Update on the HealthCare Safety Net Executive Summary

Tennessee's Health Care Safety Net provides primary care, behavioral health, case management and emergency dental services to uninsured adults age 19-64. This update is provided in response to Tennessee Code Annotated 68-1-123, which requires a report to the General Assembly regarding data relating to access to care and healthcare safety net adequacy related issues.

Safety Net providers serve individuals who are uninsured, low-income, and disproportionately poor. In many communities, these patients are a member of a racial, ethnic or cultural minority population, challenged with barriers to health access in association with transportation, health literacy, distance, or geographic location. These factors can contribute to delayed care or lack of preventive care, resulting in unmet health needs that ultimately contribute to health disparities unique to the medically underserved uninsured.

Funding for local health department clinics, safety net dental services, and case management services is provided by the Tennessee Department of Health (TDH). Federally qualified health centers are funded through TDH and through federal grants. Community and faith-based clinics receive funding from TDH as well as other non-state sources. Figure 1 shows the distribution of these various primary care clinics throughout Tennessee. In addition to these primary care services, behavioral health services are funded through the Department of Mental Health and Substance Abuse Services (DMHSAS).

In addition to these healthcare services, several insurance options are available for low-income Tennesseans:

- *CoverKids*—Serves children in families who do not qualify for TennCare but cannot afford private health coverage.
- *AccessTN*—Effective January 1, 2015, AccessTN members were transitioned to an off-Marketplace, individual health plan administered by BlueCross BlueShield of Tennessee.
- *CoverRx*—Pharmacy assistance program for low-income Tennesseans who do not have prescription drug coverage. This program provides a Covered Drug List of more than 200 generic medications, as well as brand name insulin and diabetic supplies.

During State Fiscal Year 2016 (July 1, 2015-June 30, 2016), Safety Net encounters included:

- 514,520 medical encounters, of which:
 - o 101,572 occurred in 40 Local Health Department (LHD) primary care clinics
 - o 41,121 occurred in 16 LHDs designated as Federally Qualified Health Centers (FQHCs)
 - 195,435 occurred in Community Health Centers (CHCs) designated as FQHCs (non-LHDs)
 - o 176,392 occurred in Community/Faith-Based Clinics
- 23,857 dental extractions through 21 dental providers
- 1,769 dental cleanings and counseling sessions (a newly-offered service)
- Care coordination for 10,916 uninsured Tennesseans resulting in 64,383 encounter visits
- 29,872 individuals receiving behavioral health services through 15 community mental health agencies

Encounter data for FY15 and FY16 are summarized in Figure 2. In State FY16, there was a 4% reduction in the number of medical encounters compared to FY15. This decline in the number of encounters is likely multifactorial, and may be associated with effective patient management in primary care medical homes as well as the availability of insurance coverage options through the Affordable Care Act.

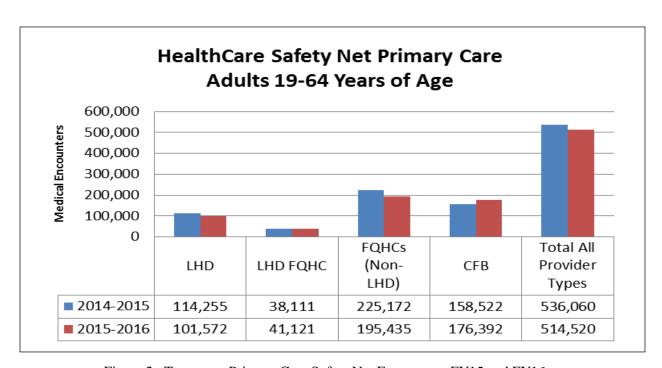

Figure 2. Tennessee Primary Care Safety Net Encounters, FY15 and FY16

I. INTRODUCTION

This report is provided in response to Tennessee Code Annotated 68-1-123, which requires the Commissioner of Health, in consultation with the Department of Finance and Administration and any other State agencies involved in the administration of the HealthCare Safety Net Program to provide a report to the General Assembly regarding data relating to access to care and healthcare safety net adequacy related issues. The report addresses the allocation of scarce healthcare resources with attention to assuring a safety net for access to health services that are part of community systems of care in rural and underserved areas across the State. The report describes safety net activities for State Fiscal Year 2016 (July 1, 2015-June 30, 2016).

Safety-Net Patient Population Characteristics & Demographics

Tennessee's Health Care Safety Net provides primary care, behavioral health, case management and emergency dental services to uninsured adults age 19-64. In 2016, the statewide uninsured rate of adults in Tennessee is estimated at 6.6 percent, according to "The Impact of TennCare: A Survey of Recipients, 2016", a report released by the UT Knoxville Boyd Center for Business Economic Research. The Safety-Net patient population is comprised of medically underserved, uninsured low-income adults, confronted with barriers to health access associated with health literacy, language, culture, transportation, geography and others unique to those of racial, ethnic or cultural minority patient populations.

Age and Gender

Table 1 shows patient utilization reported by Safety-Net provider type as the percentage of uninsured Adult Safety Net patient visits of the total patient population, stratified by age range and gender.

Table 1: 2016 Safety Net Patient Utilization by Age, Gender and Provider Type

Age 55-64	22%	27%	24%			
Female	58%	57%	60%			
Male	42%	43%	40%			

Data source: Grantee quarterly reports

Health Status

Safety Net providers assess their patient population for a variety of health behaviors, including those that directly influence the top ten leading causes of death in Tennessee as well as other population health conditions, such as heart disease, cancer, and diabetes. Safety net providers collaborate with their local health departments and other community partners to focus on primary "upstream" prevention strategies to prevent chronic disease before it ever happens and to improve the health of the population. Table 2 shows the percentage of safety net patients (by clinic type) exhibiting various health behaviors or risk factors, and Table 3 shows the percentage of safety net patients with specific conditions related to health behaviors or risk factors.

Table 2: Health Behaviors and Risk Factors Among Safety Net Patients, FY16

Health Access

As shown in Figure 1, Primary Care Safety Net Sites are located in 87 of 95 counties to assure health access for Tennessee's uninsured adults. In FY16, a \$13.5 million State appropriation was used to support services provided by 99 Community Health Center sites, commonly referred to as Federally Qualified Health Centers (FQHCs), 68 Community Faith-Based Clinics (CFB), including adult emergency dental care locations, and 4 Project ACCESS model organizations.

Underserved Areas

Having health insurance alone does not assure that an individual will have access to health care. Without proximal access to providers and health care facilities, even the most robust insurance may not be useful. At the federal level, the Health Resources Services Administration (HRSA) designates units of limited access to health care providers as medically underserved areas (MUAs), medically underserved populations (MUPs), and health professional shortage areas (HPSAs). MUAs and MUPs identify Geographic areas and populations with a lack of access to primary care services. HPSAs are federally designated counties, parts of counties (such as census tracts), or public facilities that have been recognized as meeting or exceeding the standards of need for certain services. Several HPSA designations exist:

- **Geographic**: the population to physician ratio is greater than 3,500:1.
- **Population**: a segment of the population experiencing barriers to care and a population to physician ratio that is greater than 3,000:1.
- Facility: a public or private nonprofit medical facility is providing primary medical care services to an area or population group designated as having a shortage of primary care professional(s), and the facility has insufficient capacity to meet the primary care needs of that area or population group. A community health center or homeless clinic is an example of such a designation.

Access to care is an important social determinant of health. Safety Net providers located in underserved areas enhance health access to alleviate barriers to care in underserved communities. As shown in Attachments 1 and 2, all ninety-five counties in Tennessee have some type of shortage designation for primary care, dental and/or mental health services. The Health Care Safety Net, as described in this report, fills gaps for some of Tennessee's most underserved, at-risk adults—those who are uninsured and who might otherwise forego care altogether or suffer unnecessarily from preventable or treatable conditions attributed to disparities in access to health care.

II. ACCESS TO CARE AND ARRAY OF SERVICES

A. Public Health Primary Care Safety Net Expansion

To address issues of access and care for the uninsured, particularly in those areas designated as underserved areas, safety net primary care services are available in Tennessee through multiple venues. These include:

- Local Health Departments (LHDs) offering primary care (non-FQHCs)
- Local Health Departments that have been designated as FQHCs
- Community Health Centers (CHCs) designated as Federally Qualified Health Centers (FQHCs)
- Community/Faith-Based (CFB) Clinics

In FY16, these venues provided 514,520 medical encounters for uninsured Tennesseans ages 19-64 (see Table 4).

Table 4: HealthCare Safety Net Medical Encounters by Provider Type FY2008 – FY2016

Provider Type	FY 2008	FY 2009	FY 2010	FY 2011	FY2012	FY2013	FY2014	FY2015	FY2016
Local Health Department	135,922	159,384	158,709	147,463	140,140	129,241	120,328	114,255	101,572
Local Health Department designated as FQHC	43,350	49,070	51,555	50,433	46,940	44,030	40,940	38,111	41,121
Community Health Center (FQHC Non- LHD)	198,387	231,334	245,387	243,994	259,396	288,508	278,845	225,172	195,435
Community and Faith Based	185,500	162,141	172,656	184,678	199,586	186,680	216,533	158,522	176,392
Total	563,159	601,929	628,307	626,568	646,062	519,218	656,646	536,060	514,520

Data source: Grantee Quarterly Reports

Funding for primary care offered through Local Health Departments is included in the TDH budget. Those Local Health Departments that are designated as FQHCs have successfully competed for federal funding to augment primary care services provided in their counties.

The General Assembly also appropriates funding for safety net primary care services through community-based FQHCs also referred to as Community Health Centers or CHCs (separate from those Local Health Departments designated as FQHCs) and Community/Faith-Based (CFBs) clinics. The total state funded appropriation for these clinics is divided evenly between the FQHCs and the Community/Faith-Based clinics. TDH prioritizes distribution of Community/Faith-Based clinic funding to MUAs, MUPs, and HPSAs. In addition to direct clinical services, safety net funds support care coordination efforts through Project Access.

1. Statewide Expansion of the Capacity of Local Health Departments

On January 1, 2006, the Tennessee Department of Health (TDH) initiated a statewide expansion of primary care services to uninsured adult Tennesseans in the following ways: (1) increasing access for acute and episodic care and chronic disease management; and (2) offering the "best care possible" via preventive physical exams and essential health screenings. These strategies assist in individual preventive health maintenance, which in turn aids in reducing unnecessary hospitalizations. Prior to the safety net statewide expansion of primary care services on January 1, 2006, Local Health Departments in 17 counties across the state provided primary care in a total of 20 sites.

At present, primary care services are provided in 56 Local Health Department (LHD) sites in 50 of Tennessee's 95 counties. In 16 of these counties, the Local Health Departments have been designated as Federally Qualified Health Centers (FQHCs).

In conjunction with primary care services, LHDs offer prescription medications, including generic drugs, priority drug groups, patient drug assistance programs and referral for specialty care when necessary. For example, some Local Health Departments have partnered and continue to partner with local hospitals to offer discounted diagnostic services or a limited amount of diagnostics at no charge for uninsured adult health department patients.

Some local hospitals have allowed the health department online access to emergency room records for shared patients. This promotes better continuity of care for patients managed in TDH Primary Care Clinics. This option is limited to local hospitals that have a very close relationship with the Local Health Department in their area. Finally, in addition to expanded primary care services at many Local Health Departments, all health departments continue to provide traditional public health services such as Family Planning, Communicable Disease Surveillance and Management, Breast and Cervical Cancer Screening, Immunizations, and Women, Infants, and Children (WIC) services.

In FY16, forty LHD sites provided approximately 101,572 medical encounters to uninsured, adult Tennesseans 19 to 64 years of age, a decrease of 12,683 encounters from those recorded in FY15 (114,255). The FY16 medical encounter data for these LHD sites are shown in Table 5. These encounter data do not include the 16 LHDs that are designated FQHCs.

Table 5: Non-FQHC Local Health Department Primary Care Clinics

Non-FQHC Local Health Department Primary Care Clinics				
Primary Care Age Groups	Uninsured Adult Encounters FY16			
19-20 Years	1,991			
21-24 Years	5,831			
25-29 Years	8,624

2. State Funded Expansion of the Capacity of FQHCs, FQHC Look-A-Likes & LHD FQHCs

In FY07, State funding was made available to 23 provider organizations (with 84 clinical sites) designated as FQHCs (Federally Qualified Health Centers), a Medicare and Medicaid reimbursement designation for organizations that offer a broad range of primary care and prevention services. These included Community Health Center Organizations (CHCs) that receive United States Public Health Service Section 330 Grant Funding. Collectively, these entities provided services in 41 of Tennessee's 95 counties. In FY07, these sites provided 217,673 medical encounters to uninsured adults.

In FY16, there were 29 Community Health Center FQHCs and one FQHC "look-alike" with just under 200 delivery sites across the state. Delivery sites include primary care, dental, and other miscellaneous service delivery sites such as school-based health centers and homeless clinics. These sites provided 195,435 medical encounters in FY16, representing a 13% decrease from FY15.

Figure 3 shows the trend for FQHC (non-LHD) safety net funding, as well as, the FY08-FY16 trend of medical encounters. In addition, 16 Local Health Departments (LHDs) designated as FQHCs provided 41,121 medical encounters in FY16, a 7% increase from FY 15 (see Table 4).

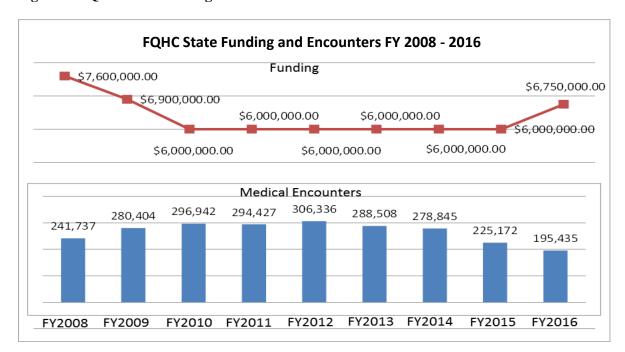

Figure 3: FQHC State Funding and Encounters FY 2008 – FY 2016

Note - Prior to 2013 both Non Local Health Department & Local Health Department FQHC encounters were counted together, that was changed in FY 13 in order to measure Local Health Department & Non Local Health Department encounters separately. FY 2013-2015 only reflects Non Local Health Department FQHC encounters.

These private, nonprofit, community-directed health care facilities provide high-quality, costeffective and comprehensive primary and preventive care to medically underserved and uninsured Tennesseans. In 2015 FQHCs and FQHC "look-alikes" in Tennessee provided care to over 384,000 patients. According to the Tennessee Primary Care Association (TPCA), on average approximately 35% of Community Health Center patients are uninsured; however, that number may be as high as 60% for some centers. Approximately 83% of FQHC patients have income levels below 100% of the Federal Poverty Level. Historically, Community Health Centers participated in the Health Disparities Collaborative, a national effort to improve health outcomes for all medically underserved people with chronic diseases, such as diabetes, cardiovascular disease, depression and asthma. This initiative prepared Community Health Centers to begin transforming their practices into Patient Centered Medical Homes (PCMHs). The PCMH is a "way of organizing primary care that emphasizes care coordination and communication to transform primary care into 'what patients want it to be'. Medical homes can lead to higher quality and lower costs, and can improve patients' and providers' experience of care." (National Committee for Quality Assurance, NCQA). Health centers in Tennessee are working on PCMH Recognition through the NCQA or Primary Care Medical Home Certification through The Joint Commission (TJC). The first Tennessee health center achieved PCMH Certification in March 2013. Through September 2016, 16 FQHCs have achieved PCMH recognition (NCQA) or certification (TJC) at 61 sites.

These centers are also working hard to improve clinical quality. The Center for Quality in Community Health is a network of Community Health Centers and partners that supports a continually evolving health care system by sharing information and expertise to facilitate learning, support quality improvement and develop leadership. Through the use of timely, relevant data, the Center for Quality in Community Health promotes collaboration, sustainability, cost effectiveness and healthier communities in Tennessee.

With the exception of three centers, all Tennessee community health centers now have an electronic health record and will continue working towards achieving federal meaningful use criteria. Community Health Centers are consistently providing the recommended standards of care for chronic health conditions, which should result in improved health outcomes for participants. In addition, all Community Health Centers are eligible and may participate in the federal 340B Drug Pricing Program, which provides significant savings on pharmaceuticals for their patients.

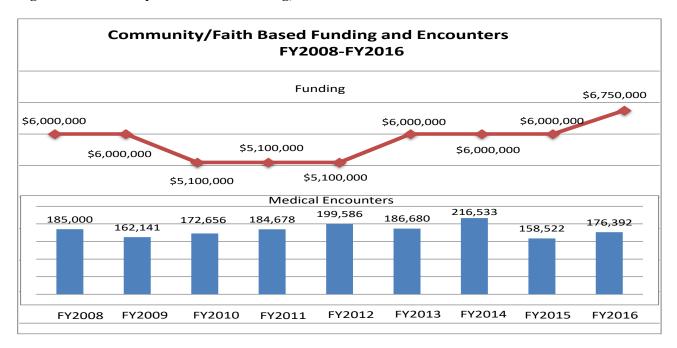

Many Tennessee Community Health Centers are using the advanced technology of telehealth to improve patient access to primary and specialty care. Telehealth uses electronic information and telecommunications technologies to support long-distance clinical health care, patient and professional health-related education, public health and health administration. Nationwide studies have found that telehealth can reduce the cost of health care, reduce travel times, and result in better management of chronic diseases. Additionally, some Community Health Centers are using telehealth to provide care to students in public schools. The use of telehealth in schools can reduce student absenteeism, reduce the amount of work missed by parents to transport children to physicians' offices, and improve school nursing staffing.

3. Statewide Expansion of the Capacity of Selected Faith-Based, Community-Based Rural Health, and Federally Funded Centers

Since the program's inception, the Department of Health has accepted applications and awarded safety net grant funding to providers of primary care services among faith-based, community-based, rural health, and other federally funded centers. These sites provide a primary care medical home to uninsured adults for treating health conditions including hypertension, diabetes, hyperlipidemia, allergies, and asthma. In addition, laboratory services, pharmacy services and referrals to specialty care are provided.

Figure 4 shows trends for both the annual amount of funding appropriated by the General Assembly, as well as the number of uninsured adult medical encounters from fiscal years 2008 to 2016. From 2014 through 2016 patient encounter numbers have fluctuated. Although it is difficult to determine the reasons for the variances in the number of encounters from year to year, the fluctuations may be attributable to better access to care management which directs uninsured patients to a patient centered medical home at Community Faith Based agencies or the impact of the Affordable Care Act. Despite now having insurance, some patients may continue to rely upon Safety Net support due to unaffordable insurance premiums or out-of-pocket expenses, co-pays, deductibles and care not covered by medical insurance.

Figure 4: Community/Faith-Based Funding, FY 2008 - FY 2016

In addition to sites providing direct clinical services, state funding is also provided to Project Access networks. These organizations do not deliver primary care services but instead offer essential care coordination services for uninsured adults in metropolitan areas and provide referrals to primary care medical homes, specialty care services, and diagnostic services. Diagnostic services provided at either a medical home or by a specialist can in many cases prevent costly hospital emergency room visits. Agencies that received funding in FY16 were: Nashville Academy of Medicine, Appalachian Mountain Project Access (AMPA), Hamilton County Project Access, and Knox County Project Access.

The Project Access Nashville network (formerly Bridges to Care network) is operated by the Nashville Academy of Medicine. The network is comprised of nine hospitals, seven federally subsidized primary care clinics, 10 faith-based public and private hospital sponsored primary care clinics, four dental clinics, four mental health centers, and three alcohol and drug treatment centers. Uninsured adults who are enrolled in Project Access Nashville and are at 200% or below poverty level have access by referral to approximately 1,155 volunteer physician specialists through the Project Access Nashville-Specialty Care Program. In FY16, the Nashville Academy of Medicine provided 4,302 care coordination encounters for patients. This resulted in coordinated services for 1,368 specialty care encounters with physicians and 242 hospital encounters. The cumulative reported value of coordinated care through FY 2016 is \$2,419,411.

Appalachian Mountain Project Access (AMPA) has a network of approximately 500 primary care physicians and physician extender volunteers, and provided 1,500 medical visits for uninsured adults during F Y 1 6. Donated medical services have surpassed \$50 million in cumulative donated care since AMPA opened in late 2007.

The Hamilton County Project Access network is comprised of more than 900 physician and physician extender volunteers, and coordinated services for 24,062 medical encounters in FY16. Donated medical services have surpassed over \$147 million since the program began in April 2004, including more than \$13 million in services in FY16.

Knox County Project Access is comprised of 1,472 physicians and physician extender volunteer providers and coordinated services for 40,726 medical encounters in FY16. Donated medical services have surpassed over \$180 million since the program began in 2006.

In 2015 collaboration was established between the Department of Health's Safety Net Program and the Tennessee Charitable Care Network (TCCN). TCCN, granted incorporation as a 501c3 nonprofit charitable organization in 2014, was founded to provide a collective voice for charitable clinics across the state, with a mission to tackle shared challenges in the lack of access to health care and to advocate for the establishment of non-profit charitable clinics to provide free or reduced cost medical, dental, and mental health care services for low-income, uninsured, and underserved populations. In 2015 TCCN member clinics served 36,333 patients with 75,685 medical encounters, 8,927 behavioral health encounters and 20,862 dental encounters. Services include Primary Care, Specialty Care, Preventive Dental, Dental Extractions, Restorative Dental, Spiritual Counseling, Mental Health, Substance Abuse, Vision, Diagnostic, Pharmaceutical Assistance, and Wellness Programs. In collaboration with The Tennessee Department of Health, the Tennessee Charitable Care Network member clinics help uninsured patients access over \$9.5 million in medications annually.

Charitable clinics are making a difference in the lives of Tennesseans across the state by providing consistent, culturally-sensitive, primary care, and by minimizing inappropriate and costly utilization of emergency room services and other hospital resources. Volunteers are at the heart of charitable clinic services. More than 1,100 providers and 2,000 other volunteers give approximately 66,000 hours annually to help charitable clinics meet their mission of serving the uninsured.

A major accomplishment for the Community/Faith Based providers includes the expansion of the emergency dental service program to include prophylactic dental cleanings. Following a successful dental prophylaxis pilot conducted in FY 14, funding was allocated in FY 16 to Community/Faith Based dental providers to include dental cleanings as a part of the patient's oral health treatment plan. Regular cleanings decrease the risk of caries and gingivitis which, if left untreated, can lead to the loss of permanent teeth. Early intervention to mitigate the risk of dental disease is now available as an oral health care primary prevention service.

4. Access to Statewide Dental Services

Safety Net legislation and funding were intended to enable provision of primary care to TennCare disenrollees and was not intended to exceed the level of previous benefits (e.g., TennCare does not cover adult dental services). However, access to dental services, particularly emergency extractions, was identified as an important service that Safety Net funding could support. TDH provides support and operates preventive dental and adult dental services programs with supplemental funding from county governments, community partnerships, and other public and private agencies and organizations, many on a part-time basis.

TDH offers dental services in 50 counties through 49 Local Health Departments and one regional public health office. During FY16, 44 of the 50 dental clinics were staffed and open one to five days per week. The remaining six clinics were closed due to lack of available staff. All staffed clinics provided emergency dental care for adults in fiscal year 2016.

Expanded Oral Health Care Workforce & Dental Services in Local Health Departments

Three of the Health Department dental clinics offer expanded services for a targeted adult population: the West Tennessee Regional Office Dental Clinic, the Maury County Health Department and Montgomery County Health Department. Fourth year dental students from the University of Tennessee Health Sciences Center and Meharry Medical College School of Dentistry rotate through these facilities providing care to the underserved.

Metropolitan Health Department Oral Health Services

Emergency dental and oral health care varies at each metro facility. Both Hamilton and Knox County provide emergency dental services to uninsured and underinsured adults ages nineteen (19) to sixty-four (64) at their health departments.

The Metro Public Health Department in Davidson County provides adult emergency dental services at the Lentz Public Health Center and also coordinates services with the Matthew Walker Comprehensive Care Clinic to access additional adult emergency dental care.

The Shelby County Health Department provides comprehensive dental services to patients less than twenty-one (21) years of age and adult emergency dental services. Adults seeking non-emergency dental services are referred to full service dental clinics in the community.

The Jackson-Madison County and Sullivan County Health Departments do not currently provide dental services.

In addition to services provided through Local Health Departments, TDH began funding community-based dental services for uninsured adults ages 19-64 in FY08. In FY16, twenty-one sites were awarded grants from TDH. These sites reported performing 23,857 extractions. A program expansion for hygienic cleaning and oral hygiene counseling was fully implemented for all dental grantees over a 6 month period resulting in 1,779 patient cleanings and counseling sessions in FY16. This expansion will be fully implemented in FY 17.

Figure 5 shows the trend for safety net dental providers and extractions since FY08.

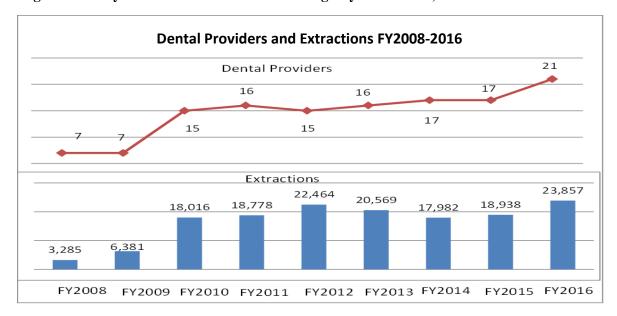

Figure 5: Safety Net Dental Providers and Emergency Extractions, FY 2008 – 2016

B. Behavioral Health Safety Net of Tennessee

1. Program Background and Overview

In response to Tennessee Public Chapter No. 474 and Section 59 of the Tennessee Appropriations Act of 2005, the former Tennessee Department of Mental Health and Developmental Disabilities (TDMHDD), currently referred to as the Tennessee Department of Mental Health and Substance Abuse Services (TDMHSAS), created the Mental Health Safety Net (MHSN) to provide essential mental health services to the twenty one thousand (21,000) individuals identified as severely and /or persistently mentally ill (SPMI/SMI) of the one hundred ninety-one thousand (191,000) individuals who were dis-enrolled from the TennCare Program due to TennCare Reform.

In FY 09, the MHSN and State Only program, the former out-patient portion of TennCare Partners initiative, were merged into a single program. This combined program was named the Behavioral Health Safety Net of Tennessee (BHSN of TN) and served the State Only out-patient population, as well as the original MHSN population. At this time, the BHSN of TN became eligibility-based, and opened enrollment to all Tennesseans who met the eligibility criteria. To facilitate the implementation of the BHSN of TN with its expanded enrollment base, an additional \$10 million was appropriated. There is no federal financial participation for BHSN of TN service recipients. The ability of TDMHSAS to cover services is dependent on annual appropriations by the legislature.

As of September 1, 2013, individuals who have Medicare Part B, and meet all other eligibility requirements for the BHSN of TN may be enrolled. They are eligible only for the four (4) approved services: Case Management, Medication Training and Support, Peer Support and Psychosocial Rehabilitation Services.

During FY16, the BHSN of TN partnered with 15 Community Mental Health Agencies that provided vital behavioral health services to approximately twenty nine thousand eight hundred and 29,872 individuals across the state of Tennessee. The top services utilized were: Case Management; Psychosocial Rehabilitation (group); Individual Therapy and Office Visits for Evaluation and Management.

The BHSN of TN continues to provide services including assessment, evaluation, diagnostic, therapeutic intervention, case management, peer support services, psychosocial rehabilitation services, office visits for evaluation and management, labs related to medication management, and pharmacy assistance and coordination.

C. Special Population

1. Ryan White Part B Funds

The General Assembly has appropriated \$7.2 million of recurring state funding to assist the Department of Health with providing HIV treatment for former TennCare clients and a growing population of uninsured low income clients. Initial safety net funding began in 2006 with an allocation of \$1.2M. These funds have enabled the Department to provide health care services to almost 7,000 clients who received Ryan White Part B services. These funds, along with drug company rebates in 2015, have allowed the Department to continue serving all eligible individuals in a continuously growing State Aids Drug Assistance Program (ADAP) with critical HIV medications and outpatient medical services through the HIV Centers of Excellence network of providers. In FY16, the network served 4,981 unduplicated clients through the Insurance Assistance Program (IAP) and 2,442 unduplicated clients through the HIV Drug Assistance Program (HDAP) (see Figure 6). The Centers of Excellence clinics consist of a coordinated network of clinics and private practitioners across the State, which provides a comprehensive approach to AIDS and HIV therapy at thirteen locations including five health departments. Life-saving

treatment is provided to some of the State's most vulnerable residents; many would go without treatment and care if State funds were unavailable to supplement federal funds for the program.

Figure 6 below shows the enrollment in the Ryan White Part B HIV Drug Assistance Program (HDAP) and Insurance Assistance Program (IAP) over the past 10 years.

Table 6: AIDS Drug Assistance Program (ADAP) Growth

Federal Fiscal Year	HDAP		IAP		Total	
	Enrollment	% Growth	Enrollment	% Growth	Enrollment	% Growth
2007 - 08	1,933	n/a	1,4381	n/a	3,371	n/a
2008 - 09	2,308	19%	1,356 ²	-6%	3,664	9%
2009 – 10	2,673	16%	1,6333	20%	4,306	18%
2010–11	3,172	19%	1,647 ³	<1%	4,819	12%
2011 – 12	3,530	11%	1,744 ³	6%	5,274	9%
2012 – 13	3,6624	4%	1,863 ³	7%	5,5254	5%

2015 – 16	2,442	-26%	4,981	25%	7,423	<1%

Data from CAREWare (East & Southeast) and IAP vendor (West, Southwest & Middle)

D. Insurance Options for the Uninsured

1. CoverKids

Qualifying families in Tennessee have been able to receive comprehensive health insurance since 2007 through CoverKids, which serves children in families who do not qualify for TennCare but cannot afford private health coverage. Administered by BlueCross BlueShield of Tennessee, the program covers children whose families earn within 250 percent of the federal poverty level (FPL), which was \$60,750 per year for a family of four in 2016, as well as providing unborn/maternity coverage through Healthy TNBabies. CoverKids had 70,493 members enrolled as of June 30, 2016.

2. AccessTN

Enrollment in AccessTN has been closed since October 31, 2013. Effective January 1, 2015, AccessTN members were transitioned to an off-Marketplace, individual health plan administered by BlueCross BlueShield of Tennessee. The premiums for these individual health plans are paid for by the State for members who continue to be eligible for the AccessTN program. AccessTN had 239 members as of June 30, 2016.

E. Pharmacy Assistance

1. CoverRx

CoverRx is the state's pharmacy assistance program for Tennesseans who do not have prescription drug coverage. Only individuals below the federal poverty level are eligible for CoverRx benefits. With a Covered Drug List of more than 200 generic medications, as well as brand name insulin and diabetic supplies, CoverRx provides affordable medications to those who may otherwise be unable to fill prescriptions. Qualifying CoverRx members pay no monthly premiums and only low co-pays for a 30-day or 90-day (if through mail order) supply of medications listed on the Covered Drug List. Each member has a five prescription-per-month limit; however insulin and diabetic supplies are not included in the limit.

²Due to amalgam of data sources for FY08-09, data was extracted from IAP vendor FY 09-10 data, less the new patients enrolled

³Data from IAP vendor annual report

There is also a discount portion to the program for select brand name and controlled substance products which are not included on the Covered Drug List. The member pays full price for the prescription less a flat discount.

CoverRx has always included members of the Behavioral Health Safety Net population, who may receive certain specific brand name mental health medications through the discount portion of the program.

CoverRx had 31,483 members as of October 31, 2016.

III. SUMMARY

The Tennessee Department of Health has assessed the state of the healthcare safety net in Tennessee and evaluated "the array of services, adequacy of services, and access to care." The assessment shows a comprehensive approach for healthcare safety net services both long and short term through a strong collaborative effort among state, public/private, not-for-profit and for-profit sectors.

Specifically, the conjoined effort among all Health Care Safety- Net provider types resulted in a total of 514,520 medical encounters provided to uninsured adults in FY16. This is a slight decrease of 4% compared to the previous year. FY16 Safety-Net utilization stratified by provider type reveals the following metrics in comparison to FY15:

- Community Health Centers (CHC) or Federally Qualified Health Centers (FQHC), excluding the 16 Local Health Departments (LHD) designated as an FQHC provided 195,435 medical encounters, a 13.2% decrease from FY 15
- 16 Local Health Departments (LHD) designated as an FQHC provided a total of 41,121 medical encounters, a 7% increase since last year.
- 40 Local Health Department Primary Care sites not designated as an FQHC provided 101,572 medical encounters, an 11% decrease from FY15
- Community & Faith Based (CFB) providers performed 176,392 medical encounters, a 10% increase compared to the previous year.
- Emergency Dental Providers performed 23,857 extractions, an increase of 26% from FY 15.

Safety Net appropriations have proven invaluable to hundreds of thousands of Tennesseans caught in a changing health care landscape of hospital closures, changes in availability, cost and coverage of insurance products, and continuing shortages of primary care in selected communities. Access to preventive care, primary care and care coordination services is pivotal to providing quality healthcare to the uninsured adult population in underserved communities.

GLOSSARY OF TERMS

Department - The Tennessee Department of Health.

FQHC – Federally qualified health centers. The centers are public and private non-profit clinics that meet certain criteria under the Medicare and Medicaid programs and receive federal grant funds under the Health Center Program, established at Section 330 of the Public Health Service Act (PHSA). Some target specially defined populations such as migrant and seasonal farmworkers or homeless persons, while others target a general community and are commonly referred to as "community health centers." These facilities meet the requirements of 42 U.S.C. § 1396d(l)(2)(B) and 42 U.S.C. § 254b.

FQHC Look-Alike – Federally qualified health centers-funded health centers that are public and private non-profit clinics that meet certain criteria under the Medicare and Medicaid program but do not receive federal grant funds under section 330 of the public Health Services Act (PHSA). Some target specially defined populations such as migrant and seasonal farmworkers or homeless persons, while others target a general community and are commonly referred to as "community health centers." These facilities meet the requirements of 42 U.S.C. § 1396d(l)(2)(B)(iii) and 42 U.S.C. § 254b.

Health Care Safety Net for Uninsured – Pursuant to Tenn. Code Ann. §71-5-148(a) The health care **safety net** program provides funding in support of medical and dental assistance to uninsured adults, 19-64 years of ages.

Health Care Safety Net Funds - State funding set aside by Tenn. Code Ann. § 71-5-148 to expand and augment Tennessee's health care safety net.

Health Care Services - as applied to FQHC's by Tenn. Code Ann. § 71-5-148(2) means the same as "Primary Care" and "Required Primary Health Services" and "Behavioral Consultations" as applied to FQHC's by 42 U.S.C. § 254b and incorporated in 42 U.S.C. § 1396d(1)(2)(B).

Health Professional Shortage Area (HPSA) - Federally designated county, parts of a county(such as a census tract), or public facility recognized as meeting or exceeding the standards of need for certain services. Primary care HPSA status is a national measure used to denote difficulties in access to care. A HPSA must meet or exceed the following thresholds:

- For a Geographic designation, the population to physician ratio is greater than 3,500:1.
- For a population designation, a segment of the population experiencing barriers to care and a population to physician ratio that is greater than 3,000:1.
- For a facility designation, a public or private nonprofit medical facility is providing primary medical care services to an area or population group designated as having a shortage of primary care professional(s), and the facility has insufficient capacity to meet the primary care needs of that area or population group. A community health center or homeless clinic is an example of such a designation

Medical Encounter - a day on which a primary care provider meets with an uninsured adult regardless of the number of procedures performed or the number of primary care providers who see the uninsured adult.

Medically Underserved Area (MUA) – Federal designations that involve the application of the Index of Medical Underservice (IMU) to data on a service area to obtain a score representing the completely underserved to the best served. Under the established criteria, each service area found to have an IMU score of 62.0 or less qualifies for designation as an MUA.

Medically Underserved Population (MUP) – Federal designations that involve the application of the Index of Medical Underservice (IMU) to data on an underserved population group within an area of residence to obtain a score for the population group.

Primary Care Provider or PCP - a physician, licensed psychologist, licensed clinical social worker, nurse practitioner, certified nurse midwife, or physician assistant actively licensed to practice in Tennessee.

Sliding Scale - rates charged to an uninsured adult on the basis of 42 U.S.C. § 254b(k)(3)(G) and 42 C.F.R. § 51c.303(f).

Uninsured Adult - a patient aged nineteen (19) through sixty-four (64) years who is uninsured pursuant to Tenn. Code Ann. §71-5-148(a).

Unduplicated Uninsured Adult Patient- a patient is counted only once for each type of service, even if patient received services on multiple occasions during the grant period.
