Project Goals

Replace aging bridge structures

Construct bridges and roadway to accommodate the future expansion of I-24 to three, 12 foot-wide travel lanes and 12 foot-wide inside and outside shoulders

Minimize delays and inconvenience to the surrounding communities

What is a Design-Build (DB) Project?

A Design-Build project brings designers and construction professionals together as one team from the start of the project. This collaborative approach can shorten project delivery, improve coordination, reduce risks, and provide greater efficiency while helping deliver a high-quality project that meets the community's transportation needs.
