

I-24 Southeast Choice Lanes

Project Overview

Tennessee's first proposed Choice Lanes project would construct new, optional Choice Lanes on I-24 between Nashville and Murfreesboro.

The proposed I-24 Southeast Choice Lanes project would address travel time reliability and regional connectivity issues along approximately 26 miles of I-24 by providing passenger vehicles and transit riders with an effective transportation alternative. Choice Lanes would provide another option for motorists to bypass congestion in exchange for a user fee and allow motorists to maintain consistent travel times.

What are Choice Lanes?

Choice Lanes use pricing to proactively manage demand and provide travel-time reliability. The proposed Choice Lanes would allow motorists to maintain consistent travel speeds even when the adjacent existing lanes are congested. While many motorists may choose to stay in the existing lanes, they would still enjoy the benefit of reduced congestion as other motorists move into the new, additional Choice Lanes.

Benefits

- Addresses unreliable trip times
- Provides more balance to quality of life due to less time spent in traffic
- Offers enhanced transit options as transit buses would be able to use the lanes
- Positively impacts the regional economy
- Improves air quality due to less idling because of reduced traffic congestion

DID YOU KNOW?

The proposed project would be **designed, built, financed, operated and maintained** by a private-sector partner through a Public-Private Partnership (P3), with initial funding provided by the Transportation Modernization Act. This approach would preserve critical funds to address congestion-related challenges in rural areas, like widening interstates to three lanes.

Current Status

TDOT hosted three Public Information Meetings in August 2024 with an open comment period from August 14 to September 19, 2024. Comments and questions from these meetings are summarized and a Public Information Meeting Summary, which is now available on the project website. TDOT continues to work on the project's Environmental Assessment and in early 2025, a Public Hearing will take place to share the recommended preferred alternative(s). Coordination with industry partners to procure the project is also ongoing.
