**Modified Stage 2 Objective 2: Clinical Decision Support**

**Objective:** Use clinical decision support to improve performance on high priority health conditions.

**Measure 1:** Implement five clinical decision support interventions related to four or more clinical quality measures at a relevant point in patient care for the entire EHR reporting period. Absent four clinical quality measures related to an EP's scope of practice or patient population, the clinical decision support interventions must be related to high-priority health conditions.

**Measure 2:** The EP has enabled and implemented the functionality for drug-drug and drug-allergy interaction checks for the entire EHR reporting period.

**Measure 2 Exclusion:**
Any EP who writes fewer than 100 medication orders during the EHR reporting period may exclude.

*Note: All EPS must successfully attest to measure 1. There is no exclusion for measure 1.*

**CMS Specification Sheet**

**TennCare Notes** – The CDS rules must relate to clinical quality measures of which four may be applicable to the EP’s scope of practice.

In PIPP, the first space is provided for EPs to record the name of the CDS rule. The second space is provided for EPs to record a brief explanation of how the CDS rule assists the EP in real time caring for his or her patients. The third space is provided for EPs to record any CQMs being used to monitor compliance or progress on their CDS rule.

If none of the CQMs are applicable to an EP’s scope of practice, the EP should implement CDS interventions that he or she believes will drive improvements in the delivery of care for the high-priority health conditions relevant to his or her patient population.

Additional Resources

Clinical Decision Support is not simply an alert, a notification or explicit care suggestions. It can encompass a variety of tools including, but not limited to:

- Computerized alerts and reminders for providers and patients
- Clinical guidelines
- Condition-specific order sets
- Focused patient data reports and summaries
- Diagnostic support
- Contextually relevant reference information
