INSTRUCTIONAL BULLETIN NO. 08-04

**REGARDING NOTE AND PAYMENT FOR THE EPSC ITEMS USED DURING
CONSTRUCTION FOR FLOW DIVERSION**

Effective for the June 20, 2008 letting, the following note will be used on projects with multi-barrel culverts or bridge structures. The purpose of this note is to eliminate supplements and payment concerns for erosion prevention and sediment control items used during construction for flow diversion.

Any work within the stream channel area (e.g., for pier footing, rip-rap placement, multi-barrel culvert/bridge construction, etc.) shall be separated from flowing water or expected flow path and performed during low flow conditions. All items used within the stream channel area for diversion of flow (or expected flow), unless specified in the plans, shall not be paid for directly but shall be included in the cost of other items. This note excludes any items specified in the plans for the Temporary diversion channels, EC-STR-31 and Temporary Diversion Culverts, EC-STR-32 for single barrel culvert construction.

The above note shall be included in the special notes on all projects with proposed work within a stream channel area. The Structures Division will include a similar note in the structures plans for bridges.

This bulletin **voids** Instructional Bulletin 06-19.
