Environmental Study

Technical Section

Section: Multimodal

Study Results

Generally, this project accommodates pedestrians with 5' sidewalks and cyclists with 12' shoulders. Ultimate Alternative A better accommodates multimodal users across the project area, as there are shoulders or sidewalks throughout. However, given the predominantly rural characteristics of the area and lack of connecting multimodal infrastructure, the project is exempt from requiring such improvements across the total project area.

Commitments

Did the study of this project result in any environmental commitments?

No

Additional Information

Is there any additional information or material included with this study?

No

Certification

Responder: Matthew Cushing

Title: Transportation Program Monitor
