, beginning at the Haw Ridge Park parking lot and extending through Haw Ridge Park and along the Clinch River to SR-95. The greenway includes benches and scenic river views. Melton Lake Greenway interacts with the SR-170 corridor at several locations, including the Haw Ridge Park parking area/trailhead, where the greenway begins on the south side of SR-170 and runs parallel to the roadway for several hundred feet, and the segment of greenway that crosses under the SR-170 bridge over Clinch River through existing TDOT ROW. Melton Lake Greenway also has a parking area adjacent to the project area, on Melton Lake Drive north of the intersection with SR-170, and runs northward, parallel to Melton Lake Drive.

Melton Hill Reservoir

Melton Hill Reservoir is on the Clinch River in East Tennessee and extends nearly 57 miles upstream from Melton Hill Dam to Norris Dam. The Melton Hill Dam is operated by the TVA, and the TVA owns much of the land surrounding the reservoir, using it for recreational purposes and shoreline management.

Tennessee Centennial Golf Course

The Tennessee Centennial Golf Course is a publicly owned golf course owned by the City of Oak Ridge, which is located on the northern side of SR-170 between Harbour Pointe Lane and Centennial Bluff Boulevard. The golf course offers memberships, but it is also open to the general public.

Kid's Palace (Children's playground)

The Kid's Palace is a children's playground managed by Anderson County. The playground is located within the property of TVA's Bull Run Fossil Plant. Anderson County's lease with TVA will expire December 1, 2025; and the playground is scheduled to be closed at this time. See*EA Appendix H: Parks and Recreation/Section 4(f)/Section 6(f) Technical Memorandum for a copy of the agreement*. There is also a ballpark and a community center on the property, but they are leased to a private entity, the Claxton Chapter of the Optimist Club, and are not available for public use.

Claxton Elementary School (current)

Claxton Elementary School is located at the eastern end of the project corridor and adjacent to SR-170 at 2218 Clinton Highway. The school is part of the Anderson County school system and serves just over 500 students. The school's athletic field and children's playground are located immediately adjacent to SR-170. The playfields are only available to school attendees and are not available to the general public. The current school building is over 100 years old and a new

school is being built at the site of the former Crossroads Academy[57] further north on SR-170 and SR-9 (US-25W) from its current location.

More information on potential impacts associated with each of the above resources can be found in *EA Appendix H: Parks and Recreation/Section 4(f)/Section 6(f) Technical Memorandum*.

Remainder of page intentionally left blank

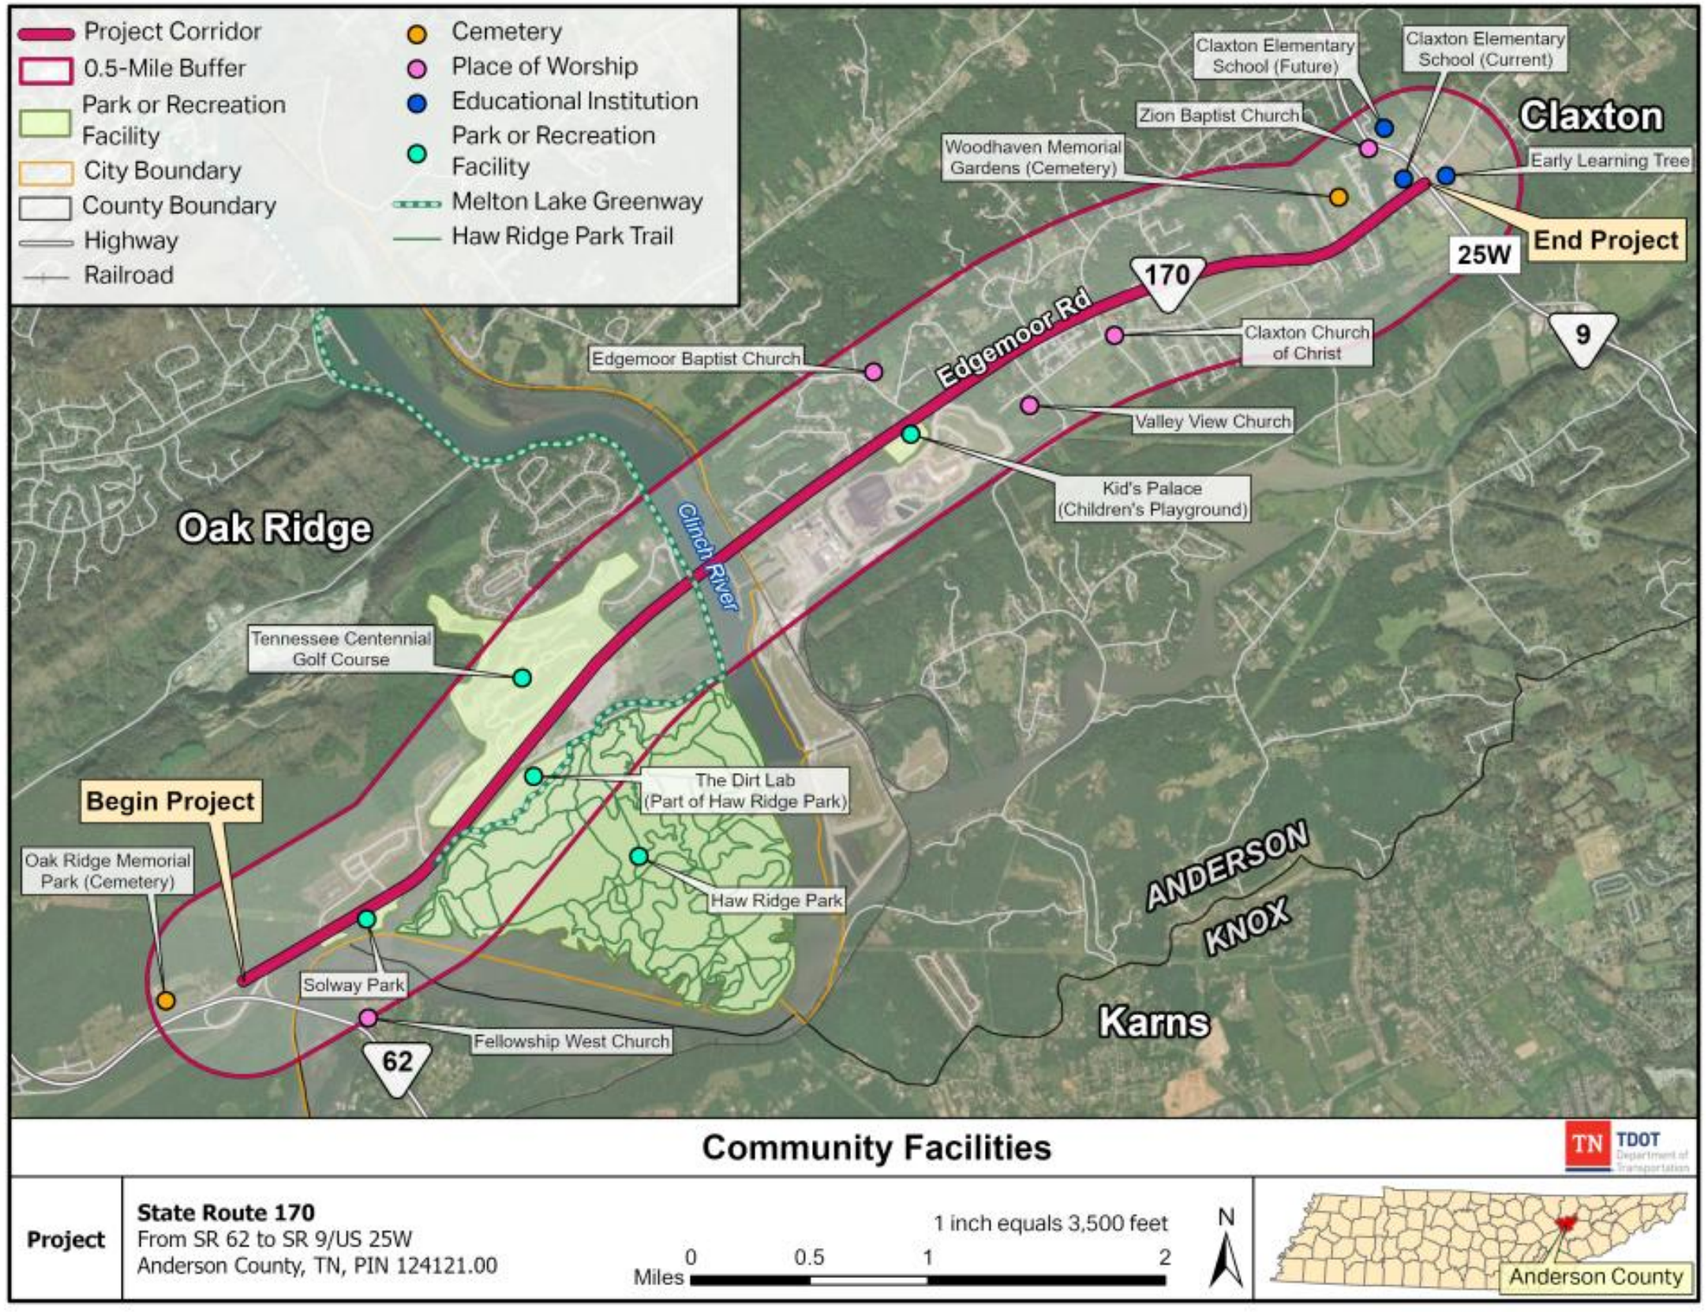
Figure 4: Community Facilities Within or Adjacent to the Limits of the Build Alternative



5.2.2 Additional Services and Facilities Serving the Project Area

Law enforcement in the SR-170 socioeconomic study area is administered by the Anderson County Sheriff's Office. The Anderson County Sheriff's Office is located in the City of Clinton, approximately 4.5 miles north of the intersection of SR-170 and SR-9 (US-25W), the Build Alternative's eastern terminus. Fire protection in the SR-170 socioeconomic study area is provided by the City of Oak Ridge Fire Department and Claxton Volunteer Fire Department. The Oak Ridge Fire Department is located in downtown Oak Ridge, approximately six miles west of the SR-170 project's western terminus. The Claxton Volunteer Fire Department is located on SR-9 (US-25W), approximately 0.2 mile north of the SR-170 project's eastern terminus.

A fixed public transit service route is not located along the project corridor; however, Oak Ridge provides door-to-door paratransit services on a reservation basis to city residents from Monday through Saturday.[58] The East Tennessee Human Resource Agency also provides paratransit services on a reservation basis to residents in Anderson County, including residents along the project corridor.[59]

In addition to Claxton Elementary School, several Anderson County schools are located near the project corridor. Powell Middle School is approximately five miles south of the eastern terminus of the project, and Clinton High School is five miles north of the project's eastern terminus. The Anderson County School District provides transportation for students to and from these schools. Six school buses utilize SR-170, including parts of the project corridor, to transport students to and from school.[60] Construction of the Build Alternative would be phased so that SR-170 would remain open throughout the duration of construction. Refer to *EA Appendix A: STIP, Project Background, and Line and Grade Plans*, for more details regarding the proposed traffic control plans.

Utility services of the SR-170 socioeconomic study area include electricity, natural gas, water, wastewater, and internet.

- Electricity: The Clinton Utilities Board, with electricity provided by the TVA, serves the electrical needs of Anderson County.
- Natural Gas: The Oak Ridge Utility District and Powell Clinch Utility District serve the county's natural gas needs.
- Water: The Anderson County Water Authority, with water provided by the Clinch River, serves the county's water needs.
- Wastewater and Water Treatment: Wastewater and Water Treatment in Oak Ridge is overseen by the city's Public Works Department. The Clinton Utilities Board provides water and wastewater services to Claxton residents.
- Internet: Internet in Anderson County is provided by AT&T and i4C Tel.

Underground and above-ground facilities are currently located within the existing ROW or immediately adjacent to it.

[58] Oak Ridge Transit: https://ethrapublictransit.org/oak-ridge-transit
[59] East Tennessee Human Resource Agency Transit: https://www.ethra.org/programs/16/public-transit/
[60] On 06/03/2025, the project team confirmed via telephone that six (6) Claxton Bus Lines buses use SR-170 on their school bus routes.

5.3 Community Stability and Cohesion Impacts

There are several ways that transportation projects can disrupt community cohesion:

- Large-scale relocation of residents and/or businesses;
- Removal of popular meeting places or community facilities; and/or
- Creating a physical or perceived barrier that discourages interaction across the roadway.

5.3.1 No-Build Alternative

The No-Build Alternative would leave the SR-170 socioeconomic study area as it currently exists, except for modifications to the roadway network that have been programmed and approved for implementation, or for routine maintenance and safety upgrades of the existing roadway system as needed. Therefore, the No-Build Alternative would not disrupt access to or relocate any community facilities within the SR-170 socioeconomic study area and would not create a new physical or perceived barrier in the community that would discourage interaction.

5.3.2 Build Alternative

Community Cohesion Related to the Relocation of Residences and Businesses

Structures located within the limits of the Build Alternative have the potential to be relocated. There are 69 potential residential locations. There are also 18 potential business relocations. Many of the businesses are located in the unincorporated Claxton Community and are accessed by SR-170.

Community Cohesion Related to Relocating Community Facilities

The Build Alternative is anticipated to impact five of the 16 community facilities or services identified within or adjacent to the limits of the Build Alternative. Partial acquisition of parcels associated with the Tennessee Centennial Golf Course, Haw Ridge Park, Melton Lake Greenway, Solway Park, and Woodhaven Memorial Gardens (cemetery) is anticipated, as shown in Table 7 below.

None of the five impacted resources would be relocated. Access to these facilities would be maintained during construction, and the function of the properties would remain post construction.

Community Cohesion Related to Barriers

SR-170 was constructed in the 1950s and 60s as a two-lane, Urban Minor Arterial road within the Oak Ridge city limits and as a Rural Major Collector from the Clinch River Bridge to SR-9 (US-25W). (Note: the functional classification of the roadway has been upgraded to Urban Minor Arterial east of the Clinch River since the preparation of the 2011 East Tennessee South Rural Planning Organization/TDOT Transportation Planning Report.[61] At the time it was classified as a Rural Major Collector.) It has served as an important link connecting businesses and residences in the City of Oak Ridge to the community of Claxton. Since the construction of SR-170, both Oak Ridge and Claxton have grown, with houses, businesses, and recreational facilities being constructed along parts of SR-170 (See *EA Appendix D: Land Use and Transportation Analysis Technical Memorandum* for more information).

Due to the development of residences, businesses, and recreational facilities in the area since the initial construction of SR-170, and accounting for the scope of the proposed project to improve the existing roadway, it is unlikely that the Build Alternative would introduce a new perceived

[61] East Tennessee South Rural Planning Organization/Tennessee Department of Transportation, SR 170 TPR 2011 https://www.tn.gov/content/dam/tn/tdot/documents/government-how-do-i-documents/Studies/StatewidePlanning/studies-ApprovedTPRwithSignatures.pdf (accessed 6/18/2025)

barrier or alter current perceived barriers in a way that discourages interaction across the roadway. The proposed project would also include a five-foot-wide sidewalk on the north side of SR-170 and a 10-foot-wide shared-use path on the south side of SR-170 to provide multimodal connectivity along the corridor.

Because the proposed design of the Build Alternative is also intended to limit the introduction of new physical barriers (such as a new location roadway or major change in alignment) which could separate residences, community facilities, and businesses from one another, impacts are anticipated to be minimal as it relates to the creation of a new physical barrier in the community.

Community Cohesion Conclusion

As summarized below, under the Build Alternative, construction of the proposed project would not result in impacts related to community cohesion within the project area.

- **Relocations** – The Build Alternative would result in 87 potential relocations (33 single-family homes, 28 multi-family homes, 8 mobile-homes, and 18 businesses [13 occupied storefronts]). The density and character of the community following the relocation of residences and businesses as a result of the Build Alternative would be consistent with the current nature of the existing community. Despite these relocations, the existing connectivity within the surrounding community would not be adversely affected.

- **Community Facilities** – Five community facilities are anticipated to be impacted under the Build Alternative as a result of minor ROW/easement acquisition. However, no community facilities are anticipated to be relocated. Access to these community facilities would be maintained during construction, and the function of the properties would remain post-construction. The Build Alternative aims to address the need for increased connectivity in the region. Community facilities, such as the numerous recreation sites along the corridor, would continue to support the community under the Build Alternative.

- **Creation of Barriers** –The Build Alternative consists primarily of widening the existing SR-170 roadway and addressing geometric deficiencies through minor alignment shifts. The project provides crosswalks at all intersections and avoids the creation of new physical barriers in the community.

- **Community Stability and Cohesion Impact Summary** – The proposed Build Alternative would impact residents and businesses, due to the availability of sufficient housing stock, and available commercial space, the project would not be anticipated to affect the local economy. Of the potential commercial impacts, 25 percent are currently vacant, and would not affect active businesses. In addition, approximately 40 percent of the anticipated residential displacements would be from two buildings. Therefore, the project would not adversely destabilize the community. With the maintaining of existing community facilities and improvements in multimodal connectivity, community cohesion would be retained.

Table 7: Build Alternative Community Facility ROW Impacts

Community facility	Right-of-Way (Acre)	Permanent Easement (Acre)	Temporary Easement (Acre)	Summary
Tennessee Centennial Golf Course	3.58	0.0	0.0	The Build Alternative would acquire a minor amount of ROW from the frontage of the tract that would not impact the golf course's structures, recreational facilities, or regularly maintained areas. Access to the facility would be maintained during construction and the function of the property would remain during and post construction.
Haw Ridge Park	1.77	0.0	0.0	The Build Alternative would acquire a minor amount of ROW from the grassed frontage of the park. Access to the facility would be maintained during construction and the function of the property would remain during and post construction
Melton Lake Greenway	Land containing 713 linear feet of trail	0.0	0.0	The Build Alternative would acquire approximately 713 linear feet of the greenway near Haw Ridge Park. The section of the greenway located under the Clinch River Bridge would be temporarily closed during construction.
Solway Park	0.99	0.0	0.0	The Build Alternative would acquire a minor amount of ROW from the frontage of the tract that would not impact the park's recreational facilities. Minor impacts to the existing parking lot would occur. Access to the facility would be maintained during construction and the function of the property would remain during and post construction.
Woodhaven Memorial Gardens (cemetery)	0.40	0.0	0.30	The Build Alternative would acquire a minor amount of ROW from the frontage of the tract that would not impact the facility's function as a funeral home and cemetery. Access to the facility would be maintained during construction and the function of the property would remain during and post-construction.
Claxton Elementary School	0.80	0.0	0.10	The Build Alternative would acquire a minor amount of ROW from the frontage of the tract. It is anticipated that the current location of the school will be decommissioned and will be moved to a new location before the construction of the proposed project begins. No impacts are anticipated at the future location of the school.

5.4 Minimization/Mitigation Measures to Address Impacts

As the design of the Build Alternative is refined, impacts to residential and business properties within the SR-170 socioeconomic study area may be reduced.

Should a property be acquired, compensation would be at fair market value. TDOT will make relocation assistance available to all eligible persons impacted by this project, including residences, businesses, farm operations, non-profit organizations, and those requiring special services or assistance. The TDOT Regional Relocation Staff will administer the relocation program under the rules, policies, and procedures set forth in the Federal Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, as amended, the Uniform Relocation Assistance Act of 1972, implementing federal regulations, TCA 13-11-101 through 119, The State of Tennessee Relocation Assistance Brochure, and Chapter IX of the State of Tennessee Department of Transportation Right-of-Way Manual.

Additionally, in the event that suitable replacement housing is not available in the immediate SR-170 socioeconomic study area, TDOT will work with individuals to identify alternate options, potentially including the construction of a new home. Both renters and mobile-home owners will also be compensated and will receive assistance from TDOT in the identification of, and relocation of their home to, a new location. Businesses subject to relocation under the Build Alternative will be compensated for their relocation to a new location, including moving costs, incidentals, and the cost to reestablish the business in a new location.

TDOT will provide advance notification of proposed ROW acquisition. The TDOT ROW Office has the responsibility, once a project is approved, of appraising, purchasing and, if required, assisting individuals, families or businesses in relocating. Before acquiring property, all properties are appraised based on comparable sales and land use values in the surrounding areas.

Construction of the Build Alternative would be phased so that SR-170 would remain open throughout the duration of construction for the general public to access the identified community facilities. Refer to *EA Appendix C Traffic Capacity and Safety Analysis Technical Memorandum*, for more details regarding the proposed traffic control plans.

Additionally, the Build Alternative would be designed to minimize impacts to the community by avoiding the creation of a new physical barrier by widening the existing SR-170 roadway except in locations where minor alignment shifts are needed to correct roadway geometric deficiencies.

Table 7 below provides an overview of the potential community stability and cohesion impacts under the Build and No-Build Alternative.

Table 8: Potential Community Stability and Cohesion Impacts

Impact Category	No Build Alternative Effect Determination	Build Alternative Effect Determination	Minimization/Mitigation
Relocation of Residents or Businesses	No Effect	The proposed project would result in approximately 87 residential and business relocations, including the relocation of many businesses within the Claxton Community along SR-170.[62]	As the design of the Build Alternative is refined, impacts to residential and business properties within the SR-170 socioeconomic study area may be reduced. Should a property be acquired, compensation would be at fair market value. TDOT would make relocation assistance available to all eligible persons impacted by this project, including residences, businesses, farm operations, non-profit organizations, and those requiring special services or assistance. The TDOT Regional Relocation Staff will administer the relocation program under the rules, policies, and procedures set forth in the Federal Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, as amended, the Uniform Relocation Assistance Act of 1972, implementing federal regulations, Tennessee Code Annotated 13-11-101 through 119, The State of Tennessee Relocation Assistance Brochure, and Chapter IX of the State of Tennessee Department of Transportation Right-of-Way Manual.[63] Additionally, if suitable replacement housing is not available in the immediate SR-170 socioeconomic study area, TDOT will work with individuals to identify alternate options, potentially including the construction of a new home. Both renters and mobile-home owners will also be compensated and will receive assistance from TDOT in the identification of, and relocation of their home to, a new location. Businesses subject to relocation under the Build Alternative will be compensated for their relocation to a new location

Impact Category	No Build Alternative Effect Determination	Build Alternative Effect Determination	Minimization/Mitigation
			including moving costs, incidentals, and the cost to reestablish the business in a new location. TDOT will provide advance notification of proposed ROW acquisition. The TDOT Right-of-Way Office has the responsibility, once a project is approved, of appraising, purchasing and, if required, assisting individuals, families or businesses in relocating. Before acquiring property, all properties are appraised based on comparable sales and land use values in the surrounding areas.
Community Services and Facilities	No Effect	The Build Alternative would impact five of 16 community facilities identified within or adjacent to the limits of the Build Alternative. Partial acquisition of ROW from several parks and recreational facilities would be needed, including Solway Park (0.99 acre), Haw Ridge Park (1.77 acres), Tennessee Centennial Golf Course (3.58 acres), Woodhaven Memorial Gardens (cemetery) (0.40 acre), and Melton Lake Greenway (713 linear feet).	Construction of the Build Alternative would be phased so that SR-170 would remain open throughout the duration of construction for the general public to access the identified community facilities.
Community Stability and Cohesion	No Effect	**Relocations:** The Build Alternative would result in potential relocations (33 single-family residences, 28 multi-family residences, 8 mobile-home residences, and 18 businesses [13 occupied storefronts]). The density and rural nature of the community following the relocation of residences and businesses as a result of the Build Alternative would be consistent with the existing nature of the community. **Community Facilities**: The Build Alternative would result in five community facilities being	As the design of the Build Alternative is refined, impacts to residential and businesses properties within the SR-170 socioeconomic study area may be reduced. Should a property be acquired, compensation would be at fair market value. TDOT will make relocation assistance available to all eligible persons impacted by this project, including residences, businesses, farm operations, non-profit organizations, and those requiring special services or assistance. The TDOT Regional Relocation Staff will administer the relocation program under the rules, policies, and procedures set forth in the Federal Uniform Relocation Assistance and Real Property

Impact Category	No Build Alternative Effect Determination	Build Alternative Effect Determination	Minimization/Mitigation
		impacted as a result of minor ROW/easement acquisition. No relocations of the impacted community facilities would occur. **Barriers:** The Build Alternative would be designed to avoid creating new physical barriers in the community by primarily consisting of widening the existing SR-170 roadway. Additionally, the proposed project would include bicycle and pedestrian facilities along the length of the project, which would enhance community stability and cohesion by creating multimodal connections from residential communities to recreational and commercial facilities along the corridor. **Community Stability and Cohesion Impact Summary** – The proposed Build Alternative would impact residents and businesses, due to the availability of sufficient housing stock, and available commercial space, the project would not be anticipated to affect the local economy. Of the potential commercial impacts, 25 percent are currently vacant, and would not affect active businesses. In addition, approximately 40 percent of the anticipated residential displacements would be from two buildings. Therefore, the project would not adversely destabilize the community. With the maintaining of existing community facilities and improvements in multimodal connectivity, community cohesion would be retained.	Acquisition Policies Act of 1970, as amended, the Uniform Relocation Assistance Act of 1972, implementing federal regulations, Tennessee Code Annotated 13-11-101 through 119, The State of Tennessee Relocation Assistance Brochure, and Chapter IX of the State of Tennessee Department of Transportation Right-of-Way Manual.[64] Additionally, if suitable replacement housing is not available in the immediate SR-170 socioeconomic study area, TDOT will work with individuals to identify alternate options, potentially including the construction of a new home. Both renters and mobile-home owners will also be compensated and will receive assistance from TDOT in the identification of, and relocation of their home to, a new location. Businesses subject to relocation under the Build Alternative will be compensated for their relocation to a new location including moving costs, incidentals, and the cost to reestablish the business in a new location. TDOT would provide advance notification of proposed right-of-way acquisition. The TDOT Right-of-Way Office has the responsibility, once a project is approved, of appraising, purchasing and, if required, assisting individuals, families or businesses in relocating. Before acquiring property, all properties are appraised based on comparable sales and land use values in the surrounding areas.

6. Economic Conditions

This section of the technical memorandum describes the existing economic conditions of Anderson County and the SR-170 project, including information on the labor force and commuting patterns, and discusses impacts to economic conditions anticipated to result from the No-Build and Build Alternatives.

6.1 Existing Economic Conditions

6.1.1 Anderson County Economic Status

Each year, the Appalachian Regional Commission (ARC) prepares an index of county economic status for the 423 counties located within the Appalachian Region of the United States. Economic status designations are identified through a composite measure of each county's three-year average unemployment rate, per capita market income,[65] and poverty rate. These indicator values are added and averaged to produce an index value for each county. Counties are then ranked and categorized as distressed, at-risk, transitional, competitive, or attainment based on their index value. Table 9 shows the classification descriptions for the County's economic status.[66]

Table 9: Economic Classification Descriptions

ARC County Economic Levels	
Distressed	Distressed counties are the most economically depressed counties. They rank in the worst 10% of the nation's counties.
At-Risk	At-Risk counties are at risk of becoming economically distressed. They rank between the worst 10% and the worst 25% of the nation's counties.
Transitional	Transitional counties are those transitioning between strong and weak economies. They make up the largest economic status designation. Transitional counties rank between the worst 25% and the best 25% of the nation's counties.
Competitive	Competitive counties are those that can compete in the national economy but are not in the highest 10% of the nation's counties. Counties ranking between the best 10% and the best 25% of the nation's counties are classified competitive.
Attainment	Attainment counties are the economically strongest counties. Counties ranking in the best 10% of the nation's counties are classified as attainment.

The county economic status for Anderson County is shown in Table 10 and Figure 4.

[65] Per capita market income, as defined by the ARC, is a measure of an area's total personal income, less transfer payments, divided by the resident population of the area. Transfer payments include retirement and disability insurance benefit payments, medical payments, income maintenance benefit payments, unemployment insurance benefit payments, veterans benefit payments, and other such payments.
[66] Appalachian Regional Council. Distressed Designation and County Economic Status Classification System. https://www.arc.gov/distressed-designation-and-county-economic-status-classification-system/

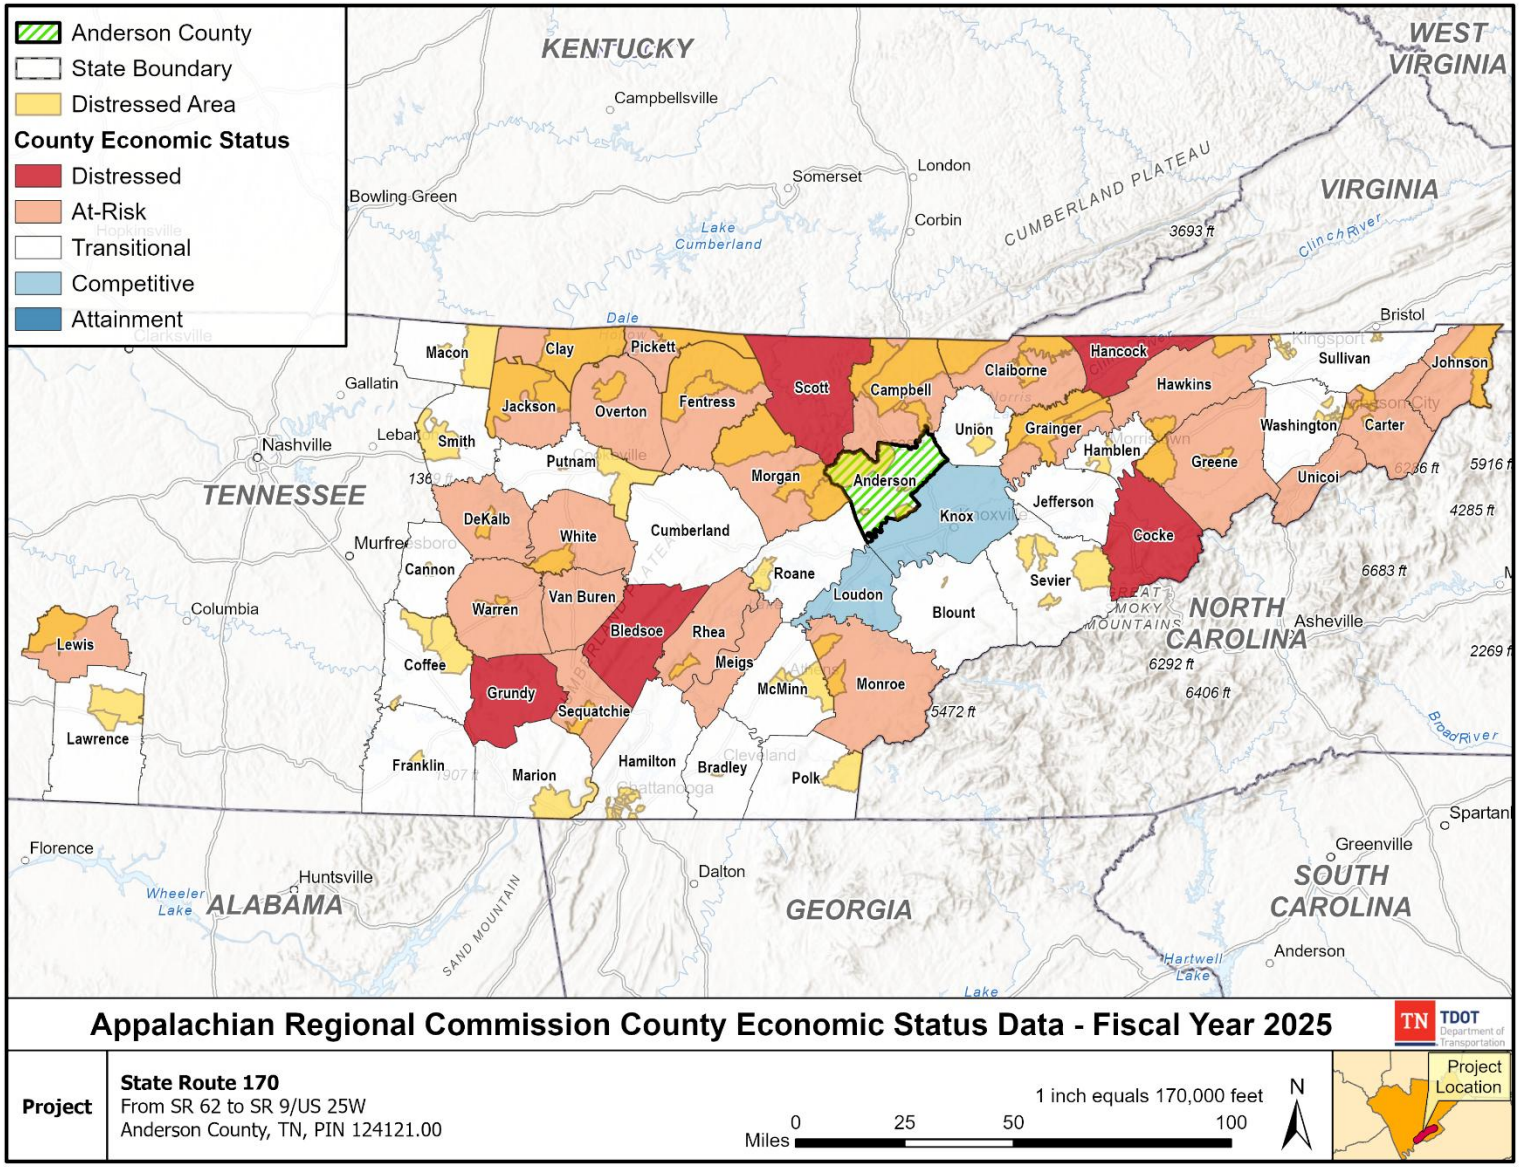
Table 10: Anderson County Economic Status[67]

Metric	Status
Economic Status	Transitional
Index Value Rank (Of 3,113 counties in the US, 1 is the best)	1,615
Per Capita Market Income, 2022	71.3%
Poverty Rate, 2018-2022	15.4%
Three-Year Average Unemployment Rate, 2018-2022	4.7%

Table 11: County Economic Status – Tennessee and Eastern Grand Division of Tennessee[68, 69]

Geographic Area	Total Counties	Attainment	Competitive	Transitional	At-Risk	Distressed
Tennessee	**95**	1	6	48	31	9
Eastern Grand Division of Tennessee	**33**	0	2	15	12	4

Figure 5: Appalachian Regional Commission County Economic Status Data – Fiscal Year 2025



6.1.2 Anderson County Labor Force

The current top three industries in the state and in Anderson County are shown in Table 12. Two of the three largest industries in terms of employment in Anderson County are the same as the state, with employment in the government sector in Anderson County replacing retail trade at the state level.

Table 12: Top Three Industries by State and County in 2022[70]

Geographic Area	Top Three Industries
Tennessee	• Health care and social assistance • Retail trade • Manufacturing
Anderson County	• Manufacturing • Government • Healthcare and Social Assistance

As shown in Table 13, for the years reviewed, unemployment rates in Tennessee and Anderson County followed similar trends. Both saw their highest rates of unemployment in 2010, after which unemployment trended steadily downward through 2024.

Table 13: Labor Force and Employment by State and County from 2005 to 2024[71]

Geographic Area	Year	Labor Force	Employed	Unemployed	Unemployment Rate
Tennessee	2024	3,420,373	3,303,023	117,350	3.4
	2019	3,329,437	3,218,077	111,360	3.3
	2014	3,052,572	2,852,672	199,900	6.5
	2010	3,094,834	2,791,618	303,216	9.8
	2005	2,899,846	2,740,356	159,490	5.5
Anderson County	2024	35,254	34,066	1,188	3.4
	2019	33,870	32,660	1,210	3.6
	2014	33,251	30,999	2,252	6.8
	2010	34,969	31,670	3,299	9.4
	2005	34,431	32,676	1,755	5.1

6.1.3 Commuting Patterns in Anderson County

Based on the most recent Tennessee Department of Labor (TDL) and Workforce Development commuter data available (see Table 14), a majority of the labor force that lives in Anderson County commutes outside of the county to work, largely traveling to Knox County.[72]

[70] Bureau of Economic Analysis. Regional Data: GDP and Personal Income. CAEMP Total Full-Time and Part-Time Employment by NAICS Industry. Last Updated November 16, 2023. See **Attachment E.1**.

[71] US Bureau of Labor Statistics. Local Area Unemployment Statistics. Accessed May 14, 2025. See **Attachment E.1**

[72] The Tennessee Department of Labor and Workforce Development County Commuter Data dashboard includes an option to filter by county, with outflow and inflow data broken down to include the number of persons commuting from Anderson County to each county in Tennessee, and the number of persons commuting from each county in Tennessee to Anderson County. Based on this data, the largest grouping of commuters *(approximately X persons in Year) travel from Anderson County to X County to work.* https://www.tn.gov/workforce/tennessee-economic-data-/commute-patterns/commuter-data-county.html *Accessed May 14, 2025.*

Table 14: 2019 and 2022 Commuting Patterns for Anderson County[73, 74]

Survey Date	Number of Persons who Live and Work in the Same County	Outflow (Number of Persons Who Live in the County and Commute to Another County to Work)	Inflow (Number of Persons Living Outside the County Commuting into the County to Work)
2019	12,496	19,553	34,160
2022	12,101	20,975	38,970

6.1.4 Investments Currently Planned or Under Development in Anderson County

The following investments are currently planned or under development in and around the SR-170 project area and have the potential to influence the labor force and the local economy:

Facility Developments

- The TVA Bull Run Fossil Plant is located to the south of and immediately adjacent to SR-170. The TVA Bull Run Fossil Plant was a coal-fired electric generating station that was retired on December 1, 2023. TVA has collaborated with Type One, an energy company, to convert the Bull Run facility into a nuclear energy research plant. The plant's design is currently undergoing review.[75, 76, 77]
- A uranium enrichment facility is expected to open in Oak Ridge in the early 2030s. Orano USA has purchased an approximately 900-acre site on the west side of Oak Ridge for the new facility. The project is expected to generate over 300 jobs.[78]
- The Oak Ridge National Laboratory research lab has rapidly expanded its workforce and budget over the past six years. It currently employs over 7,000 people and its funding from the U.S. Department of Energy (USDOE) Office of Science has grown. Many new research endeavors are underway, which could lead to new employment opportunities for members of the community.[79]

Economic Investments

- The Tennessee Department of Economic and Community Development (TNECD) has awarded three FastTrack grants to companies in Anderson County since 2017, including a $4.4 million dollar grant to the 3M Company in 2022. This grant is to support 3M's facility expansion in Clinton, which is northeast of the eastern terminus of the project. The expansion is estimated to create 585 new jobs.[80]

6.2 Economic Impacts

6.2.1 No-Build Alternative

The No-Build Alternative would leave the SR-170 project area as it currently exists, except for those modifications to the roadway network that have been programmed and approved for implementation, or for routine maintenance and safety upgrades of the existing roadway system as needed.

6.2.2 Build Alternative

Under the Build Alternative, approximately 18 commercial storefronts (13 actively occupied with businesses) would potentially be relocated as a result of the proposed project. These potential relocations may impact up to 50 employees.[81] However, these impacts are not considered to be adverse to the local economy or overall employment rates within Anderson County. Additionally, further development is planned for the facilities within and surrounding the project area, which would also be served by the improved SR-170.

Commuter data from the TDL and Workforce Development indicates that the majority of the labor force that lives in Anderson County commutes to another county to work. The Build Alternative would improve system linkage by creating a consistent typical section along SR-170 between the City of Oak Ridge and community of Claxton, improving commutes for employees living and working in the area. Additionally, the proposed widening of this section of SR-170 would allow for commuter vehicles to pass slower vehicles such as freight and recreational vehicles.

6.3 Minimization/Mitigation Measures to Address Impacts

The Build Alternative would not result in adverse economic impacts; therefore, no mitigation is proposed. Although approximately 18 commercial storefronts (13 actively occupied with businesses) would potentially be relocated as a result of the proposed project, compensation to each business would be provided at fair market value. TDOT will make relocation assistance available to all eligible persons impacted by this project. TDOT Regional Relocation Staff will administer the relocation program under the rules, policies, and procedures set forth in the Federal Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970.

TABLE NOTES	
	Note: For information on data collection, confidentiality protection, nonsampling error, subject definitions, and guidance on using the data, visit the 2020 Census Demographic and Housing Characteristics File (DHC) Technical Documentation webpage.
	To protect respondent confidentiality, data have undergone disclosure avoidance methods which add "statistical noise" - small, random additions or subtractions - to the data so that no one can reliably link the published data to a specific person or household. The Census Bureau encourages data users to aggregate small populations and geographies to improve accuracy and diminish implausible results.

TABLE NOTES	
	Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, the decennial census is the official source of population totals for April 1st of each decennial year. In between censuses, the Census Bureau's Population Estimates Program produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units and the group quarters population for states and counties.
	Information about the American Community Survey (ACS) can be found on the ACS website. Supporting documentation including code lists, subject definitions, data accuracy, and statistical testing, and a full list of ACS tables and table shells (without estimates) can be found on the Technical Documentation section of the ACS website. Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.
	Source: U.S. Census Bureau, 2019-2023 American Community Survey 5-Year Estimates
	ACS data generally reflect the geographic boundaries of legal and statistical areas as of January 1 of the estimate year. For more information, see Geography Boundaries by Year.
	Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.
	Users must consider potential differences in geographic boundaries, questionnaire content or coding, or other methodological issues when comparing ACS data from different years. Statistically significant differences shown in ACS Comparison Profiles, or in data users' own analysis, may be the result of these differences and thus might not necessarily reflect changes to the social, economic, housing, or demographic characteristics being compared. For more information, see Comparing ACS Data.
	The age dependency ratio is derived by dividing the combined under-18 and 65-and-over populations by the 18-to-64 population and multiplying by 100.

	The old-age dependency ratio is derived by dividing the population 65 and over by the 18-to-64 population and multiplying by 100.
	The child dependency ratio is derived by dividing the population under 18 by the 18-to-64 population and multiplying by 100.
	When information is missing or inconsistent, the Census Bureau logically assigns an acceptable value using the response to a related question or questions. If a logical assignment is not possible, data are filled using a statistical process called allocation, which uses a similar individual or household to provide a donor value. The "Allocated" section is the number of respondents who received an allocated value for a particular subject.
	Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on 2020 Census data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.
	Explanation of Symbols:- The estimate could not be computed because there were an insufficient number of sample observations. For a ratio of medians estimate, one or both of the median estimates falls in the lowest interval or highest interval of an open-ended distribution. For a 5-year median estimate, the margin of error associated with a median was larger than the median itself.N The estimate or margin of error cannot be displayed because there were an insufficient number of sample cases in the selected geographic area. (X) The estimate or margin of error is not applicable or not available.median- The median falls in the lowest interval of an open-ended distribution (for example "2,500-")median+ The median falls in the highest interval of an open-ended distribution (for example "250,000+").** The margin of error could not be computed because there were an insufficient number of sample observations.*** The margin of error could not be computed because the median falls in the lowest interval or highest interval of an open-ended distribution.***** A margin of error is not appropriate because the corresponding estimate is controlled to an independent population or housing estimate. Effectively, the corresponding estimate has no sampling error and the margin of error may be treated as zero.

TABLE NOTES	
	Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, the decennial census is the official source of population totals for April 1st of each decennial year. In between censuses, the Census Bureau's Population Estimates Program produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units and the group quarters population for states and counties.
	Information about the American Community Survey (ACS) can be found on the ACS website. Supporting documentation including code lists, subject definitions, data accuracy, and statistical testing, and a full list of ACS tables and table shells (without estimates) can be found on the Technical Documentation section of the ACS website. Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.
	Source: U.S. Census Bureau, 2019-2023 American Community Survey 5-Year Estimates
	ACS data generally reflect the geographic boundaries of legal and statistical areas as of January 1 of the estimate year. For more information, see Geography Boundaries by Year.
	Users must consider potential differences in geographic boundaries, questionnaire content or coding, or other methodological issues when comparing ACS data from different years. Statistically significant differences shown in ACS Comparison Profiles, or in data users' own analysis, may be the result of these differences and thus might not necessarily reflect changes to the social, economic, housing, or demographic characteristics being compared. For more information, see Comparing ACS Data.
	Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.
	Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on 2020 Census data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

	Explanation of Symbols:- The estimate could not be computed because there were an insufficient number of sample observations. For a ratio of medians estimate, one or both of the median estimates falls in the lowest interval or highest interval of an open-ended distribution. For a 5-year median estimate, the margin of error associated with a median was larger than the median itself.N The estimate or margin of error cannot be displayed because there were an insufficient number of sample cases in the selected geographic area. (X) The estimate or margin of error is not applicable or not available.median- The median falls in the lowest interval of an open-ended distribution (for example "2,500-")median+ The median falls in the highest interval of an open-ended distribution (for example "250,000+").** The margin of error could not be computed because there were an insufficient number of sample observations.*** The margin of error could not be computed because the median falls in the lowest interval or highest interval of an open-ended distribution.***** A margin of error is not appropriate because the corresponding estimate is controlled to an independent population or housing estimate. Effectively, the corresponding estimate has no sampling error and the margin of error may be treated as zero.

TABLE NOTES	
	Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, the decennial census is the official source of population totals for April 1st of each decennial year. In between censuses, the Census Bureau's Population Estimates Program produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units and the group quarters population for states and counties.
	Information about the American Community Survey (ACS) can be found on the ACS website. Supporting documentation including code lists, subject definitions, data accuracy, and statistical testing, and a full list of ACS tables and table shells (without estimates) can be found on the Technical Documentation section of the ACS website. Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.
	Source: U.S. Census Bureau, 2019-2023 American Community Survey 5-Year Estimates
	ACS data generally reflect the geographic boundaries of legal and statistical areas as of January 1 of the estimate year. For more information, see Geography Boundaries by Year.
	Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.
	Users must consider potential differences in geographic boundaries, questionnaire content or coding, or other methodological issues when comparing ACS data from different years. Statistically significant differences shown in ACS Comparison Profiles, or in data users' own analysis, may be the result of these differences and thus might not necessarily reflect changes to the social, economic, housing, or demographic characteristics being compared. For more information, see Comparing ACS Data.

	Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on 2020 Census data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.
	Explanation of Symbols:- The estimate could not be computed because there were an insufficient number of sample observations. For a ratio of medians estimate, one or both of the median estimates falls in the lowest interval or highest interval of an open-ended distribution. For a 5-year median estimate, the margin of error associated with a median was larger than the median itself.N The estimate or margin of error cannot be displayed because there were an insufficient number of sample cases in the selected geographic area. (X) The estimate or margin of error is not applicable or not available.median- The median falls in the lowest interval of an open-ended distribution (for example "2,500-")median+ The median falls in the highest interval of an open-ended distribution (for example "250,000+").** The margin of error could not be computed because there were an insufficient number of sample observations.*** The margin of error could not be computed because the median falls in the lowest interval or highest interval of an open-ended distribution.***** A margin of error is not appropriate because the corresponding estimate is controlled to an independent population or housing estimate. Effectively, the corresponding estimate has no sampling error and the margin of error may be treated as zero.

TABLE NOTES	
	Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, the decennial census is the official source of population totals for April 1st of each decennial year. In between censuses, the Census Bureau's Population Estimates Program produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units and the group quarters population for states and counties.
	Information about the American Community Survey (ACS) can be found on the ACS website. Supporting documentation including code lists, subject definitions, data accuracy, and statistical testing, and a full list of ACS tables and table shells (without estimates) can be found on the Technical Documentation section of the ACS website. Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.
	Source: U.S. Census Bureau, 2019-2023 American Community Survey 5-Year Estimates
	ACS data generally reflect the geographic boundaries of legal and statistical areas as of January 1 of the estimate year. For more information, see Geography Boundaries by Year.
	Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.
	Users must consider potential differences in geographic boundaries, questionnaire content or coding, or other methodological issues when comparing ACS data from different years. Statistically significant differences shown in ACS Comparison Profiles, or in data users' own analysis, may be the result of these differences and thus might not necessarily reflect changes to the social, economic, housing, or demographic characteristics being compared. For more information, see Comparing ACS Data.

	A "limited English speaking household" is one in which no member 14 years old and over (1) speaks only English or (2) speaks a non-English language and speaks English "very well." In other words, all members 14 years old and over have at least some difficulty with English. By definition, English-only households cannot belong to this group. Previous Census Bureau data products have referred to these households as "linguistically isolated" and "Households in which no one 14 and over speaks English only or speaks a language other than English at home and speaks English 'very well'." This table is directly comparable to tables from earlier years that used these labels.
	The household language assigned to the housing unit is the non-English language spoken by the first person with a non-English language in the following order: reference person, spouse, parent, sibling, child, grandchild, in-law, other relative, unmarried partner, housemate/roommate, roomer/boarder, foster child, or other nonrelative. If no member of the household age 5 and over speaks a language other than English at home then the household language is English only.
	Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on 2020 Census data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.
	Explanation of Symbols:- The estimate could not be computed because there were an insufficient number of sample observations. For a ratio of medians estimate, one or both of the median estimates falls in the lowest interval or highest interval of an open-ended distribution. For a 5-year median estimate, the margin of error associated with a median was larger than the median itself.N The estimate or margin of error cannot be displayed because there were an insufficient number of sample cases in the selected geographic area. (X) The estimate or margin of error is not applicable or not available.median- The median falls in the lowest interval of an open-ended distribution (for example "2,500-")median+ The median falls in the highest interval of an open-ended distribution (for example "250,000+").** The margin of error could not be computed because there were an insufficient number of sample observations.*** The margin of error could not be computed because the median falls in the lowest interval or highest interval of an open-ended distribution.***** A margin of error is not appropriate because the corresponding estimate is controlled to an independent population or housing estimate. Effectively, the corresponding estimate has no sampling error and the margin of error may be treated as zero.

Supporting documentation including code lists, subject definitions, data accuracy, and statistical testing, and a full list of ACS tables and table shells (without estimates) can be found on the Technical Documentation section of the ACS website. Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.
	Source: U.S. Census Bureau, 2019-2023 American Community Survey 5-Year Estimates
	ACS data generally reflect the geographic boundaries of legal and statistical areas as of January 1 of the estimate year. For more information, see Geography Boundaries by Year.
	Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.
	Users must consider potential differences in geographic boundaries, questionnaire content or coding, or other methodological issues when comparing ACS data from different years. Statistically significant differences shown in ACS Comparison Profiles, or in data users' own analysis, may be the result of these differences and thus might not necessarily reflect changes to the social, economic, housing, or demographic characteristics being compared. For more information, see Comparing ACS Data.

	Ancestry listed in this table refers to the total number of people who responded with a particular ancestry; for example, the estimate given for German represents the number of people who listed German as either their first or second ancestry. This table lists only the largest ancestry groups; see the Detailed Tables for more categories. Race and Hispanic origin groups are not included in this table because data for those groups come from the Race and Hispanic origin questions rather than the ancestry question (see Demographic Table).
	Data for year of entry of the native population reflect the year of entry into the U.S. by people who were born in Puerto Rico or U.S. Island Areas or born outside the U.S. to a U.S. citizen parent and who subsequently moved to the U.S.
	The category "with a broadband Internet subscription" refers to those who said "Yes" to at least one of the following types of Internet subscriptions: Broadband such as cable, fiber optic, or DSL; a cellular data plan; satellite; a fixed wireless subscription; or other non-dial up subscription types.
	An Internet "subscription" refers to a type of service that someone pays for to access the Internet such as a cellular data plan, broadband such as cable, fiber optic or DSL, or other type of service. This will normally refer to a service that someone is billed for directly for Internet alone or sometimes as part of a bundle.
	"With a computer" includes those who said "Yes" to at least one of the following types of computers: Desktop or laptop; smartphone; tablet or other portable wireless computer; or some other type of computer.
	Caution should be used when comparing data for computer and Internet use before and after 2016. Changes in 2016 to the questions involving the wording as well as the response options resulted in changed response patterns in the data. Most noticeable are increases in overall computer ownership or use, the total of Internet subscriptions, satellite subscriptions, and cellular data plans for a smartphone or other mobile device. For more detailed information about these changes, see the 2016 American Community Survey Content Test Report for Computer and Internet Use located at https://www.census.gov/library/working-papers/2017/acs/2017_Lewis_01.html or the user note regarding changes in the 2016 questions located at https://www.census.gov/programs-surveys/acs/technical-documentation/user-notes/2017-03.html.
	Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on 2020 Census data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.
	Explanation of Symbols:- The estimate could not be computed because there were an insufficient number of sample observations. For a ratio of medians estimate, one or both of the median estimates falls in the lowest interval or highest interval of an open-ended distribution. For a 5-year median estimate, the margin of error associated with a median was larger than the median itself.N The estimate or margin of error cannot be displayed because there were an insufficient number of sample cases in the selected geographic area. (X) The estimate or margin of error is not applicable or not available.median- The median falls in the lowest interval of an open-ended distribution (for example "2,500-")median+ The median falls in the highest interval of an open-ended distribution (for example "250,000+").** The margin of error could not be computed because there were an insufficient number of sample observations.*** The margin of error could not be computed because the median falls in the lowest interval or highest interval of an open-ended distribution.***** A margin of error is not appropriate because the corresponding estimate is controlled to an independent population or housing estimate. Effectively, the corresponding estimate has no sampling error and the margin of error may be treated as zero.

TABLE NOTES	
	Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, the decennial census is the official source of population totals for April 1st of each decennial year. In between censuses, the Census Bureau's Population Estimates Program produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units and the group quarters population for states and counties.
	Information about the American Community Survey (ACS) can be found on the ACS website. Supporting documentation including code lists, subject definitions, data accuracy, and statistical testing, and a full list of ACS tables and table shells (without estimates) can be found on the Technical Documentation section of the ACS website. Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.
	Source: U.S. Census Bureau, 2019-2023 American Community Survey 5-Year Estimates
	ACS data generally reflect the geographic boundaries of legal and statistical areas as of January 1 of the estimate year. For more information, see Geography Boundaries by Year.
	Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.
	Users must consider potential differences in geographic boundaries, questionnaire content or coding, or other methodological issues when comparing ACS data from different years. Statistically significant differences shown in ACS Comparison Profiles, or in data users' own analysis, may be the result of these differences and thus might not necessarily reflect changes to the social, economic, housing, or demographic characteristics being compared. For more information, see Comparing ACS Data.
	Households not paying cash rent are excluded from the calculation of median gross rent.

	Telephone service data are not available for certain geographic areas due to problems with data collection of this question that occurred in 2019. Both ACS 1-year and ACS 5-year files were affected. It may take several years in the ACS 5-year files until the estimates are available for the geographic areas affected.
	Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on 2020 Census data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.
	Explanation of Symbols:- The estimate could not be computed because there were an insufficient number of sample observations. For a ratio of medians estimate, one or both of the median estimates falls in the lowest interval or highest interval of an open-ended distribution. For a 5-year median estimate, the margin of error associated with a median was larger than the median itself.N The estimate or margin of error cannot be displayed because there were an insufficient number of sample cases in the selected geographic area. (X) The estimate or margin of error is not applicable or not available.median- The median falls in the lowest interval of an open-ended distribution (for example "2,500-")median+ The median falls in the highest interval of an open-ended distribution (for example "250,000+").** The margin of error could not be computed because there were an insufficient number of sample observations.*** The margin of error could not be computed because the median falls in the lowest interval or highest interval of an open-ended distribution.***** A margin of error is not appropriate because the corresponding estimate is controlled to an independent population or housing estimate. Effectively, the corresponding estimate has no sampling error and the margin of error may be treated as zero.

	Source: U.S. Census Bureau, 2019-2023 American Community Survey 5-Year Estimates
	ACS data generally reflect the geographic boundaries of legal and statistical areas as of January 1 of the estimate year. For more information, see Geography Boundaries by Year.
	Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.
	Users must consider potential differences in geographic boundaries, questionnaire content or coding, or other methodological issues when comparing ACS data from different years. Statistically significant differences shown in ACS Comparison Profiles, or in data users' own analysis, may be the result of these differences and thus might not necessarily reflect changes to the social, economic, housing, or demographic characteristics being compared. For more information, see Comparing ACS Data.

	Ancestry listed in this table refers to the total number of people who responded with a particular ancestry; for example, the estimate given for German represents the number of people who listed German as either their first or second ancestry. This table lists only the largest ancestry groups; see the Detailed Tables for more categories. Race and Hispanic origin groups are not included in this table because data for those groups come from the Race and Hispanic origin questions rather than the ancestry question (see Demographic Table).
	Data for year of entry of the native population reflect the year of entry into the U.S. by people who were born in Puerto Rico or U.S. Island Areas or born outside the U.S. to a U.S. citizen parent and who subsequently moved to the U.S.
	The category "with a broadband Internet subscription" refers to those who said "Yes" to at least one of the following types of Internet subscriptions: Broadband such as cable, fiber optic, or DSL; a cellular data plan; satellite; a fixed wireless subscription; or other non-dial up subscription types.
	An Internet "subscription" refers to a type of service that someone pays for to access the Internet such as a cellular data plan, broadband such as cable, fiber optic or DSL, or other type of service. This will normally refer to a service that someone is billed for directly for Internet alone or sometimes as part of a bundle.
	"With a computer" includes those who said "Yes" to at least one of the following types of computers: Desktop or laptop; smartphone; tablet or other portable wireless computer; or some other type of computer.
	Caution should be used when comparing data for computer and Internet use before and after 2016. Changes in 2016 to the questions involving the wording as well as the response options resulted in changed response patterns in the data. Most noticeable are increases in overall computer ownership or use, the total of Internet subscriptions, satellite subscriptions, and cellular data plans for a smartphone or other mobile device. For more detailed information about these changes, see the 2016 American Community Survey Content Test Report for Computer and Internet Use located at https://www.census.gov/library/working-papers/2017/acs/2017_Lewis_01.html or the user note regarding changes in the 2016 questions located at https://www.census.gov/programs-surveys/acs/technical-documentation/user-notes/2017-03.html.
	Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on 2020 Census data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.
	Explanation of Symbols:- The estimate could not be computed because there were an insufficient number of sample observations. County: Anderson
Route: SR-170
PIN: 124121.01 and 124121.02
State Project No.: 01024-0221-14 and 01024-0224-14
Federal Project No.: STP-170(13) and STP-170(16)

Termini:
124121.01: SR-170; From S.R. 62 (Oak Ridge Highway) to Near Melton Lake Drive.
124121.02: SR-170; From Near Melton Lake Drive to SR-9 (US-25W, Clinton Highway)

PROJECT INFORMATION: This Conceptual Stage Relocation Plan covers both 124121.01 and 124121.02, however all present relocations belong to the .02 PIN. To improve safety and functionality of the roadway, the Tennessee Department of Transportation (TDOT) is proposing to widen the roadway from two (2) to four (4) lanes with a median and/or center turn lanes, inclusion of pedestrian/bicycle facilities, and a new bridge over the Clinch River.

A map showing the location of the proposed project is provided on page 4 of this report.

According to the preliminary plans, typical sections will contain the following:

Typical sections of the roadway would include two 12 ft. travel lanes on either side, occasional 12 ft. center turning lanes, 8 ft. wide shoulders on each side and 12-18 ft. wide medians.

AREA INFORMATION: The subject area is in the Southeastern portion of Anderson County. Current land use in the project area is commercial and residential.

According to the U.S. Census Bureau, the population of Anderson County in 2020 was estimated to be 77,123, a 2.6 percent increase over the 2010 census.

DISPLACEMENTS:

Anticipated Relocations	
BUSINESS RELOCATIONS	18
MOBILE HOME RELOCATIONS	8
SINGLE FAMILY RELOCATIONS	33
MULTI-FAMILY RELOCATIONS	28

DISPLACEMENT EFFECTS AND ANALYSIS

Business: This project is projected to displace a total of Eighteen (18) businesses due to proposed R.O.W., easements and septic issues. The range of businesses affected include Retail, Automotive Repair, Services (Salon, Barber, etc.) , Small Industry and Entertainment. Approximately Fifty (50) jobs could be affected by these relocations.

Residential: This project is projected to displace a total of Sixty-Nine (69) residences. This includes Eight (8) Mobile Homes, Thirty-Three (33) Single-Family Residences, and Twenty-Eight (28) Multi-Family Residences, which includes a Condo building and a Quadplex. Not included in this count are Nine (9) vacant Tracts indicated on Sheet 5 of the plans set that are currently set to be developed into townhomes this year, according to the owner.

Availability of Replacement Housing: While the project itself is in a rural area, the proximity of cities of such as Oak Ridge, Clinton, and Knoxville, indicates

replacement housing does not appear to be an issue in regard to this project. There were 100+ suitable homes for sale and 100+ suitable homes for rent within 25 miles of the project area (37716) Via an internet search. Replacement locations for possible business relocations are sufficient with 23 locations for currently for lease in Anderson County.

ENVIRONMENTAL: While there are some possible relocations, it does not appear to be significantly environmentally impactful.

ECONOMIC IMPACT: The proposed project would possibly relocate Thirteen (13) businesses in the area. It does not appear that this project would negatively impact the economy of the area.

ASSURANCES: The Tennessee Department of Transportation will make relocation assistance available to all eligible persons impacted by this project, including residences, businesses, farm operations, non-profit organizations, and those requiring special services or assistance. The Regional Relocation Staff will administer the relocation program under the rules, policies, and procedures set forth in the Federal Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 as amended, the Uniform Relocation Assistance Act of 1972, implementing federal regulations, TCA 13-11-101 through 119, The State of Tennessee Relocation Assistance Brochure and Chapter IX of the State of Tennessee Department of Transportation Right-of-Way Manual. TDOT's relocation program is practical and will allow for the efficient relocation of all eligible displaced persons in accordance with State and Federal Guidelines.

TANGENT SECTION
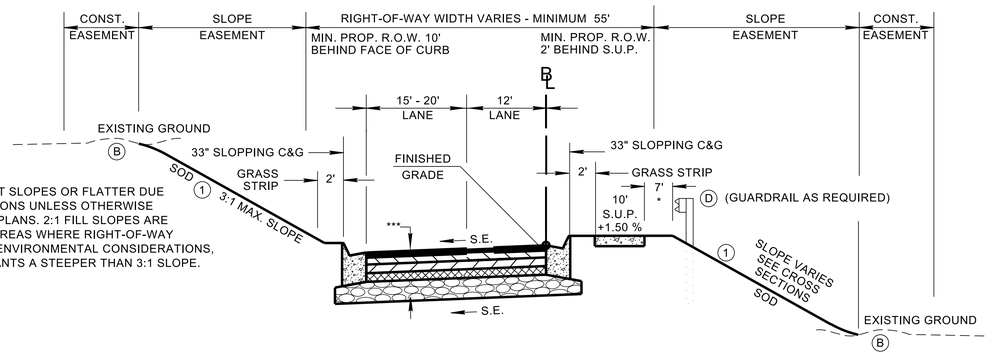
JUG HANDLE

(BASED ON STD. DWG. RD11-TS-4 & RD11-TS-6A)
FROM STA. 710+00.00 TO STA. 716+03.34

* BERM WIDTH VARIES IN SOME LOCATIONS TO MEET CLEAR ZONE CRITERIA AND AVOID GUARDRAIL.



1 3:1 MAXIMUM CUT SLOPES OR FLATTER DUE TO SOIL CONDITIONS UNLESS OTHERWISE SHOWN ON THE PLANS. 2:1 FILL SLOPES ARE APPLICABLE IN AREAS WHERE RIGHT-OF-WAY RESTRICTIONS, ENVIRONMENTAL CONSIDERATIONS, OR COST WARRANTS A STEEPER THAN 3:1 SLOPE.

SUPERELEVATED SECTION
JUG HANDLE

(BASED ON STD. DWG. RD11-TS-4 & RD11-TS-6A)
FROM STA. 716+03.34 TO STA. 720+49.93

* BERM WIDTH VARIES IN SOME LOCATIONS TO MEET CLEAR ZONE CRITERIA AND AVOID GUARDRAIL.

A THE SLOPE OF THE SHOULDER AND THE ROADWAY PAVEMENT SHALL NOT EXCEED AN ALGEBRAIC DIFFERENCE OF 7%.

B SEE STANDARD DRAWINGS RD11-S-11 AND RD11-S-11B FOR FILL AND CUT SLOPE TABLES, ROUNDING ON TOP OF CUT SLOPES AND TOE OF FILL SLOPES, SPECIAL ROCK TREATMENT AND SUB GRADE ROUNDING IF APPLICABLE.

C SEE STANDARD DRAWING RD11-S-11A FOR ROUNDING OF ROADSIDE DITCH SLOPES.

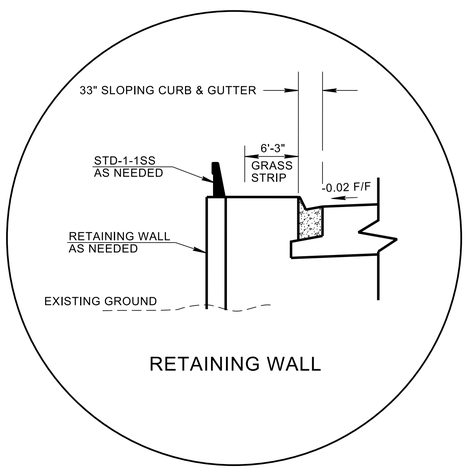
D SEE STANDARD DRAWING S-PL-6 FOR TYPICAL GUARDRAIL PLACEMENT.

B MAXIMUM 2(H):1(V) OR AS RECOMMENDED BY THE GEOTECHNICAL OFFICE. WHEN A 2(H):1(V) SLOPE IS USED, AND THE FILL HEIGHT EXCEEDS SIX FEET, GUARDRAIL SHOULD BE CONSIDERED. WHERE RIGHT-OF-WAY IS NOT AN ISSUE, STANDARD DRAWING RD11-S-11 (CASE II) SLOPES MAY BE USED.

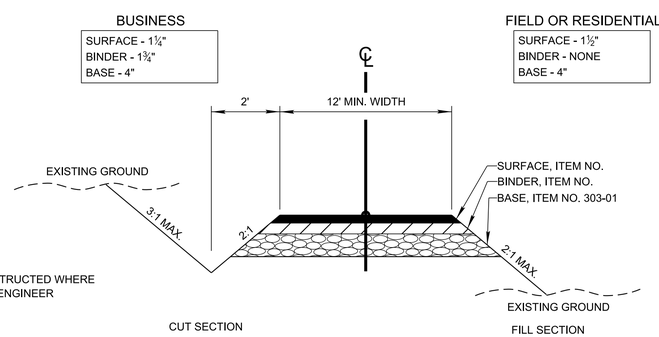
C SEE STANDARD DRAWING RD11-S-11A FOR ROUNDING OF ROADSIDE DITCH SLOPES.

D SEE STANDARD DRAWING S-PL-6 FOR TYPICAL GUARDRAIL PLACEMENT.

E SITE-SPECIFIC CONDITIONS AND ENGINEERING JUDGMENT OF THE DESIGNER SHOULD BE THE TWO PRIMARY DETERMINANTS OF THE APPROPRIATE CLEAR ZONE WIDTH FOR LOW-VOLUME LOCAL ROADS. AT LOCATIONS WHERE A CLEAR ZONE OF 6 FEET OR MORE IN WIDTH CAN BE PROVIDED AT LOW COST AND WITH MINIMUM SOCIAL/ENVIRONMENTAL IMPACT, SUCH CLEAR ZONE SHOULD BE CONSIDERED. WHERE PROVISION OF A CLEAR ZONE IS NOT PRACTICAL, NONE IS REQUIRED.



RETAINING WALL



NOTE: DITCH TO BE CONSTRUCTED WHERE DIRECTED BY THE ENGINEER

TYPICAL SECTION
PRIVATE DRIVE TO BUSINESS, FIELD, OR RESIDENTIAL PROPERTY

These tracts are currently undeveloped, but the developer talked to me during the CSRP onsite and said Tracts 198 and 201 were already permitted to start building townhouses and the rest of the tracts should follow the rest of the year. There could be additional potential residential relocations depending on when ROW for this project starts.

GAS LINE CONTINUES ALONG WEST SIDE OF MELTON LAKE DRIVE BUT COULD NOT BE FIELD LOCATED PER ORUD
