VERTICAL PANEL GENERAL NOTES

1. Spacing for vertical panels not in a pair should be a distance in feet approximately equal to two times the posted speed limit in miles per hour.
2. The maximum spacing in feet between panels in a pair should be approximately equal to two times the posted speed limit in miles per hour, but will not exceed one-half the maximum spacing for panels not in pairs.
3. For traffic moving to the left of the vertical panels, use sign VP-L.
4. If used for traffic in two directions, back to back panels shall be used.
5. The vertical panels are to be used for meals that are designated on plans for vertical panels per square foot.
